Agricultural Resource Conservation Program
2-CRP (Revision 5) Amendment 17

Approved by: Deputy Administrator, Farm Programs

Amendment Transmittal

A Reason for Amendment

Subparagraph 151 D has been amended to:

- be consistent with the technical correction to 7 CFR 1410.6
- provide that land under other easements, or other legal restrictions, that require a resource-conserving cover be maintained throughout any part of the proposed contract period is ineligible to be re-enrolled into CRP.

Amendment Transmittal

A Reasons for Amendment

Subparagraphs 35 A, 131 C and E, and 401 A and B have been amended to include references to CCC-933.

Subparagraph 66 B has been amended to provide the CRP practices available for general signup 45.

Subparagraph 66 D has been amended to correct that SIP for CP33 is $15.

Subparagraph 101 A has been amended to provide that the maximum weighted average SRR for general signup offers is $240 per acre. There is no limitation for the calculated maximum payment rate for continuous signup offers, including CREP and FWP.

Subparagraph 151 D has been amended to remove that land under other easements, or other legal restrictions, that require a resource-conserving cover be maintained throughout any part of the proposed contract period, is ineligible to be offered for CRP. This statement was added inadvertently in Amendment 15.

Subparagraph 293 B has been amended to correct the EBI point ranges for Factors N1 and N5. There are no zero point values for either factor.

Subparagraph 335 C has been amended to provide that if land has non-Native American owners who are unknown, CRP-1 may be approved without the non-Native American owners’ signatures if the total non-Native American owner share is 25 percent or less.

Subparagraph 339 B has been amended to provide that omitted records include any timely filed signup 45 offer not successfully loaded and/or submitted by the end of signup, COB June 14, 2013, or COB June 21, 2013, where County Offices used a register.

Subparagraph 339 C has been amended to provide that all signup 45 erroneous and omitted offers must be processed by COB September 6, 2013, with the exception of offers determined eligible through the appeals process.
A Reasons for Amendment (Continued)

Subparagraph 402 C has been amended to provide that for signup 45, the effective date of CRP-1 shall be October 1, 2013, for either of the following:

- new land
- acreage that is currently enrolled in CRP at the time of signup that expires on September 30, 2013, and is re-enrolled during signup 45.

Subparagraph 461 E has been removed because information on multi-county producers is no longer applicable.

Subparagraphs 462 C through E have been amended to remove the program code for SIP, PIP, and WRI. The program code found in 1-FI should be used to make SIP, PIP and WRI payments.

Subparagraph 546 J has been amended to provide the new date for the updated CRP-1 Appendix. The new date is May 7, 2013. CRP-1 Appendix will apply to all continuous signup 44 and general signup 45 contracts.

Subparagraph 691 G has been amended to provide that if a county has a value in the “D2” column, the county is eligible for STC approval of emergency haying and grazing.

Exhibit 20 has been amended to update the CRP signup period table to include signup 44 and signup 45 signup dates and program years.

Exhibit 26 has been amended to update EBI from signup 43 to signup 45. No other changes to EBI were made.

Exhibit 29 has been amended to provide an example of the revised CRP-1 Appendix to include language at 4 A (10) about how PIP and SIP are attributed for payment limitation purposes.

Exhibit 61, subparagraph C has been amended to indicate that payment amounts can be recorded for 2012, 2013, and 2014. County Offices can record payment amounts for 2012, 2013, and 2014, but they will not be processed and sent to NPS until the payment due date.

Note: A forthcoming Information Bulletin will be issued when the software is installed to allow entry of TIP payment information for 2013 and 2014.

Exhibit 62 has been added to provide information about:

- the TIP SharePoint site
- requirements for reporting TIP contract modifications.

Amendment Transmittal

A Reasons for Amendment

Subparagraph 66 C has been amended to add CRP practice CP42 to the continuous signup practice list.

Subparagraph 66 D has been amended to:

- reflect the eligible SIP payment amounts per acre for practices CP5A, CP8A, CP16A CP17A, CP21, CP22, CP23, CP23A, CP27, CP28, CP29, CP30, CP31, CP33, and CP42
- clarifying policy about incentives for CREP.

Subparagraph 131 E has been amended to clarify policy for AGI provisions for continuous CRP-1’s approved between May 13, 2002, and September 20, 2002.

Subparagraph 197 A has been amended to add:

- continuous practice CP42 to the list of eligible practices to receive SIP
- the $15/acre SIP amount for practices CP23, CP23A, CP33 and CP42.

Subparagraph 197 B has been amended to add references to CREP.

Subparagraph 213 E has been amended to correct dates and clarify policy in the example about CRP-1 continuous signup period.

Subparagraph 401 A has been amended to remove the language about adjusting the value of CRP-1 because of payment limitation.

Paragraph 461 has been amended to clarify policy for CRP payment limitation.

Paragraph 462 has been amended to add an exception for CREP.
A Reasons for Amendment (Continued)

Subparagraph 637 F has been amended to clarify the nonpayment period.

Subparagraph 691 D has been amended to clarify policy for emergency haying and grazing.

Subparagraph 693 A has been amended to clarify contiguous CRP fields for emergency haying and grazing general provisions.

Subparagraph 742 A has been amended to clarify that emergency haying or grazing activity restarts the frequency clock.

Subparagraph 771 A has been amended to clarify policy about changes to agreements.

Exhibit 11 has been amended to:

- remove CP27 references to Final National Inventory Map and USGS map
- remove CP31 allocation tables
- update CP33 total acreage enrollment cap and remove allocation table
- update CP36 total acreage enrollment cap and remove allocation table
- update CP37 total acreage enrollment cap and remove allocation table.

Exhibit 31 has been withdrawn because of obsolete policy.

Agricultural Resource Conservation Program
2-CRP (Revision 5) Amendment 14

Approved by: Acting Deputy Administrator, Farm Programs

Amendment Transmittal

A Background

Software has been developed that allows County Offices to record TIP payment information in the web-based system for issuance to producers eligible for 2012 payments beginning October 2012.

Software is projected to be released on or about September 7, 2012.

B Reasons for Amendment

Exhibit 60 has been added to provide general payment processing information for TIP.

Exhibit 61 has been added to provide procedure for recording TIP payments in the web-based system.

Amendment Transmittal

A  Reason for Amendment

Subparagraph 691 E has been amended to add that for emergency haying, county eligibility is based on COC submitting evidence that the county is designated as level “D2 Drought-Severe” according to the U.S. Drought Monitor.

Note:  All other provisions of paragraph 691 apply.

Amendment Transmittal

A Reasons for Amendment

Paragraph 131 has been amended to:

- provide that all producers with a share greater than zero must provide a certification of average AGI before CRP-1 is approved
- add AGI tables to provide further clarification for CRP.

Subparagraph 181 F has been amended to provide examples of expiring CRP-1’s eligibility for CREP enrollment.

Subparagraph 181 G has been amended to provide criteria for expiring CRP-1’s that are not eligible for CREP enrollment.

Subparagraphs 214 A, 215 B, 286 B, 332 A, and 337 A have been amended to remove “paid for” from measurement services.

Paragraph 401 has been amended to:

- provide that the use of TERRA is considered a measurement service

  Note: No measurement service fee is charged for the use of TERRA. If staking and referencing or in office measurement, other than TERRA, is performed, see 2-CP, paragraph 460, for fees.

- provide that before approving CRP-1’s, County Offices shall ensure that CCC-931 has been filed for all producers with a share greater than zero and updated in the subsidiary file
- approve CRP-1’s if the current CCC-931 has been filed for all producers with a share greater than zero and updated in the subsidiary file.
A Reasons for Amendment (Continued)

Subparagraph 491 C has been amended to remove the incorrect exception that references SIP.

Paragraph 554 has been amended to provide provisions for FRPP when transferring land from CRP.

Paragraph 575 has been amended to provide that refunds of SIP and PIP are required when participants CRP-1 is terminated to enroll the acreage in a State conservation program, WRP, FRPP, EWP Floodplain Easement, GRP, and HFRP.

Subparagraph 630 A has been amended to reference FRPP when transferring land from CRP.

Paragraph 633 has been amended to:

- clarify policy limitations for recreational hunting on CRP
- provide that, for acreage in CRP, barrier fencing or boundary limitations that prohibit wildlife access to or from the CRP acreage is *not* allowed.

Paragraph 637 has been amended to remove the restriction that burning is not an authorized method of destruction of the cover.

Exhibit 35 has been amended to provide CCC-770 CRP1.

Amendment Transmittal

A  Reason for Amendment

Conservation District and NRCS staff are reminded that changes made in this amendment as described below are identified on each amended page with *-- before and --* after the revised wording.

Subparagraph 66 C has been amended to add guidance on the Highly Erodible Land Initiative (HELI) and CP33, Habitat Buffers for Upland Birds.

Subparagraph 181 F has been amended to clarify the provisions concerning land and SIP eligibility for CRP/CCRP land re-enrolled in the continuous CRP.

Subparagraph 196 K has been added to provide that the State will provide matching 50% cost sharing, up to the limits in paragraph 512, for mid-contract management activities on CREP contracts.

Subparagraph 197 A has been amended to remove guidance on SIP payments to the “combined state entity” since these provisions only applied to contracts approved before October 1, 2008, and to clarify that contracts containing land previously enrolled in any form of CRP are not eligible for SIP.

Subparagraph 499 C has been revised to update the use of the AD-245 for CREP to the FSA-848B.

Subparagraph 508 A has been added to clarify the provisions for NRCS to complete practice implementation inspections on a portion of those reported each fiscal year.

Subparagraph 576 B has been amended to add an omitted paragraph number referenced in the Example.

Subparagraph 601 B has been added to clarify the provisions for NRCS to complete annual status reviews on a portion of the CRP contracts without a final status review each fiscal year.
Amendment Transmittal (Continued)

Subparagraph 634 has been amended to correct the guidance concerning race tracks near or within CRP acreage.

Paragraph 637 has been added to incorporate the STC policy in WA CRP-101 prohibiting burning in the last year of the CRP contract except as authorized under the national early land preparation provisions.

Exhibit 11 has been amended to:

- add guidance on the CP33 practice in Washington
- add the CP38A and CP38E practices authorized for the Ferruginous Hawk SAFE project.

WA Exhibit 2 has been added to provide guidance, which may be shared with producers during a general signup, on the items NRCS considers when determining if an existing CRP stand is adequate or will required enhancement to meet a re-enrolled offer.

WA Exhibit 4 has been amended to:

- revise some of the provisions for legume/forb plantings in strips or blocks
- revise the CP1 and CP2 mixes provided by NRCS to reduce the required Big bluegrass pounds of seed

**Note:** NRCS made these changes for SU45.

- add alfalfa as an approved species for CP12 practices
- add the CP38A and CP38E practice specifications for the Ferruginous Hawk SAFE

WA Exhibit 5 has been amended in:

- subparagraph 5 F to provide the STC policy in WA CRP-101 prohibiting burning in the last year of the CRP contract except as authorized under the national early land preparation provisions
- subparagraph 5 J to clarify that riparian buffer practices can utilize any of the mid-contract management practices listed in the exhibit as well as those listed in this subparagraph, if approved by NRCS/TSP and COC.
Amendment Transmittal (Continued)

WA Exhibit 19 has been amended:

- to update all approved component codes from the AD-245 software to those approved for CSS
- to add component MgmtThin2 for mid-contract management on practices other than riparian buffers
- in subparagraph 6 A to clarify that the prior component for unique seedbed preparation circumstances, SB14, has been replaced by SeedbedX where X is a sequential number assigned to a component established for each office
- in subparagraph 6 B to clarify that the prior component for unique site preparation circumstances, S101, has been replaced by SitePrepX where X is a sequential number assigned to a component established for each office
- in subparagraph 7 to reference the FSA-848 forms
- to add paragraph 9 with clarifications on the conversion to component codes for CSS as well as procedures to request the establishment of components based on “50% of the actual cost not to exceed an amount determined by the COC” in CSS

WA Exhibit 24 has been amended:

- to update all approved component codes from the AD-245 software to those approved for CSS
- to add component WeedCntrX for post-plant weed control by biological control
- in subparagraph 5 A to clarify that the prior component for unique seedbed preparation circumstances, SB14, has been replaced by SeedbedX where X is a sequential number assigned to a component established for each office
- in subparagraph 5 B to clarify that the prior component for unique site preparation circumstances, S101, has been replaced by SitePrepX where X is a sequential number assigned to a component established for each office
- in subparagraph 6 to reference the FSA-848 forms
- to add paragraph 7 with clarifications on the conversion to component codes for CSS as well as procedures to request the establishment of components based on “50% of the actual cost not to exceed an amount determined by the COC” in CSS

WA Exhibit 25 has been amended to provide instructions on reporting State cost share and PIP loan information on the FSA-848B form.

WA Exhibit 29 has been amended to reference the FSA-848B form instead of the AD-245.

WA Exhibit 33 has been amended to add the Ferruginous Hawk SAFE project.

A Reason for Amendment

WA Exhibits 19 and 24 have been amended to replace cost share component SD27 for native grass, legume and forb seed mixes with SD32 with a higher hold down to account for recent increases in native seed costs. Seed cost sharing previously approved using component SD27 may be paid using SD32 in accordance with paragraph 498 B.
Amendment Transmittal

A Reason for Amendment

Paragraph 634 is being amended to include the revised STC policy that prohibits the partial withdrawal land from CRP for use as any form of race track or the enrollment of land around an existing or intended race track.

WA Exhibit 11 is being amended to clarify the payment limitation example provided.

WA Exhibits 19 and 24 have been amended to:

- replace component CA13 with component CA30 to reflect a higher cost sharing rate for harrowing an existing grass stand

- replace component MMT1 with component MMT3 to reflect a higher cost sharing rate for harrowing a stand for mid-contract management

WA Exhibit 19 has also been amended to correct the cost share rates for components S15 through S19 to reflect the correct cost share holddown for riparian buffer site preparation. The corrected rates reflect the rates provided in WA Exhibit 24.

WA Exhibit 24 has also been amended to add component MMT2 for light tillage under mid-contract management, which was previously omitted from the exhibit.

Amendment Transmittal

A Reason for Amendment

The handbook is being amended to correct the guidance in WA Exhibit 11. All direct and indirect 1-PL earnings of a combined “person” are not attributed in their entirety to each member of the combined “person” when determining potential direct and indirect 4-PL earnings.

Exhibits 19 and 24 have been amended to:

- revise the “CA” components to simplify the wording and eligible practices and list them in a more logical manner

- Add component CA29 and correct the rate provided for this component in WA CRP-97.

Agricultural Resource Conservation Program
2-CRP (Revision 5)  Washington Amendment 5

Approved by: State Executive Director

rdh

Amendment Transmittal

A Correction

WA Amend. 4 was accidently issued without the proper page alignment for filing. In addition, one page that should have been on the back of an amended page was omitted. All pages included in WA Amend. 4 should be removed from the handbook and replaced with the pages included in this amendment. Our apologies for the inconvenience.

B Reason for Amendment

Paragraph 66 has been amended to correctly reflect the nationally authorized rental maintenance rates for CREP practices.

Exhibit 11 has been amended to further clarify when expiring CP15A and CP21 practices can be re-enrolled in continuous CRP.

WA Exhibit 4 has been amended to correctly reference national Exhibit 11 for state supplements to national CP practice descriptions.

WA Exhibit 6 has been amended to remove a restriction only allowing 50% of a field to be hayed under managed haying.

WA Exhibit 7 has been amended to remove a restriction prohibiting burning April 1 to August 15 when used for initial stand establishment. This restriction continues to apply for mid-contract management.
C Electronic Version of Handbook

WA Exhibit 19 has been amended to:

- add component CA29, which was previously provided in WA Notice CRP-97, for herbicide application as a part of initial stand enhancement
- add component S21 for rigid mess tube or netting tree protectors, which was mistakenly omitted from the exhibit.

WA Exhibits 19 and 24 have been amended to provide updated tree and shrub cost sharing rates and replace components TS14-TS19 with components TS20-TS23.

Note: Tree and shrub species are grouped within the 4 new components differently than in the past, so offices need to closely review which species are included in each component.

After issuance of this amendment, the electronic version of 2-CRP including state and national pages will be amended to include all of the most current state and national amendments. The electronic handbook is maintained on the state Share Point under Programs, CRP, Shared Documents.

Agricultural Resource Conservation Program
2-CRP (Revision 5)

Washington Amendment 3

Approved by: State Executive Director

rdh

Amendment Transmittal

A Background

The handbook is being amended to correct typos in WA amendments 1 and 2 and to add procedure on the applicability of 1-PL and 4-PL payment limitation provisions to CRP.

B Reason for Amendment

Paragraph 576 has been amended to clarify that the COC’s authority to waive CRP refunds is limited to cases where the total refund due is $10,000 or less, regardless of the amount the COC wishes to waive.

Exhibit 26 has been amended to correct the criteria under which N1b points can be earned for converting 51% of a vegetative monoculture to a 50 point native mix. The existing monoculture does not have to make up 51% of the offered acreage.

Paragraph 639 has been amended to clarify use of spot treatment approvals when wind turbines will be constructed during the primary nesting season and to remove the requirement that the SEC must approve the FSA -850s for wind turbine installations.

WA Exhibit 4 has been amended to:

- correct the page numbering chart on page 1
- incorporate NRCS guidance on minimum seeding rates for practices CP1, CP2, CP4B and CP4D
- provide State-developed stocking or planting rates for CP3

WA Exhibit 11 has been added to provide guidance and examples on the application of payment limitation provisions to producers with CRP contracts subject to both 1-PL and 4-PL provisions.
Amendment Transmittal (Continued)

WA Exhibit 33 has been amended to correct the current acreage allocation for Washington’s SAFE projects and to remove the Coastal Elk SAFE since this project is no longer available.

All other pages changes were minor edits to address typographical errors.

</table>
A Background

WA Amendment 1 to this handbook only added a portion of the state policy previously contained in 2-CRP (Rev. 4). This amendment brings the rest of those policies forward to this handbook. Counties should no longer use any pink pages in 2-CRP (Rev. 4) and the handbook should be obsoleted.

The bulk of the pages in this amendment contain no or only minor changes from the policy contained in 2-CRP (Rev. 4). Where no changes have been made, the *-- --* used to identify changes have not been used. The limited number of pages with the *-- --* symbol reflect new or changed policy from 2-CRP (Rev. 4). Changes from the prior handbook are also identified below.

Although this amendment is large, County Offices are encouraged to review the procedure included to review the state policies included in 2-CRP.

B Reason for

This handbook is being amended to add procedure from 2-CRP (Rev. 4) to 2-CRP (Rev. 5) with applicable updates.

C Electronic Version of Handbook

After the issuance of this amendment, the State Office will attempt to insert the Washington pink pages in an electronic version of 2-CRP and place it on the state Share Point. Counties will be notified if this effort is successful.
Amendment Transmittal (Continued)

D Changes from Revision 4

Paragraph 130 has been amended to provide guidance on the process when the County Office receives a request to remove a tenant from a CRP-1.

Paragraph 181 has been amended to provide additional guidance on when land re-enrolled in a practice eligible for SIP can earn that payment.

Paragraph 339 has been amended to provide guidance on materials to submit to the State Office before a general signup offer can be approved under error and omissions policy.

Paragraph 427 has been amended to provide that, in the absence of a final status review, County Offices shall assume a stand is established following the third growing season after planting, and activities during the primary nesting season are prohibited thereafter.

Paragraph 510 has been amended to provide that when a participant submits invoices for stand establishment costs from an entity in which any participant on the contract has a substantial beneficial interest, as defined in subparagraph 215 C of 1-PL, the participants shall be required to submit the underlying costs and cost sharing shall be limited to the COC’s rates for personal labor and equipment.

Paragraph 576 has been amended provide guidance for COCs and the STC when they consider requests to waive refunds.

Paragraph 634 has been amended to clarify that COCs shall not approve motocross or other race tracks within or adjacent to CRP.

Exhibit 11 has been amended to:

- provide guidance when CP15A and CP21 acreage is offered for re-enrollment and some of the buffers are eligible to be re-offered as the continuous CRP practice and some are not due to their inclusion in expiring general CRP contracts
- remove all references to Zones 1, 2 and 3 in state guidance on the CP22 practice
- specify the CP22 practice cannot be installed through natural regeneration in Washington unless approved in advance by the State Office.

WA Exhibit 4 has been amended to:

- correct the table of contents on page 1
- add new seed mix matrices for CP1, CP2, CP4B/CP4D and CP42 approved by NRCS for signup 41 and later
- add CP38 example specification sheets for all SAFE CP38 practices
Amendment Transmittal (Continued)

D Changes from Revision 4 (Continued)

WA Exhibit 5 has been amended to specify April 30 as the annual notification deadline to notify the applicable producers of the requirement to conduct mid-contract management.

WA Exhibit 6 has been amended to remove an unnecessary restriction limiting managed haying to 50% of a field since this provision was not included in the Environmental Assessment conducted for managed haying and grazing.

WA Exhibit 8 has been amended to require a density of 0.8 plants per square foot for an adequate stand to be consistent with current NRCS policy.

WA Exhibit 9 has been added to provide STC policy on CRP spot check requirements beyond the national spot check selection. This procedure was issued in a prior year by notice.

WA Exhibit 10 has been added to provide state policy on notifying producers for a contract succession involving a change in participants.

WA Exhibit 19 has been amended to:

- to add component CA28 for a light application of herbicide to control annual grass at the time of re-enrollment of an established grass stand
- revise component MMH6 to cover mid-contract management by spraying around trees for multiple practices, not just buffers, and to add practice CP25
- correct duplicate S34 components for spot treatment for site preparation and shade cards and change the component code for shade cards to S35
- add component TH1 for thinning existing stands of trees at the time of re-enrollment to meet practice specifications
- add component TH2 for clearing openings in existing stands of trees at the time of re-enrollment

WA Exhibit 24 has been amended to:

- to add component CA28 for a light application of herbicide to control annual grass at the time of re-enrollment of an established grass stand
- correct the cost share holddown for component LPW1
- revise component MMH6 to cover mid-contract management by spraying around trees for multiple practices, not just buffers
- correct duplicate S34 components for spot treatment for site preparation and shade cards and change the component code for shade cards to S35

Although WA Exhibit 27 was removed with WA Amendment 1, counties are reminded that the manual register of CREP contracts, and the requirement to submit it to the State Office annually, has been removed from the handbook. Total CREP enrollment is now monitored electronically. Copies of CREP CRP-1s and CRP-2s should continue to be submitted to the State Office at contract approval.

1 Amendment Transmittal

A Background

2-CRP (Rev. 5) was issued to replace 2-CRP (Rev. 4). State amendments from Revision 4 are being added to Revision 5.

This amendment contains most state exhibits. State amendments to national paragraphs and national exhibits will be added in Washington amendment 2 which will be issued shortly. When all state amendments have been issued, the entire document will be placed on the state intranet site.

If County Offices find instances where they feel guidance is missing or needs correction, or additional clarifications are needed, please report this to the Farm Program Chief for inclusion in Amendment 2.

Because all of this material is a new addition to Revision 5, changes are not highlighted with *--*--*. The number of changes from the procedure currently in Revision 4 is limited, and they are described in subparagraph C. WA Exhibits not mentioned in subparagraph C have no changes from Revision 4.

B Reason for Amendment

The handbook is being amended to add procedure from 2-CRP (Rev. 4) to 2-CRP (Rev. 5) with applicable updates.
1 Amendment Transmittal (Continued)

C Changes from Revision 4

WA Exhibit 1 has been revised to clarify that FSA and NRCS shall not approve a variance from normal cover establishment requirements unless they concur it is likely to succeed.

WA Exhibit 2 is not being issued at this time to allow NRCS to determine if 2-CRP is still the appropriate format to issue this guidance.

WA Exhibit 4 does not include the practice specifications for the various CP38 practices authorized throughout the state’s SAFE projects. These will be added in the next amendment. As in the past, the applicable CP38 practices will only be printed for those counties included in the SAFE Project Area. This exhibit has also been revised to:

- include the CP42 specifications issued in WA Notice CRP-96
- place the specifications for use exclusion and wildlife watering facilities at the end.

WA Exhibit 5 has been revised to incorporate:

- guidance related to the current nesting season and spot treatment
- add instructions from WA Notice CRP-89 about reminding producers of mid-contract management requirements and acting on requests for waivers
- a suggested letter for informing producers of the mid-contract management requirement.

WA Exhibit 6 has been revised significantly to update managed haying and routine grazing provisions to reflect the provisions of the Environmental Assessment and show currently approved grazing periods. The provisions of WA Notice CRP-91 are incorporated as applicable. Employees should closely review the provisions of this exhibit before publicizing or approving managed haying or routine grazing from this point forward. Many counties approved grazing periods were altered slightly to conform to existing grazing policy.

WA Exhibit 8, page 1, concerning stand certification, has been revised to describe current use of this policy and to clarify that absent a field inspection by NRCS, TSP or FSA, or a producer self-certification, stands should be considered established no later than the third growing season after planting.

WA Exhibit 14 containing an annual letter to participants has been eliminated since newsletters can accomplish this notification at a more reasonable cost and workload.

WA Exhibit 15 concerning land values for determining 50% of the agricultural value of land for general signup practice cost share limits has been eliminated. When applicable, COCs shall determine this value on a case by case basis.
C Changes from Revision 4 (Continued)

WA Exhibits 19 and 24 have been revised to:

- remove the authority for COCs to waive the tree and shrub cost share holddowns
- add guidance on page 6 that even though CP38 (SAFE) practices are not listed as Applicable Practices for any component, County Offices should use the CP practice the CP38 is based on (i.e., CP2 or CP4D) to determine the applicable eligible components for that practice (Not applicable to WA Exhibit 24.)
- incorporate the component codes contained in WA Notice CRP-95 and WA Notice CRP-96
- add components for a second implementation of the same component so both can be entered on the same AD-245:
  - CA25 is added for a second mowing after use of component CA22
  - CA26 is added for a second chemical application after use of component CA20
  - CA27 is added for a second mechanical weed control after use of component CA21
  - SG16 is added for a second conventional seeding after use of component SG14
  - SG17 is added for a second no-till seeding after use of component SG15
- replace the livestock water development components with LWC1, LWD1, LWF1 and LWP1 to account for the increased national holddown rates included in Revision 5
- replace component CA19 with CA24 to provide a higher cost share rate for post-plant, spot treatments of weeds around trees/shrubs
- remove component SD12 for critical area seeding
- add snowbrush and western larch as eligible species for component TS17

WA Exhibit 22 concerning the flow of CREP applications has been eliminated since counties have developed a local process to accomplish this work.

WA Exhibit 26 has been revised to more accurately reflect the current process to nominate additional stream segments for CREP eligibility.

WA Exhibit 27 concerning the annual reporting of CREP contract approvals has been eliminated since enrollment is significantly below the 100,000 acre program cap.

WA Exhibit 28 concerning notification to participants that all CREP cost sharing has been issued and future reimbursement for maintenance will be solely through the Conservation District has been eliminated. County may develop their own notification is needed.

32  Joint FSA/NRCS/WCC Guidance Clarifying Agency Roles for Cultural Resources on CRP/CREP
Part 1    Basic Provisions

1     Overview

2     Implementing CRP

A     Introduction

Except as specifically provided in WA amendments to this handbook, the WA CREP and WA SAFE program provisions are the same as provided in the national procedure in this handbook.
1 Overview

A Handbook Purpose

This handbook provides CRP policies and instructions to FSA State and County Offices and NRCS Regional, State, Area, and Field Offices for:

- adhering to general provisions and carrying out FSA responsibilities
- maintaining useful life easements
- approving CRP-1’s
- making annual rental payments
- performing other CRP activities
- C/S policies.

2 Implementing CRP

A Introduction

This part provides the following:

- CRP:
  - sources of authority
  - objective
  - emphasis

- a list of related handbooks

- information on:
  - voluntary participation
  - CRP forms
  - who shall have access to farm and farm records
  - relief actions
  - restrictions on lobbying activities.

B Voluntary Participation

A producer who purchases land enrolled in CRP shall **not** be required to participate in CRP.
3 Authority, Program Objective, and Emphasis

A Sources of Authority

Sources of authority for CRP are:

- the Food Security Act of 1985, as amended
- 7 CFR Part 1410
- annual appropriations acts.

B CRP Objective

CRP’s objective is to cost-effectively assist owners and operators in conserving and improving the nation’s natural resource base.

C CRP Emphasis

CRP is a natural resource program that:

- protects the nation’s soil, water, and wildlife resources
- improves and preserves water quality
- enhances fish and wildlife habitat
- addresses issues raised by State, regional, and national conservation initiatives.
3 Authority, Program Objectives and Emphasis

A Sources of Authority

CCC’s sources of authority for CREP are Sections 1230, 1234 and 1242 of the Food Security Act of 1985, as amended (16 U.S.C. et seq.) and 7 CFR Part 1410.50.

Washington’s authority for CREP is provided in RCW 43.06.120, Laws of Washington.

B Sources of Authority

CRP regulations authorize CCC to enter into agreements with States to use the CRP in a cost-effective manner to further specific conservation and environmental objectives of a State and the nation. This forms the basis of the CREP.

C CREP Emphasis

The Washington CREP provides authority for continuous enrollment of up to 100,000 acres in CRP under practice CP22, Riparian Buffer, CP22, Hedgerow, CP21, Grass Filter Strip, CP23, Wetland Restoration, CP23A, Wetland Restoration, Non-Floodplain, and CP30, Marginal Pastureland Wetland Buffer.

The CREP offers special incentive payments as a percentage of the per-acre maximum annual rental rate otherwise applicable to the acreage being offered. See paragraph 196.

Cost share reimbursements for CREP conservation practices will be:

- 50 percent from CCC
- 10 percent from Washington State, through Conservation Districts

Washington State will provide payments equal to 100 of the cost of maintenance, after stand establishment, for up to 5 years.

CRP-SIP and PIP will also be paid on CREP CRP-1’s.

The following provides web sites for guides related to CRP.

<table>
<thead>
<tr>
<th>Web Site</th>
<th>Guide</th>
</tr>
</thead>
</table>
C Using Forms

Use National forms for the CREP unless otherwise specified.

Any new forms or modifications to existing USDA, CCC or FSA forms that producers are required to sign require Office of General Counsel (OGC) and Office of Management/Budget (OMB) approval and clearance.

FSA form AD-245, page 2, Practice Approval and Payment Application, will be used to transfer the CREP State cost share payment and PIP Advance Loan amount from FSA to Conservation Districts and from Conservation Districts to the Conservation Commission.

Feet of stream bank enrolled shall be reported on CRP-2.
B Adding or Withdrawing Provisions

State supplements to the handbook shall not be less or more restrictive than the provisions of this handbook; however, State-specific amendments may be made that are consistent with CRP provisions. For permanent directives, the following guidelines must be followed:

- issue a permanent State Office directive only as a supplement to this handbook

  Note: Do not create a separate State handbook.

- do not rewrite or elaborate on unclear or incomplete national instructions

- do not modify national wording when adding supplemental information.

State Offices may supplement these handbook instructions according to 1-AS.

Note: Periodically, the National CRP Program Manager may select State amendments for review.

C Using Forms

Use national forms when applicable.

Other forms used for CRP may be:

- modified, according to the applicable exhibits
- developed as needed
- submitted for clearance and approval according to 3-AS.
Access to Farm and Farm Records, Relief Actions, and Appeals

A Access to Farm and Farm Records

Authorized representatives of the Secretary shall have access to farm and farm records to:

- make eligibility determinations
- determine compliance with this handbook’s provisions.

B Procedure Waiver by DAFP

Unless prohibited by statute, DAFP may waive any provision in this handbook.

Exception: The waiver provision is not a substitute for:

- appeal provisions in 1-APP
- misaction or misinformation provisions in 7-CP.

C Request for Meritorious Relief

STC may authorize meritorious relief to an applicant based on a producer’s request, documented justification, and COC recommendation only within the authorities delegated to it by CRP-1 and attachments or this handbook.

COC may submit to STC fully documented requests for relief from complying with the CRP-1 terms and conditions.

Note: A COC written request submitted to STC for relief must describe the basis and justification for the request.

D Administrative Appeals

Handle all appeals, including appeals for technical determination made by NRCS or TSP, according to 1-APP.

CRP participants may request and receive a copy of the administrative appeal procedures in 1-APP.

Note: Items, such as formulas and SRR’s, that are applied generally to all producers are not appealable.

See CRP-35 (Exhibit 5) for notification of offer reconsideration because of redetermination.
6 Restrictions on Lobbying Activities

A Applicability

The disclosure requirements apply to all AD-245 applications for C/S payments filed and disbursed since December 23, 1989.

B Complying With Lobbying Disclosure Requirements

To comply with lobbying disclosure requirements, applicants for and recipients of a CRP C/S payment exceeding $100,000 must file, with the County Office, either of the following for each C/S payment that exceeds $100,000:

- CCC-674 (Exhibit 6), if they have not used or will not use monies received for lobbying purposes
- SF-LLL (Exhibit 6), if they have used or will use monies received for lobbying purposes.

Note: Complete SF-LLL-A (Exhibit 6) if needed.

C Providing Forms

Each time a single CRP C/S payment exceeds $100,000, County Offices shall:

- send a copy of CCC-674, SF-LLL, and SF-LLL-A to the recipient with instructions to complete and return the applicable form or forms to the County Office within 10 workdays
- if a response is not received within 10 workdays, request a refund of payment according to 58-FI.

Note: If an amount less than the C/S amount was repaid, send a demand letter, according to 58-FI, to collect the difference between full C/S repayment and the amount repaid.
6 Restrictions on Lobbying Activities (Continued)

D Forwarding and Filing Forms

County Offices shall:

- forward a copy of the completed forms to OAS, through State Offices and DAFO
- file the original of the completed forms in the County Office in folder entitled “CRP4 Contract Folders”.

E Disbursing Payments

County Offices shall not:

- disburse CRP C/S payments exceeding $100,000 until the applicant has returned the completed applicable form to the County Office
- issue multiple payments to avoid the requirements in subparagraph B.

F Unusual Situations

County Offices shall contact FMD, through State Offices and DAFO, for assistance if situations arise that are not covered in this paragraph.
A New Policy on Required Use of CCC-770 Checklists

CCC-770 checklists:

- are no longer required based upon policies and procedures issued previously by the National Office

- shall be considered as management tools to help address deficiencies identified by a review or spot check of whether program policies or procedures are being followed before issuing CRP payments

Note: A National Report providing for a State’s summary of the applicable CCC-770 checklists completed within the State is no longer required to be submitted to the National Office.

This policy does not negate STC, SED, State Office, DD, COC, and County Office responsibility for administering all provisions applicable before disbursing a program payment.

B Action

SED, STC or designee, DD, or CED shall determine:

- when County Offices are to complete CCC-770 checklists if apparent internal control deficiencies are found during CED, STC representative, or DD reviews

- whether the applicable CCC-770 checklist is necessary to avoid findings indicated by CORP reviews

- when additional internal controls are necessary to reduce improper payments.
Part 2 Responsibilities

Section 1 Agency Responsibilities

18 Responsibilities

A FSA Responsibilities

Washington FSA’s responsibilities for administration of CRP and CREP include:

- determining producer eligibility
- determining cropland and marginal pasture land eligibility
- administering all approved contracts
- calculating the total reimbursable costs eligible for FSA or State cost sharing
- paying 50 percent of the reimbursable cost of eligible conservation practices established
- making annual rental payments, including:
  - the normal CRP rates for land enrolled in CRP, including maintenance payments
  - the a rental incentive payment applicable to the enrolled practice (See paragraph 196).
- making CRP-SIP and PIP payments
- hearing appeals

B NRCS Responsibilities

In addition to their normal CRP requirements, NRCS will work with Conservation District employees to provide technical guidance and the development of job approval authority. NRCS or the Conservation District will report the feet of stream bank enrolled on CRP-2.
A  FSA Responsibilities

FSA shall administer CRP. Supervision shall be provided by:

- STC to COC
- COC to County Offices for the day-to-day CRP operations.

B  NRCS Responsibilities

NRCS will, as appropriate, participate in State-level technical determinations and policy reviews, such as evaluating soil payment rates, C/S policies, and other requirements.

C  NRCS and TSP Responsibilities

NRCS and TSP will:

- develop an approved conservation plan
- assist participants to ensure that practice specifications are met
- provide FSA with the following:
  - certification of practice completion
  - copy of completed annual status review
- through State Foresters:
  - develop the tree planting plan for:
    - inclusion in the approved conservation plan
    - approval of the Conservation District
Responsibilities (Continued)

C  TSP Responsibilities (Continued)

- provide technical assistance for the tree planting practices
- monitor and certify practice completions
- develop landowner stewardship plans for converted CRP-1’s.

D  NIFA Responsibilities

NIFA will coordinate and conduct educational activities on CRP through the State Extension System.

E  Conservation Districts Responsibilities

Conservation Districts will have the opportunity to approve conservation plans.
Responsibilities (Continued)

E  Conservation District Responsibilities

For CREP, Conservation Districts will:

- assist the Conservation Commission in implementing a broad campaign for continuous public information and education regarding CREP;
- report feet of stream bank enrolled on CRP-2, if not done by NRCS;
- in consultation with NRCS:
  - determine if acreage is eligible and suitable for the applicable practice
  - provide FSA with:
    - accurately completed CRP-2 forms
    - certification of practice completion
    - copy of completed annual status reviews
  - develop and sign conservation plans
- issue Washington State cost share payments
- issue Washington State PIP Advance Loan funds
- calculate and issue annual maintenance payments, for up to 5 years.

F  Washington Conservation Commission Responsibilities

The Conservation Commission will:

- in concert with other State Agencies, contribute not less than 20 percent of the overall annual program cost as outlined in the Memorandum of Agreement;
- provide funds for:
  - 10 percent of the reimbursable cost of eligible conservation practices established;
  - PIP Advance Loans;
  - annual maintenance payments for up to 5 years;
  - all costs associated with the annual monitoring program;
  - implement a broad campaign for continuous public information and education regarding CREP;
F Washington Conservation Commission Responsibilities (Continued)

- within 90 days after the end of the Federal fiscal year, prepare an annual report for FSA that will include:
  - level of program participation
  - the results of the annual monitoring program
  - a summary of non-federal CREP program expenditures
  - recommendations to improve the program
  - a comparison of salmon habitat characteristics and population trends in streams with significant and non-significant enrollment.

G Technical Agency Responsibilities

NRCS and Conservation Districts will share technical agency responsibilities for CREP. If a producer inquires with NRCS or the Conservation District about CREP, they shall be referred to FSA to initiate an application on form CRP-2. FSA will refer the CRP-2 to the appropriate technical agency.

Technical work on CREP will be completed by NRCS or Conservation District employees. Field offices will make the decision on who will do the work based on workload, funding and available staffing. CREP technical work must be completed or supervised by an employee with the appropriate job approval authority for the applicable CREP practice. Both NRCS and the Conservation District will sign CREP conservation plans.
A Approving Officials

All MOU and Memorandums of Agreement, other than those in Exhibit 9 to administer CRP, require prior DAFP or Executive Vice President, CCC, approval.

B NRCS Memorandum of Agreement

See Exhibit 9 for a copy of the approved Memorandum of Agreement between NRCS, FSA, and CCC.

C FS Memorandum of Agreement

See Exhibit 9 for a copy of the approved Memorandum of Agreement between FS, FSA, and CCC.

20-30 (Reserved)
STC Administrative Responsibilities

A STC Responsibility

Within the authorities and limitations in this handbook, STC shall:

- direct the administration of CRP
- document actions taken in minutes or other written records
- approve State research projects
- determine whether meritorious relief is applicable on a case-by-case basis

Note: All cases submitted to DAFP for relief shall contain the following:

- copy of participant’s written request for relief
- copy of COC and STC minutes thoroughly documenting request and justification
- copy of all applicable forms and documents in the case file, including but not limited to CRP-1’s, CRP-2’s, copy of aerial photocopies, conservation plans, land deeds, etc.
- all documentation used by COC and STC during review
- narrative of the case in chronological order.

- upon recommendation from the County Office, designate areas of the State where the use of tree shelters, netting, plastic tubes, or other animal damage control devices are warranted and cost-effective on CP3A, CP5A, CP16A, CP22, CP23, CP27, CP28, CP30, CP39, CP40, or CP41--*

Note: Incomplete case files may delay response.

Note: See paragraph 49 and Exhibit 11

- establish the primary nesting or brood rearing season for wildlife in consultation with the State Technical Committee, see subparagraph 664 A.

Note: Establishment of the primary nesting or brood rearing season shall not be delegated to COC’s or County Offices.
31  STC Administrative Responsibilities (Continued)

A  STC Responsibility (Continued)

If STC does not establish dates as recommended by the State Technical Committee, STC must:

- submit dates to CEPD for approval
- include justification to support the dates not recommended by the State Technical Committee.

B  STC Delegating Responsibility

STC may delegate an official representative to sign documents.

C  Retaining Easement Forms

Although useful life easements are not required after the tenth CRP signup, State Offices shall retain all versions of easement forms on file.
**SED Responsibilities for CRP**

**A SED Responsibilities**

SED’s shall:

- ensure that all County Offices follow provisions in this handbook
- require reviews to ensure that County Offices comply with requirements established by the National and State Office
- ensure that County Offices publicize CRP provisions
- review 7-CP for equitable relief provisions.

**DD Responsibilities for CRP**

**A DD Responsibilities**

DD’s shall:

- ensure that COC’s and CED’s follow provisions in this handbook
- review County Office procedures to ensure that County Offices comply with requirements established by the National and State Office
- provide SED with a written report of all reviews
- review and approve CRP-1’s according to paragraphs 401 and 519
A Establishing and Maintaining Policy

COC shall establish local policies that conform to national and State CRP policies.

National practices shall be offered in the State CRP unless STC determines that the practice is not applicable to the State. See Exhibit 11.

Practice specifications shall be maintained for all practices.

B COC Responsibilities

COC shall:

- fully comply with national and State CRP policies
- document actions taken in COC minutes
- document recommendations for relief to STC according to this handbook and 4-CP
- ensure that successors-in-interest to CRP-1’s meet requirements in 1-PL or 4-PL, as applicable
- ensure that County Office employees adhere to provisions and instructions in this handbook
- ensure that participants are taking necessary actions to establish scheduled conservation practices
B COC Responsibilities

See WA Exhibit 16 for required documentation when submitting requests for relief.
34 COC Policies and Responsibilities (Continued)

B COC Responsibilities (Continued)

- ensure that producers receive complete, accurate, and timely program information about CRP by providing information through:
  - program leaflets, newsletters, and print media
  - meetings
  - radio, television, and video

- document actions taken in COC minutes and include the following:
  - all factors considered
  - justification of all determinations
  - reference to applicable handbook procedures.

Note: See paragraph 603 for noncompliance.

35 CED Responsibilities for CRP

A CED Responsibilities

CED’s shall:

- approve AD-245 for the following:
  - conservation practices
  - changes in extent and C/S, including increases if supported by NRCS or TSP

- extend the time to complete practice or report performance

- determine the following:
  - sufficiency of signatures
  - authority of persons signing in a representative capacity
  - contributions of individual or individuals sharing in establishing the practice
  - estimate for report of accomplishment
  - eligible cropland acres
  - eligible marginal pastureland acres
  - reviewing and verifying documentation submitted to determine cropping history

- approve conservation plans
CED Responsibilities for CRP (Continued)

A CED Responsibilities (Continued)

- approve CRP-1 and CRP-1R, except for CRP-1’s involving lands owned by STC, COC, CED, or other County Office employees
- approve CRP-1G Addendum
- ensure that County Offices follow provisions issued by COC, DD, State Offices, and this handbook
- ensure that all automated processes are completed in a timely manner
- report incorrect software calculations, discrepancies, and problems to SED, through DD
- report to SED and the State Office Program Specialist, through DD, incomplete or incorrect procedures in this handbook
- ensure that all pertinent information and program deadlines are publicized
- ensure that signature deadlines are carefully monitored for reconstituted farms, designating payment shares, and necessary supporting documentation, such as AD-1026, CCC-502, CCC-526, CCC-901, CCC-926 as applicable, CCC-931, or CCC-933, as applicable.

PT Responsibilities for CRP

A PT Responsibilities

PT’s shall:

- follow the provisions in this handbook
- report the following to CED:
  - incorrect software calculations and discrepancies
  - incomplete or incorrect procedures in this handbook.
A COC Actions

COC shall document determinations by recording in the COC minutes and completing any of the following as applicable:

- having a member sign the form
- making a note on the document
- attaching COC member’s signed statement to the document
- ensuring a statement is in COC minutes.

B County Office Employee Action

County Office employees shall ensure that facts obtained, or actions taken, are made a matter of written record by:

- recording the facts or actions on either of the following:
  - the document
  - a statement attached to the document
- signing or initialing and dating the document.

A Prohibited Redelegations

COC shall not redelegate the following:

- actions and determinations involving lands owned by STC, COC, CED, or other County Office employee
- determining violations of CRP-1’s
- determining violations of landlord and tenant provisions
- hearing appeals
- appeal decisions.
40  CED Responsibilities

A Nondelegated Responsibilities

Without formal delegation, and as part of the daily office operations, CED or program assistant designee shall:

- issue AD-245 to participants
- send referrals to TSP or NRCS
- approve AD-245 for payment
- prepare forms for C/S payments
- compute C/S and rental payments
- maintain and update changes in land ownership in SCIMS and Farm Records file
- renumber fields redefined for CRP according to 2-CP
- maintain cropland classification for acres devoted to trees for the life of CRP-1
- determine value of refunds, interest, and liquidated damages, when applicable, and according to the provisions of this handbook
- inform landowners that CRP-1 expiration does not terminate the easement on the land under CRP-1. The landowner is responsible for removing the easement from the deed after the easement expires and written approval has been obtained from COC. COC shall not incur any expenses for removing the easement.

41-51 (Reserved)
NRCS Responsibilities

A NRCS National Headquarters

The following provides the responsibilities of the NRCS National Office.

<table>
<thead>
<tr>
<th>Position</th>
<th>Responsibilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Deputy Chief for Programs</td>
<td>Provides overall national leadership for NRCS coordination of program development and implementation with FSA and other agencies.</td>
</tr>
<tr>
<td>Director, Conservation Operations Division</td>
<td>• Provides national program leadership, representing the NRCS Chief in maintaining liaison and working relationship with program leaders in FSA.</td>
</tr>
<tr>
<td></td>
<td>• Provides policy and procedural guidance on CRP operations to NRCS State Offices.</td>
</tr>
<tr>
<td></td>
<td>• Coordinates training for State and Regional CRP activities.</td>
</tr>
</tbody>
</table>

B NRCS Regional Offices

The Regional Conservationist is responsible for providing oversight and evaluation of CRP to ensure:

- consistency in the use of RUSLE and WEQ
- consistency with the water and wind erosion index
- technical adequacy of conservation planning
- technical adequacy of conservation treatment implementation.
NRCS Responsibilities (Continued)

C NRCS State Offices

State Conservationists provide leadership for NRCS activities associated with CRP activities in the State. State Conservationists:

- shall represent NRCS, and chair the State Technical Committee
- shall develop agreements with other Federal and State agencies, as applicable
- shall designate staff to carryout NRCS responsibilities at the State and field levels
- may transfer funds to Conservation Districts or other units of State or local government through cooperative agreements.

Note: The application for funds must be made on SF-424-1 and forwarded to the State Conservationist by the unit of government.

D NRCS Area Offices

In States with Area Offices, or the equivalent, the Area Conservationist shall carryout NRCS responsibilities for CRP as delegated by the State Conservationist.
NRCS Responsibilities (Continued)

E  NRCS Field Offices

The following provides the responsibilities of the District Conservationist.

<table>
<thead>
<tr>
<th>Activity</th>
<th>Responsibility</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coordination and Representation</td>
<td>Coordinates responsibilities and represents NRCS with:</td>
</tr>
<tr>
<td></td>
<td>• FSA</td>
</tr>
<tr>
<td></td>
<td>• FSA COC</td>
</tr>
<tr>
<td></td>
<td>• State Forestry Agency</td>
</tr>
<tr>
<td></td>
<td>• State Wildlife Agency</td>
</tr>
<tr>
<td></td>
<td>• Conservation Districts</td>
</tr>
<tr>
<td></td>
<td>• other agencies, as appropriate.</td>
</tr>
<tr>
<td>Reporting and Records Management</td>
<td>Reports the following to FSA COC promptly:</td>
</tr>
<tr>
<td></td>
<td>• findings that may affect an applicant’s eligibility, including changes in cropping history or management</td>
</tr>
<tr>
<td></td>
<td>• cases of apparent noncompliance with program requirements.</td>
</tr>
<tr>
<td>Planning and Application</td>
<td>Assists producers with the following:</td>
</tr>
<tr>
<td></td>
<td>• developing a conservation plan that NRCS has technical responsibility for that contains all appropriate practices, including operation and maintenance</td>
</tr>
<tr>
<td></td>
<td>• servicing up to 10 percent of AD-862’s for which NRCS has technical responsibility for the assigned practices identified in the conservation plan</td>
</tr>
<tr>
<td></td>
<td>• applying NRCS-assigned conservation practices for which NRCS has technical responsibility for ensuring that they meet FOTG standards</td>
</tr>
<tr>
<td></td>
<td>• obtaining conservation district approval of conservation plans</td>
</tr>
<tr>
<td></td>
<td>• coordinating planning of tree planting with the producer and State Forestry Agency representative for development of the tree planting plan to be referenced in the conservation plan (other approved electronic form).</td>
</tr>
</tbody>
</table>
E  NRCS Field Offices (Continued)

<table>
<thead>
<tr>
<th>Activity</th>
<th>Responsibility</th>
</tr>
</thead>
<tbody>
<tr>
<td>Certification</td>
<td>Certifies on approved forms that the conservation plan meets minimum requirements before obtaining the Conservation District review and approval.</td>
</tr>
<tr>
<td>Completes Status Reviews</td>
<td>Completes status reviews, as applicable on up to 10 percent of all CRP-1’s, according to paragraph 601.</td>
</tr>
</tbody>
</table>

F  NRCS Employee Prohibitions

NRCS employees are prohibited from servicing CRP-1’s on land that they, or their immediate family, own or lease. The Area or State Conservationist shall designate another NRCS employee to service such CRP-1’s.

53-65  (Reserved)
A National Practices and Titles

The following provides the national practices.

<table>
<thead>
<tr>
<th>Practice</th>

</tbody>
</table>

1/ Producer shall elect a contract period between 10 and 15 years.
2/ Practices eligible within approved wellhead protection areas only. See paragraph 181.
3/ Practices eligible only in States and counties authorized for EFCRP.
4/ Practice eligible within approved wellhead protection areas only and only eligible for enrollment before March 14, 2011.
C  CRP Practices for Continuous Signup

**Washington CREP**

Only practices, CP21, CP22, CP23, CP23A and CP30 are authorized for CREP. CP22 practices may be enrolled as CP22 (Riparian Buffer) using the NRCS 391 standard or as CP22 (Hedgerow) using the Washington NRCS 422 standard. See Exhibit 11 for more guidance.

CREP contracts shall be 10 to 15 years in length.

Only land along streams designated in accordance with the CREP Agreement is eligible for enrollment in the CP22 (Riparian Buffer). Designated stream segments are eligible only if they are shown on maps approved by the FSA State Committee and Washington Conservation Commission. These maps will be maintained by the Conservation Commission and distributed in a GIS format by FSA.

Land may be enrolled in the CP22 (Hedgerow) practice under CREP if it is along a stream designated in accordance with the CREP Agreement or within 10 stream miles upstream of a designated stream segment and the stream eventually drains into the designated stream segment. Maximum stream size limitations apply to the hedgerow practice.

Land may be enrolled in the CP21 practice under CREP only if it is along a stream within an 8-digit HUC that contains streams designated in accordance with the CREP Agreement. The CP21 practice is not authorized under CREP along designated CREP streams because this practice does not provide adequate salmonid habitat.

Only wetlands hydrologically connected to designated streams are eligible for enrollment in the CP23, CP23A and CP30 under CREP. Hydrologically connected means the wetland moisture comes from either the designated stream, such as during periods of high flow, or from a ground water source connected to the stream.

See Exhibit 11 practice write ups for addition criteria when enrolling these practices in CREP.

**Washington SAFE**

For CP38 practices under SAFE, producers may elect a contract period of 10 to 15 years.

See WA Exhibit 33 for a list of counties with approved SAFE projects and maps of approved areas.
C CRP Practices for Continuous Signup

*--Highly Erodible Land Initiative (HELI)*

Washington is approved for enrollment of up to 10,300 acres in the HELI. Current enrollment can be monitored at https://fsa.sc.egov.usda.gov/states/cepd/autogis/default.aspx, under HELI and SAFE Reports, HEL Acres By State County Project.

Practices approved for HELI include:
CP1
CP2
CP3
CP3A
CP4D
CP25.

Enrolled land must meet at least the minimum N1a EBI score for the practice provided in Exhibit 26. See notice CRP-716 for more details on HELI requirements.

**Important:** The STC has established a state policy that limits enrollment in HELI to eligible land that has not previously been enrolled in CRP. Expiring CRP/CCRP land cannot be re-enrolled through the HELI.

A fact sheet for the HELI initiative is available on the State Share Point under Farm Programs, CRP, Shared Documents.

**CP33, Habitat Buffers for Upland Birds**

Washington is approved for enrollment of up to 5,000 acres in the CP33 (field border) enrollment. Current enrollment can be monitored at http://www.fsa.usda.gov/FSA/webapp?area=home&subject=copr&topic=rns-crt, under Monthly Active CRP Contract Reports.

See notice CRP-715 for more details on CP33 requirements.

A fact sheet for the CP33 initiative is available on the State Share Point under Farm Programs, CRP, Shared Documents.--*
### D CRP Practices, Signup Types, Contract Lengths, and Incentives

</tbody>
</table>

1/ CP22 (Hedgerow) is limited to streams with a bank full width of 15 feet or less, or in the case of incised channels, where the stream width at the ordinary high water mark is 15 feet or less.

2/ All CREP practices are also eligible for an additional 10 percent incentive on land designated under the State Growth Management Act (RCW 36.70A.170) as “agricultural land of State significance”.

3/ See subparagraph 196 C for which rate applies.

4/ SIP does not apply to CRP or CREP land that is re-enrolled in CREP.
**D  CRP Practices, Signup Types, Contract Lengths, and Incentives**

2/ Incentives apply for contracts approved after November 3, 2008.

*--Note: Payments for CREP CRP-1 participants must adhere to the written CREP agreements. Changes made in PIP/SIP/WRI for CRP’s general and continuous signup do not automatically apply to CREP’s unless those agreements indicate that these payments shall be made “according to 2-CRP” or “consistent with National CRP directives” or similarly worded reference. CREP agreements which include specific payment provisions such as “25% WRI hydrology restoration payments shall be paid for practices CP23 and CP23A” must be adhered to as written.--*

2/ Incentives apply for contracts approved after November 3, 2008.

67-80 (Reserved)
A  All CRP/WRP and CRP General Signup

The Food Security Act of 1985, as amended, requires that USDA not enroll more than 25 percent of the total cropland in a county in CRP, including Continuous, CREP, FWP, and WRP.

The following are 2 types of waivers to this limit.

• The Secretary may authorize a waiver to increase the limit above 25 percent if the Secretary determines both of the following:
  • the action would not adversely affect the local economy of the county
  • producers in the county are having difficulties complying with conservation plans.

  **Note:** Counties with no or minimal cropland with an EI of 15 or greater are **not** eligible for this type of waiver.

• The Secretary may authorize a waiver to exclude acres enrolled under continuous CRP from total CRP enrollment if local county government concurs with the request to exclude the acres. See subparagraphs K and L

B  Total Cropland

A county’s total cropland acreage is based on the cropland **physically** located within the county boundaries. See 3-CM, paragraph 24 for determining the physical location of a tract and its associated cropland, as well as for assigning a physical location county for tracts that cross county boundaries.

Total cropland is maintained in the web-based Farm Records Database.

For counties that are divided into 2 or more subcounty areas, the physical location of cropland is based on the subcounty acres. The physical location of CRP acres will continue to be based on the subcounty area.
C Acreage Subject to All CRP/WRP Limit

The 25 percent cropland limit is applied to the physical location of CRP/WRP acres. For CRP-2 forms completed in the automated COLS, the physical location of CRP acreage is determined by COLS. For CRP-2C, the physical location of the CRP acres is determined according to subparagraph 212B, item 5B.

Acreage subject to the applicable cropland limits, and included in cropland limit reports, includes the following:

- CRP active cropland acreage on contracts projected to be active October 1 of the current year and all later years, according to the System 36 and web-based contract management applications, such as SAFE
- CRP useful easement acreage under active easement periods but under expired CRP-1 contracts
- WRP cropland acreage as reported by NRCS and recorded by County Office staff.

D Acreage Not Subject to the Applicable Cropland Limits

Acreage not subject to the applicable cropland limits and excluded from cropland limit reports includes the following:

- any land enrolled in EWRP administered by NRCS
- pastureland or other noncropland enrolled in WRP administered by NRCS
- CRP marginal pasture land
- CRP land enrolled in field wind breaks (CP5) and shelterbelts (CP16)
- CRP cropland acreage on active contracts scheduled to expire September 30 of the current year.
E  Reserving Acreage for Continuous and WRP Signups

When authorized by notice, COC’s may reserve acreage for continuous, FWP, CREP, and WRP signups. COC’s that reserve acreage for continuous, FWP, CREP, and WRP signups have 2 total county cropland limits; the county’s:

- 25 percent cropland limit for all CRP/WRP acreage that shall continue to apply to all CRP and WRP cropland enrolled, except for counties that obtain future waivers to exceed this 25 percent level

- limit for general signup acreage.

F  County Report of Cropland and CRP Enrollment

The National Office and Kansas City will maintain a report that provides a county’s total cropland, total acres enrolled in CRP, and acres that are available for enrollment in CRP. This report takes into consideration acres subject to the applicable cropland limits, acreage not subject to the applicable cropland limits, acres reserved for continuous and WRP signups, and any existing waivers.

The report will be based on cropland data from the web-based Farm Records Databases, CRP acres from the System 36 and web-based contract management applications (i.e., SAFE), and other source of information on acres reserved from continuous and WRP signups and any existing waivers.

The report will be updated monthly or as necessary.

G  Counties Exceeding Maximum Acreage

When the current enrolled acreage exceeds the limitation and a waiver has not been approved, County Offices shall:

- announce the CRP signup period

- notify all producers that only offers for continuous signup for marginal pastureland practices CP22, CP29, and CP30 and land physically located in a county that has not reached or exceeded the 25 percent limitation will be processed.

Notes: See subparagraph A and paragraph 336

COC shall immediately reject all offers for acreage physically located in the county and inform the producer using CRP-26.
H Requesting Waivers to 25 Percent Limit

For CRP, if the current accepted CRP and WRP acreage in a county has either exceeded 25 percent limitation or is within the smaller of 1,000 acres or 1 percent of 25 percent of the total cropland for CRP general signup set by the COC according to subparagraph 81 A in the county:

- COC may:
  - with STC concurrence, determine to have signup for continuous signup for marginal pastureland practices CP22, CP29, or CP30 only
  - request a waiver of the cropland limitation from STC

- COC shall:
  - document case thoroughly and record in COC minutes
  - complete AD-894 and AD-893 according to paragraphs 82 and 83 respectively, if a waiver will be requested
  - submit requests to STC by a STC-established deadline
  - include verifiable documentation that indicates producers are having difficulties complying with conservations plans.

**Important:** Waivers must:

- be approved by DAFP before the applicable signup begins
- are authorized only for the upcoming signup and do not apply to future signups
H Requesting Waivers to 25 Percent Limit (Continued)

For WRP, NRCS:

- is responsible for:
  - determining whether a waiver will be requested
  - making the request
- will complete AD-894 if a waiver will be requested
- will submit NRCS determinations to STC for concurrence.

Note: Upon NRCS request, COC shall distribute AD-893’s to at least a 10 percent random sampling of agricultural producers and groups listed on AD-894, items 26 and 27.

I What to Include With Waiver Request

County Offices shall include the following with the waiver request:

- letters of recommendation from at least 1 county commissioner and Soil Conservation District
- AD-894 with all items completed
- copies of all AD-893’s.

Note: County Offices shall:

- distribute AD-893 to at least 10 percent random sampling of the agricultural producers and groups listed on AD-894, items 26 and 27
- summarize and keep returned AD-893’s on file for 10 years.
81 Cropland Limitation (Continued)

J STC Waiver Review and Determination

STC shall:

- review AD-894, letters of recommendation, and AD-893’s submitted by the County Office

- determine whether an adequate number of AD-893’s were distributed to sample the opinions of producers, agricultural-related business, and others

- based on AD-894, determine the level of interest in the county for waiving the 25 percent cropland limitation requirement and the effect of a waiver on producers and businesses in the county

Note: If a waiver would have significant adverse affects, as determined by STC, deny the request.

- thoroughly document the basis used to determine whether producers are having difficulties complying with conservation plans

- submit verifiable documentation that indicates producers are having difficulties complying with conservation plans

Note: If producers are not having difficulties complying with conservation plans, STC shall deny request.

Important: Counties with no or minimal cropland with an EI of 15 or greater are not eligible for a waiver of the 25 percent cropland limitation.

- obtain NRCS concurrence on all waiver determinations

- if all requirements are met and STC recommends a waiver be approved, submit request and recommendation to CE PD for determination

- if all requirements are not met or STC does not recommend a waiver be approved, deny request and notify CE PD that the:

  - request was denied and include the reason for denial

  - county will only process offers for land physically located in a county that has not reached or exceeded the 25 percent cropland limitation or continuous signup offers for marginal pastureland practices CP22, CP29, and CP30.
K Requesting Waivers to Exclude Continuous Signup Acres

COC’s may, with concurrence from local county governments, approve a waiver to exclude all continuous signup acres from the total acres enrolled in CRP when calculating the 25 percent, including CREP and FWP.

Waivers to exclude all continuous signup acres must be approved by COC and submitted to CEPD, by memorandum.

If approved, the waiver applies to all continuous signup acres. Waiver requests to exclude only a portion of continuous signup acres, either by program (for example, CREP or FWP) or by practice (for example CP 23, SAFE) will not be considered.

Example: Clinton County, Michigan has 100,000 acres of cropland, including 25,000 acres of CRP. Of the total CRP, 22,000 acres were enrolled under general signup and 3,000 were enrolled under continuous signup. Clinton County submitted a waiver request to exclude continuous signup acres from total acre enrolled in CRP. If the waiver is approved, Clinton County’s total CRP acres, for purposes of the 25 percent limit, will be 22,000. Clinton County could enroll 3,000 acres in a general signup.

L County Government Concurrence

COC’s must obtain concurrence in writing, from local county government before approving a waiver according to subparagraph K.

Local county government officials must be the highest executive authority in the county, for example, County Commissioner, County Executive.
Complete AD-894 according to the following.

DATE (MM-DD-YYYY) 10/1/2003

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means of communication (Braille, large print, audio, etc.) should contact USDA, TARGET Center at (202)-260-0910 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 1400 Independence Avenue, SW, Washington, D.C. 20250-9410 or call (202) 720-6382 (voice or TDD). USDA is an equal opportunity provider and employer.
Part 5  SRR’s and Maximum Payment Rates

101 Maximum Payment Rates

A About Maximum Payment Rates

Before the producer submits an offer on CRP-1, the County Office shall calculate and inform the producer of the maximum payment rate for the eligible acreage being offered. The maximum payment rate is the maximum per acre rental rate that CCC is willing to pay for the eligible acreage offered. Offers submitted in excess of the calculated maximum payment rate shall be automatically rejected.

A separate maximum payment rate will be calculated for each offer based on:

- posted SRR tables
- soils MUSYM and acreage data collected and recorded on CRP-2
- incentive amounts, when applicable for continuous CREP and FWP offers
- maintenance rates, as applicable.

*--The maximum weighted average SRR for general signup offers is $240 per acre. There is no limitation for the calculated maximum payment rate for continuous signup offers,--*

including CREP and FWP.

B SRR Tables

The SRR tables will show the individual maximum SRR for groups of soils by using the NRCS soil map unit symbols based upon the soil survey ID. These groupings rates are established based on similar productivity levels. Therefore, one SRR may be used for more than 1 soil. However, each soil grouping will have only one SRR.

SRR’s are:

- based on the relative productivity of the soil type and the pre-established dryland cash rental rate estimate for the county
- maintained by State Offices using the CRP Soils Database Management System.
A Symbol and SRR Adjustments

FSA posts SRR’s for cropland based on soil map units using unique soil map unit symbols. To facilitate using standardized soils data within USDA, the soil map unit symbols used for SRR posting need to be reviewed periodically to ensure that they match symbols patterns currently published in the soils legends of NRCS’ FOTG.

Additionally, some new SRR’s and soil map unit symbols may need to be approved for CRP use to reflect recent soil survey changes by NRCS.

*--All SRR and soil map unit symbol maintenance will be completed by State Offices.

For questions or concerns on changing SRR’s and/or soil map unit symbols, contact Jean Agapoff by e-mail at jean.agapoff@ca.usda.gov.

County Offices that require the addition of a soil map unit symbol and SRR must submit a request to the State Office.--*

B Soil Map Unit Symbol Update Responsibilities

The National Office, in conjunction with NRCS, shall ensure that rental rates are established for all cropped soils in each county using NRCS’s most current soil survey legend from FOTG, including proper uppercase and lowercase patterns for those symbols using alphabetic letters.

*--For those new soil map units with new symbols, State Offices and NRCS are authorized to update symbols, CRP soil attributes, and SRR’s immediately in the FSA Intranet Soils--*

A Rental Rate Establishment for Cropland

Maximum payment rates for cropland offered for CRP are calculated using SRR’s. SRR’s shall be set at levels that reflect the average cash rental rates per acre for nonirrigated cropland for the production of the predominant annually tilled crops for each soil map unit area within a soil survey area within a county during the most recent 3 years.

These SRR’s shall be set:

- for soil types where share rents are most common which is the cash equivalent of share rents

- for soil types with a predominance of summer fallow or double/triple cropping, reflecting the market rental values of these cropping patterns

- using 1 SRR per soil map unit only

**Note:** The use of multiple rental rates, also known as dual SRR’s, per soil map unit are prohibited as of December 9, 2002. For all dual SRR’s previously authorized, STC shall establish only one SRR that shall be the higher of the two SRR’s previously used for dual SRR posting. This single rental rate shall also be posted with the correct soil map unit symbol excluding any unofficial characters previously used for dual SRR posting.

- at levels reflecting rate consistency within soil surveys and across all county and State lines and soil survey boundaries.

The National Office:

- is responsible for establishing SRR’s

- will use the most current NASS survey, NRCS productivity indexes, and other information as necessary.
103 Establishing SRR’s (Continued)

B Rental Rate Establishment for Pastureland (Riparian Buffers)

Maximum payment rates for marginal pastureland offers are calculated using marginal pastureland rental rates. These rates shall be set for CP22, CP29, and CP30 at levels that reflect the average cash rental values of nonirrigated riparian area grazing land during the most recent 3 years.

The grazing productivity of riparian corridor acreage in arid regions is typically higher and more variable than that of adjacent whole field grazing acreage. For this reason, Western U.S. counties’ marginal pastureland rents are usually higher than average grazing rental rates, and separate rates based on permanent/seasonal riparian sites have been established. These rates were established through a previously released CRP notice.

The basis for these rates shall be set using the following.

<table>
<thead>
<tr>
<th>County Location</th>
<th>Rate Basis</th>
<th>Soil Map Unit Symbol</th>
</tr>
</thead>
<tbody>
<tr>
<td>Eastern and Alaska, Hawaii, and Puerto Rico Counties</td>
<td>1 rate per county</td>
<td>MPLALL</td>
</tr>
<tr>
<td>Western Counties</td>
<td>1 rate per county for land adjacent to seasonal water bodies</td>
<td>MPLSEA</td>
</tr>
<tr>
<td></td>
<td>1 rate per county for land adjacent to perennial water bodies</td>
<td>MPLPER</td>
</tr>
</tbody>
</table>

There should be general consistency of rates across all county and State geopolitical boundaries.
A Rental Rate Posting and Use

Approved rental rates shall be:

- used uniformly for all CRP-2’s and CRP-2C’s regardless of signup type
- effective upon notification by the National Office
- posted year-round on a public display area in the County Office only for the land that exists within the county boundary. County Offices shall **not** post and maintain rates for land in surrounding counties.

105-125 (Reserved)
126 Eligible Person

A Eligible Participants

Eligible participants can include:

- individual
- corporations
- associations
- joint stock companies
- trusts
- estates
- other legal entities
- State governments
- joint stock companies
- local governments
- joint operations.
- Indian Tribal ventures

Note: See 1-PL and 4-PL, as applicable, for payment limitation and AGI payment eligibility requirements.

B Eligibility Criteria for Owners

An owner is eligible to offer land for enrollment in CRP if the owner meets 1 of the following requirements:

- owned the land for 12 months before the close of signup for general signup offers
- owned land for 12 months before submitting the offer for continuous signup

Note: See paragraph 127 for ownership waivers.

Exception: Owners of land under expiring CRP-1 may reoffer such land for enrollment regardless of the length of ownership if all other eligibility requirements are met.
B Eligibility Criteria for Owners (Continued)

- acquired the land by will or succession as a result of death
- acquired the land under circumstances other than for placement in CRP, as determined by DAFP.

Notes: Ownership eligibility requirements shall be satisfied if there is any combination of continuously leasing and owning by the same “person” according to 1-PL or person or legal entity according to 4-PL, during the 12-month period before the close of the current signup period.

When new land is acquired and added to a farm that meets the requirements of this subparagraph, the new land may only be offered when it also meets the ownership eligibility requirements of this subparagraph.

C Eligibility Criteria for Operators

An operator is eligible to offer land for enrollment in CRP when the operator meets all of the following requirements:

- operated the land for 12 months before the close of current of signup for general signup
- operated the land for 12 months before submitting the offer for continuous, CREP, and FWP signups
- provides satisfactory evidence, as determined by COC, that control of the land will continue uninterrupted for the CRP-1 period.

Note: Satisfactory evidence may include any of the following:

- statement signed by the owner
- written lease for the appropriate time period
- owner’s signature on CRP-1.

Operator eligibility requirements shall be satisfied if there is any combination of leasing and owning by the same “person” according to 1-PL or person or legal entity according to 4-PL, during the 12-month period before the close of the current signup period.
D Eligibility Criteria for Beginning or SDA Farmers or Ranchers

A beginning or SDA farmer or rancher that has an approved CRP-1R is not required to meet the 12 month owner/operator criteria when enrolling in CRP continuous signup.

E Payment Share Policy

An eligible person offering land for CRP must be eligible to offer land for CRP in his or her own right.

Participants will determine shares. COC shall approve shares provided they are not designed to circumvent other program regulations. Payment shares are not required to be commensurate with previous CRP annual rental payments or interests on other contracts or agreements in the County Office.

Note: “0” percent share is not an appropriate share for the person qualifying the land.

F Date Ownership Commences

County Offices shall determine ownership eligibility based on:

- the later of the following:
  - the date the deed was recorded
  - the date of possession, if the possession date is after the deed recording date

Note: When a deed has not been recorded in the local land records office, the case shall be submitted to DAFP, Attn.: Director, CEPD, for review before CRP-1 is approved.

- the date a buyer properly filed a contract-for-deed with the seller under applicable State law

- the date the land was acquired, through foreclosure proceedings, and the new owner has the right of occupancy.

Note: This provision applies only to land acquired through foreclosure proceedings.
G Date Operatorship Commences

County Offices shall use County Office records to determine the date operatorship commenced. If no records exist, the operator shall provide adequate assurance, as determined by COC, that the operator is eligible to participate.
127 Waiving Ownership Eligibility Requirements (Continued)

A COC Waivers of Ownership Requirements (Continued)

When the land offered is marginal pasture land, COC’s may waive the 12-month ownership requirement if the total offered acreage is less than or equal to 10 percent of the total farmland purchased.

See WA Exhibit 16 for required documentation when submitting requests for a STC or DAFP waiver of the 12-month ownership requirement.
A COC Waivers of Ownership Requirements

COC’s may accept land in CRP that does not meet the ownership requirements in subparagraph 126 B when:

- the land is any 1 of the following:
  - acquired from an immediate family member within the 12-month period. The total time owned by the family members was more than 12 months. Immediate family members include parents, children, siblings, grandparents, adopted children, and spouse.
  
  - owned for more than 12 months, then sold on contract for deed. Later the original owner repossessed the land and wants to submit an offer for CRP.
  
  - sold and the original owner holds the mortgage. The original owner regains title through foreclosure proceedings after the new owner files for bankruptcy. The original owner is eligible if the land was owned for at least 12 months.
  
  - owned by a joint venture or general partnership of which at least 1 member has owned at least 50 percent of the land for the required 12-month period.

Example: Tim and Steve have owned 100 acres with an undivided interest for the last 10 years. Tim has a 60 percent share and Steve has a 40 percent share. Six months before the end of the CRP signup period, Tim bought Steve’s share of the land and became the sole owner. Tim is eligible to offer land in CRP. If Steve had bought Tim’s interest, Steve would not be eligible to enroll the land.
Waiving Ownership Eligibility Requirements (Continued)

A COC Waivers of Ownership Requirements (Continued)

• a producer did 1 of the following:
  
  • leased a farm with an option to buy. The producer operated the acreage for more than 12 months before the close of the current signup period, then purchased the land shortly before signup.
  
  • owned a farm for more than 12 months. The producer then purchases additional acreage and the farms are combined. CRP-1 can be approved on the resulting farm only if the designated acres are all on the original tract.
  
  • owned a farm for more than 12 months. The producer then lost land in foreclosure and exercised the right of redemption under State law, thereby redeeming the land from the mortgage holder before signup.

COC may waive the 12-month ownership requirement if the total offered acreage is less than or equal to 10 percent of the total cropland purchased.

Example: James Smith (owner) purchased 180 acres of cropland on January 15, 2003. This purchase is less than 1 year before the end of the signup period. Mr. Smith offered 15 acres of cropland for enrollment in CRP. Because the 15 acres of cropland is less than or equal to 10 percent of the total cropland purchased, COC may waive the 12-month ownership provision.

Waivers for conditions not listed in this paragraph may only be approved by DAFP. All requests for waivers must include COC and STC recommendation and all relevant documentation to support the request, including a copy of the COC minutes that clearly indicate why COC determined to recommend the waiver.

Note: When STC does not recommend approval of a waiver request, STC shall deny the request and provide appeal rights according to 1-APP.
B  STC Waivers of Ownership Requirements

When the land offered is marginal pasture land, the STC may waive the 12-month ownership requirement if the total offered acreage is less than or equal to 20 percent of the total farmland purchased.
127 Waiving Ownership Eligibility Requirements (Continued)

B STC Waivers of Ownership Requirements

STC may waive the 12-month ownership requirement if the total offered acreage is less than or equal to 20 percent of the total cropland purchased.

Example: John Jones (owner) purchased 400 acres of farmland on January 20, 2003. The total cropland purchased is 300 acres. This purchase is less than 1 year before the end of the signup period. Mr. Jones offered 50 acres of cropland for enrollment in CRP. Because the 50 acres of cropland is less than or equal to 20 percent of the total cropland purchased, STC may waive the 12-month ownership provisions.

C Offer Acceptance When Eligibility Is Questionable

When ownership eligibility is questionable, County Offices shall accept offers.

County Offices shall:

- inform the producer that the offer shall not be considered until ownership eligibility has been determined

- submit the offer through the COLS process.

Note: The offer is submitted but will not be ranked because eligibility has not been determined.
A Structural Change Policy

CRP ownership eligibility criteria provides an exception for structural changes in joint operations. See 1-PL or 4-PL, as applicable, for the definition of joint operations.

Note: Structural changes in entities, such as corporations, trusts, or limited partnerships, do not affect ownership eligibility but may affect payment limitation.

When a structural change has occurred in a joint operation within the 12-month ownership requirement and the persons continuing to conduct the farming operation after the reorganization were primarily responsible for conducting the farming operation before the reorganization, the members are eligible for CRP.

Example: Smith Farms consisted of 3 members in a general partnership. The partnership made a structural change adding a family member as a general partner. The partnership increased by 1 person 6 months before the end of signup.

Note: The structural change policy applies to owners and operators.

B Limited Annual Rental Payments

Annual rental payments for joint operations qualifying for CRP under the structural change exception shall be limited to the lower of the maximum payment limitation per person for the persons determined eligible before the reorganization versus after the reorganization.

Example: Using the example in subparagraph A, Smith Farms’ CRP-1 shall be limited to $150,000 in annual rental payments. Although the maximum contract payment is determined for 3 persons, each of the 4 members will receive their appropriate share of the total payment.
A Policy

Producers who, before submitting a CRP offer, exercised their right of redemption under State law and redeemed land from a mortgage holder after foreclosure or after voluntarily conveying the acreage to the lending institution instead of foreclosure are eligible to participate if all of the following are met:

- the length of original land ownership, foreclosure, redemption, and resulting ownership is at least 12 months

- the producer agrees in writing that CRP-1 shall not be assumed by a successor-in-interest

*--Note: COC or CED shall approve CRP-1 only after agreement is received.--*

- the acreage is otherwise eligible according to Section 2.

B Notifying the Producer

County Offices shall:

- use CRP-25 to notify producers who had a brief loss of ownership, because of foreclosure or the threat of foreclosure, that they may participate when all other eligibility requirements are met

  Note: See Exhibit 5 for an example of CRP-25.

- modify CRP-25 to fit the specific case

- reproduce CRP-25 locally

  Note: Include the form number and date on the reproduction.

- prepare CRP-25 in duplicate

- mail original CRP-25 to the producer

- file a copy of CRP-25 with the producer’s offer.
A Landlord and Tenant Provisions

Landlords shall:

- when the acreage offered is not enrolled in CRP at the time of signup:
  - provide tenants, who have an interest in the acreage being offered at the time of signup, an opportunity to participate in CRP
  - not reduce the number of tenants on the farm as a result of or in anticipation of enrollment in CRP

- when the acreage offered is enrolled in CRP at the time of signup, provide tenants, with an interest in the CRP-1 acreage, an opportunity to participate in CRP if either of the following apply:
  - the tenant is otherwise involved in farming other cropland acreage on the farm at the time of signup
  - the tenant has an interest in the acreage being offered on the effective date of the new CRP-1.

Note: Interest in CRP-1 is not considered farming.

COC shall inform all producers that landlords who violate these provisions shall be ineligible to earn CRP payments, including annual rental payments, incentive payments, and C/S payments, until COC determines that the landlord is no longer in violation. See subparagraph B.

B Before Approving CRP-1

COC shall determine whether landlord tenant provisions have been violated before approving CRP-1.

When there is a dispute between a landlord and tenant, and COC determines there is insufficient evidence to make a determination, COC shall refuse to approve CRP-1 until the landlord and tenant resolve the dispute.

If the landlord and tenant provisions have been violated, COC shall not approve CRP-1.
130 CRP Landlord and Tenant Provisions (Continued)

C Binding CRP-1

An approved CRP-1 is a binding 10- through 15-year contract between all signatories on CRP-1, with a share greater than zero, and CCC.

- Transferring interest in the land under CRP-1 does not relieve COC’s responsibility to ensure protection of the rights of the operator or tenants who are signatories on CRP-1 and who continue to have an interest in the acreage.

- CRP policy prohibits a landlord from replacing or removing the operator, tenant, or an estate from CRP-1 unless at least 1 of the conditions in subparagraph F or G are met.

D When Provisions Do Not Apply

Landlord and tenant provisions do not apply when the tenant:

- was removed for cause as determined by RA according to State law
- left the farm voluntarily without any coercion from the landlord.

Note: A signed statement by the tenant or sharecropper voluntarily relinquishing his or her right to the farm or CRP benefits is sufficient evidence to show voluntary removal.

The landlord may offer land for CRP that has a history of a tenant if COC determines that the landlord has the “necessary means” to conduct the farming operation.

For CRP purposes, “necessary means” means the landlord has the knowledge and ability to establish and maintain the CRP cover.
E Certification Statement

A certification statement shall be signed by all tenants and landlords before approval of CRP-1. Attach the certification statement to CRP-1. State Offices shall modify the following certification statement, after consulting with RA, to conform to State law, to include State parameters for removing tenants from CRP-1, and to modify the language for it to be clearly understood by producers.

I (We) understand that tenants participating on Conservation Reserve Program Contract, form CRP-1, may be removed from the contract if tenancy is not maintained, as determined by the Commodity Credit Corporation. In addition, I (We) also understand that the tenant may be determined to be removed when the tenant:

1. was removed for cause, as determined by COC, after State Office consultation with RA
2. requests, in writing, to be removed from CRP-1
3. files for bankruptcy and the trustee or debtor in possession fails to affirm CRP-1
4. dies during the CRP-1 period and the administrator of the estate fails to succeed to CRP-1 within the 60 calendar days of COC notification.

Signature(s) and date(s) __________________________
7-28-10
E  Certification Statement

The OGC Regional Attorney has approved the statement landlord/tenant certification shown in this subparagraph as is.
After Approving CRP-1

*--If the COC receives a request from a landlord to involuntarily remove a tenant from a CRP-1, take the following steps:

- inform the tenant and all landlords in writing that a request has been received to remove the tenant from the contract

- provide up to 30 days for the parties to submit arguments in writing about why the tenant should or should not be removed and provide any supporting documents

- encourage the parties to submit items such as written leases or written correspondence between them

- have the COC review the materials received from the producers and, if desired, make a recommendation on whether they feel the requirements to remove a tenant have been met

- submit the complete file including any correspondence between FSA and the parties, along with applicable COC minutes to the State Office

Note: Staff and COC need to keep in mind that FSA does not terminate or alter producer leases or remove tenants from a farm. FSA’s authority is limited the enforcement of the CRP contract.

The State Office will review the materials provided and guidance previously provided by OGC. The specifics of the case may be submitted to OGC for review if deemed necessary. Thereafter, the State Office will provide guidance on whether the requirements necessary to remove a tenant from a CRP-1 have been met, and the steps to take thereafter.--*
Tenants participating in CRP shall maintain tenancy throughout the CRP-1 period to remain on the contract. If a tenant fails to maintain this tenancy, COC shall determine, based on guidance from the State Office, whether the tenant should be removed for cause.

**Note:** Tenancy is defined as maintaining acreage according to the Conservation Plan of Operation or, as otherwise required on the farm, as determined by COC.

State Offices shall consult RA for guidance to establish general parameters about acceptable conditions leading to removing tenants for cause. COC’s may immediately act on cases within these parameters.

County Offices shall assume tenancy is being maintained unless notified otherwise by anyone having an interest in the acreage.

After CRP-1 is approved, the operator or tenant may be replaced on CRP-1 when the operator or tenant:

- was removed for cause, as determined by COC, after State Office consultation with RA
  
  **Note:** All court-ordered directives to remove the operator or tenant from CRP-1 shall be reviewed by RA. Operators or tenants will only be removed from CRP-1 after review for legal sufficiency of the court-ordered directive by RA and RA approves the removal of the operator or tenant.

- requests, in writing, to be removed from CRP-1

- files for bankruptcy and the trustee or debtor in possession fails to affirm CRP-1 according to paragraph 580

- dies during the CRP-1 period, and the administrator of the estate fails to succeed to CRP-1 within 60 calendar days of COC notification as required by paragraph 546.
G Removing Participants From CRP-1

When a landlord legally removes an operator or tenant from the farm, COC shall determine whether the operator or tenant may be removed from CRP-1 based on provisions in subparagraph F or G. If COC determines to remove the operator or tenant, the landlord may, if a revised CRP-1 is signed:

- continue CRP-1 as owner and receive all the payment
- acquire a new operator or tenant who may become a successor-in-interest to CRP-1.

County Offices shall provide the:

- landlord or new operator or tenant, if applicable, with a revised CRP-1
- former operator or tenant appeal rights according to 1-APP.
131 AGI Provisions

Beginning May 13, 2002, an average AGI limitation became effective for certain programs, including CRP.

This provision is effective beginning with the 2003 crop year. The average AGI limitation provides that an individual or entity shall not be eligible to receive certain benefits, during a crop year, if the average AGI of the individual or entity exceeds $2.5 million, and less than 75 percent of the average AGI of the individual or entity is derived from farming, ranching, or forestry operations. See 1-PL.

Note: If a succession occurs to CRP-1 approved May 13, 2002, through September 30, 2008, the successor must meet the AGI provisions in 1-PL.

B Policy for CRP-1’s Approved Beginning October 1, 2008

The average AGI limitation provides that a person or legal entity shall be ineligible to receive certain benefits, during a crop year if the average adjusted gross nonfarm income of the person or legal entity exceeds $1 million, unless at least 66.66 percent of the average AGI of the person or legal entity is average adjusted gross farm income. See 4-PL.

Note: If a succession occurs to CRP-1 approved beginning October 1, 2008, the successor must meet the AGI provisions in 4-PL.

C AGI Certification

All producers with a share greater than zero, including members of entities and joint operations, must provide a certification of average AGI according to 1-PL or 4-PL, as applicable. For CRP, certifications of average AGI are binding for the life of CRP-1.

*--CCC-526, CCC-926, CCC-931, or CCC-933, as applicable, must be filed before CRP-1 is approved. AGI determinations for CRP are for the contract period. See subparagraph 131 G for contract revision AGI requirements.

D Exception for Lands of Special Significance

The Administrator may allow a waiver to the $1 million AGI limitation on a case-by-case basis for land that is determined to be environmentally sensitive land of special significance.

Waivers must be submitted to DAFP according to Exhibit 16.
E Determining Which AGI Rule Applies to Contract

The following provides guidance on which:

- payment limitation and rules apply to CRP contracts
- AGI certification form should have been filed or must be filed at the time of contract approval.

Note: Follow 4-PL to determine which business types are required to file AGI certifications.

<table>

Note: For CRP continuous contracts approved between May 13, 2002, and September 30, 2002, that were effective for program year 2002, AGI provisions are not applicable. See subparagraph A for additional information.

F AGI Requirements for Producers Associated with Original Contracts

Beginning June 4, 2012, follow this table to determine the requirements for filing an AGI certification form for producers.

Note: See subparagraph E to determine which AGI certification form should be filed.

If the producer is an entity or joint operation, all members with an ownership share are required to file the applicable AGI certification if the entity/joint operation is required to file the certification.

<table>
<thead>
<tr>
<th>IF the producer’s share is...</th>
<th>AND the producer is...</th>

</tr>
<tr>
<td></td>
<td></td>
<td>each member with an ownership share greater than 0 percent.</td>
</tr>
</tbody>
</table>
AGI Provisions (Continued)

---G Contract Revisions

This table provides guidance for the requirements for filing an AGI certification form for producers and members of entities and joint operations when a contract is revised for either of the following reasons:

- new producer is added to the CRP contract
- new members are added to an entity or joint operation that has an interest in the CRP contract.

**Note:** See the table in subparagraph E to determine which AGI certification form should be filed.

<table>
<thead>
<tr>

<td></td>
<td></td>
<td>required for year the member was added to the operation with an ownership share greater than 0 percent.&lt;br&gt;See exception in subparagraph H.</td>
</tr>
</tbody>
</table>

H  Exception to Year AGI Certification Must be Filed

If a producer or member of an entity or joint operation was previously associated with the CRP contract, then the original AGI certification continues to apply for that producer or member if their role changes.

Example: John Farmer has 100 percent interest in a CRP contract approved in 2010.

Farmers LLC replace John Farmer as a producer on the CRP contract in 2012. John Farmer is a member of Farmers LLC and has a 100 percent ownership interest in LLC.

Because John Farmer was already associated with the contract, the 2010 AGI certification continues to be applicable for John. However, an AGI certification must be filed for 2012 for Farmers LLC.--*
132 Federal Crop Insurance Requirements for CRP Participants

A Federal Crop Insurance Requirements

CRP participants on:

- acreage that was enrolled on or after October 13, 1994, must be in compliance with the Federal Crop Insurance Reform Act to remain eligible for participation.

- land enrolled on or after October 13, 1994, must do either of the following:
  - obtain at least the catastrophic level of insurance for each crop of economic significance grown on each farm in the county in which the producer has an interest, if insurance is available in the county for the crop.
  - provide a written FSA-570 to the Secretary that waives any eligibility for emergency crop loss assistance in connection with the crop.

133-150 (Reserved)
151 Eligible Land Criteria

A Cropland Eligibility Criteria

For CREP only, in addition to the national cropland eligibility criteria, cropland can be considered to meet the cropping history requirement if it was planted to orchard, vineyard or berries during 4 of the 6 crop years from 1996 through 2001. Examples of these crops would include tree fruit such as apples, pears and cherries, grapes, raspberries and blueberries.

To be eligible for enrollment in CREP under a CP22 (Riparian Buffer) practice, the offered acreage must be:

- located along water bodies designated in accordance with the CREP Agreement, paragraph IVA
- suitable for the establishment of a riparian buffer.

The designation of eligible stream segments for the CP22 (Riparian Buffer) practice must be approved by the FSA State Committee and Washington Conservation Commission. Approved stream segments will be shown on maps maintained by the Conservation Commission and distributed in a GIS format by FSA. In no case will the number of eligible stream miles exceed 10,000 miles.

Note: See WA Exhibit 26 for guidance on how to nominate a stream segment for approval using these criteria.

To be eligible for enrollment in CREP under a:

- CP21 practice, the offered acreage must lie along a stream within an 8-diget HUC that contains streams designated for CREP enrollment as described in this paragraph. Land directly adjacent to a CREP eligible stream or a stream reach that directly supports salmon or steelhead is not eligible for CP21 enrollment under CREP because the practice does not provide adequate salmonid habitat.
- CP22 (Hedgerow) practice, the offered acreage must lie along a designated stream segment or be within 10 stream miles upstream of a designated stream segment and the stream where the CP22 (Hedgerow) will be placed eventually drains into the designated stream segment.
- CP23 or CP23A practice, the offered acreage must include a wetland that is hydrologically connected to a stream designated for CREP enrollment as described above.
- CP30 practice, the offered acreage must buffer a wetland that is hydrologically connected to stream designated for CREP enrollment as described above.

Enrollment along sloughs that drain directly into the ocean is only authorized if there is no fish blockage, such as a tide gate. If a fish blockage exists, only the CP21 practice is authorized under CREP if all other CP21 criteria are met.

See Exhibit 11 practice write ups for additional guidance when enrolling these practices in CREP.
151 Eligible Land Criteria

A Cropland Cropping History Eligibility Criteria

Eligible cropland, including cropland offered under CREP, includes cropland that is both of the following:

- planted or considered planted to an agricultural commodity during 4 of the 6 crop years from 2002 through 2007

**Notes:** The applicable crop years 2002 through 2007 are fixed by statute.

Acreage for which the producer received a crop insurance indemnity payment for prevented planting shall be considered planted for that year for CRP cropping history purposes.

The following are conserving use and are considered planted for cropping history purposes for CRP:

- during 2002 through 2007, any planted alfalfa, planted other multi-year grasses and legumes, and any summer fallow

- any rotation of alfalfa planted other multi-year grasses and legumes and any summer fallow

**Note:** The rotation must not exceed 12 consecutive years.

- any land previously enrolled in CRP where the grass cover continues to be maintained as though enrolled in CRP.

Field margins that are incidental to the planting of crops, such as turnrows, field borders, and center pivot corners, are eligible to be offered. Field margins do not include other areas within a field.
A Cropland Cropping History Eligibility Criteria (Continued)

Cropland enrolled in CRP is considered planted during the term of CRP-1. For CRP purposes, after CRP-1 expiration, the acreage previously enrolled in CRP maintains the cropping history earned while under CRP-1.

Acreage planted in an unworkmanlike manner, as determined by COC, shall not be considered planted for cropping history for CRP purposes.

- physically and legally capable of being planted in a normal manner to an agricultural commodity, as determined by COC.

Note: COC’s determination shall be based on whether the cropland could be planted to an agricultural commodity in a normal manner during a normal cropping season.

Acreage enrolled in CRP maintains its status as eligible cropland. Therefore, acreage currently enrolled in CRP is eligible to be offered for enrollment if the current CRP-1 expires September 30 of the FY before the effective date of a new contract, unless the acreage has a CRP useful life easement that extends beyond the length of the current CRP-1.

Exception: Land that is currently enrolled in CRP that did not meet the cropland eligibility criteria when initially enrolled, but was allowed to continue in CRP under erroneous eligibility provisions, is not eligible to be re-enrolled.
A Cropland Cropping History Eligibility Criteria (Continued)

The following is an example of cropping history credit for conserving use and rotations.

</tbody>
</table>

Notes: Shaded area reflects acreage that receives planted or considered planted acreage.

Exception: The rotation cycle is shaded when rotation is used to provide cropping history.--*

Hay must be a stand of alfalfa and/or other multi-year grasses and/or legumes.

Acreage permanently under water, including acreage currently enrolled in CRP, is ineligible to be offered for enrollment in CRP.

Exception: Acreage devoted to either of the following may be eligible to be offered if all other eligibility requirements are met:

- CP9, Shallow Water Areas for Wildlife
- water according to paragraph 429
### B Land Eligibility Criteria for General Signup

Any land meeting the requirements in subparagraph A may be eligible for enrollment if it falls into 1 or more of the following categories.

<table>
<thead>
<tr>
<th>Category</th>
<th>Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Erodibility</td>
<td>Cropland offered if the weighted average EI for the 3 predominant soils of the new land on the acreage offered is 8 or greater.</td>
</tr>
<tr>
<td></td>
<td>The most current soil survey information shall be used. EI for CRP eligibility shall be calculated using RUSLE or WEQ. Do not use USLE.</td>
</tr>
<tr>
<td></td>
<td>EI’s will be calculated based on the predominance of the type of erosion present. If the offer is subject to both wind and water erosion, the higher EI calculation shall be used. The results of the RUSLE or WEQ shall not be added together.</td>
</tr>
<tr>

The Washington State Air Quality CPA is designated based on hydraulic unit code (HUC) areas and some county boundaries. To be eligible based on being located within the state CPA, at least 51 percent of the offered acreage must be physically located within the CPA boundary.

See WA Exhibit 3 for a map of the state CPA and air quality, water quality and wildlife zone maps.
C Land Enrolled in Other Programs

If all other eligibility criteria are met, the following land may be offered for CRP:

- land currently under Pub. L. 566 or Pub. L. 534 long-term contracts, if approved for modification by NRCS
- cropland that has had a permanent cover, including trees, established under EQIP, WHIP, CSP, or the Conservation Security Program, that is no longer within practice lifespan requirements.

Examples: Cropland on which permanent vegetative cover has been established under EQIP and still under EQIP lifespan requirements is not eligible for enrollment in CRP.

A farm under a WHIP contract that has only a part of the otherwise eligible cropland devoted to a permanent cover may have the WHIP contract modified, if approved by NRCS, to allow enrollment of acreage not devoted to a permanent cover into CRP.

Note: See subparagraph D for land ineligible for enrollment in CRP.

D Ineligible Acreage

The following acreage is ineligible to be offered in CRP:

- Federally owned land unless the producer submitting the offer has a lease for the CRP-1 period

Note: Federal entities are ineligible to receive CRP payments and cannot become a successor-in-interest to CRP-1.

- land on which a Federal agency restricts the use in a mortgage or an easement

- land under other easements, or other legal restrictions, that require a resource-conserving cover be maintained throughout any part of the proposed contract period—*
151 Eligible Land Criteria (Continued)

D Ineligible Acreage (Continued)

- acreage permanently under water, including acreage currently enrolled in CRP

**Exception:** Acreage devoted to either of the following may be eligible to be offered if all other eligibility requirements are met:

- CP9, Shallow Water Area for Wildlife
- water, according to paragraph 429.

- land under CSP, EQIP, GRP, or WHIP that meets either of the following criteria:

  - has had a permanent cover, including trees, established and is still within the practice lifespan requirements
  - is under agreement and is scheduled to have a permanent cover, including trees, established regardless of whether any practice has been started or C/S paid.

**Notes:** Canceling or modifying the contract or agreement or refunding C/S shall not make the acreage eligible to be offered for enrollment.

Certain otherwise eligible cropland acreage enrolled in a WHIP contract may be eligible for enrollment in CRP if the contract is approved for modification by NRCS. See subparagraph C.

Acreage under contract or agreement, which are management or structural in nature and does not require establishment or enhancement of a permanent cover, may be offered for enrollment if all other eligibility requirements are met. All acreage offered for enrollment in CRP that is under an EQIP contract **must** be terminated from the EQIP contract before CRP-1 is approved. The EQIP contract **must** be modified to remove this acreage according to EQIP Manual.

**Examples:** Following are examples of management or structural practices:

- strip cropping
- no-till systems
- underground pipelines
- terraces that do not require permanent cover.
D Ineligible Acreage (Continued)

- land currently within practice lifespan requirements according to subparagraph C
- land already enrolled in CRP

**Exception:** Land enrolled in CRP is eligible to be offered for re-enrollment in the program if the current CRP-1 expires September 30 of the FY the acreage is offered for enrollment, unless the acreage has a CRP useful life easement that extends beyond the length of the current CRP-1. See subparagraph A.

- existing grass waterways

**Exceptions:** Grass waterways that are enrolled in CRP at the time this acreage is offered for enrollment in CRP.

- Newly created grass waterways completed within the 12-month period previous to signup if:
  - completed according to a conservation plan
  - not under practice lifespan requirements according to subparagraph C.

Grass waterways enhanced or expanded within the 12-month period previous to signup if completed according to a conservation plan.

**Note:** Grass waterways that are purposely destroyed to be made eligible for enrollment in CRP shall remain ineligible.

- land where the producer is required to perform a practice as an obligation to comply with local, State, or Federal law, and is notified in writing that the required practice must be performed or enforcement action, such as fines or closing the operation, will be taken against the producer.
152  Native American Tribal Lands

A  Land Eligibility

Native American tribal land is eligible for CRP. Tribal lands are:

- subject to BIA management
- not U.S. owned.

153  State, County, or Publicly Owned Land

A  Land Eligibility

State, county, or publicly owned land that is offered for participation in CRP is eligible if the land meets all other eligibility requirements.

154  Land Under Lease for Gas, Oil, Earth, or Mineral Rights

A  Guidelines for Existing Lease

Eligible land on which gas, oil, earth, or other mineral rights exploration has been leased or is owned by someone other than the person interested in enrolling acreage in CRP may be offered for CRP-1.

If any person has an existing mineral rights’ lease or someone other than the CRP participant owns the mineral rights before land is offered for CRP and the person exercises the right to extract minerals, etc., from the land that is subject to CRP, COC shall:

- terminate CRP-1 on affected acres
- waive refund of annual rental payments and liquidated damages
- require refund of C/S payments
- advise the CRP participant that the land may be reoffered in a subsequent signup if the land meets all other eligibility requirements.
Land Under Lease for Gas, Oil, Earth, or Mineral Rights (Continued)

B Guidelines After Land Is Accepted in CRP

If a person enters into a mineral rights’ lease or sells the mineral rights after the land is accepted in CRP, and during the CRP-1 period the lessor or owner of the mineral rights exercises the right to extract minerals, etc., from land that is subject to CRP-1, COC shall:

- terminate CRP-1 on the affected acres
- obtain refund of payments and liquidated damages according to paragraphs 571 and 577
- advise the CRP participant that the land may be reoffered in subsequent signups if the land meets all other eligibility requirements.

C Exploration of Minerals by Sampling

If exploration of minerals is performed by sampling to determine whether mining is feasible, COC shall not terminate CRP-1 or reduce annual payments if:

- the exploration of minerals by sampling is completed within date specified by COC
- any disturbed cover is re-established at the CRP participant’s expense
- the land will continue to meet eligibility requirements as determined by COC.

155-170 (Reserved)
171 Overview

A General Information

For the CP22, Riparian Buffer and Hedgerow practice:

- Land that cannot meet the riparian buffer standard in accordance with 2-CRP, Exhibit 11 is not eligible for enrollment. This includes land that has an obstruction between it and the eligible stream, such as a dike, road or railroad.

- Producers must offer land that meets at least the minimum width specified in Exhibit 11. Offers that do not include the minimum required width are not eligible. Minor exceptions to the minimum width are acceptable if the buffer will be functional as determined by NRCS or CD.

- The maximum acreage that can be enrolled is limited to an average buffer width of 180 feet. This also applies to CREP.

- See the CP22 write up in Exhibit 11 for additional guidance.

For CREP:

- Enrollment will be offered on a continuous basis. Enrollment is authorized for up to 100,000 acres in portions of 32 counties.

- See paragraph 151 for additional cropland and marginal pasture land eligibility criteria, including criteria for CREP.
A General Information

Persons determined eligible for CRP according to Part 6 may request to enroll certain acreage in the program at any time within the total county cropland limit requirements according to Part 4. This provision provides producers and landowners with management flexibility when planning conservation enhancements to their farming operations. The practices available during continuous signup generally provide high environmental benefits to large areas when compared to the acreage on which the practice is implemented.

Unlike a standard CRP signup where producers submit offers indicating the amount they are willing to accept to enroll acreage in the program, the continuous signup process does not have a competitive evaluation process.

The National Office shall provide State and County Offices:

- program information sheets for producers
- program provisions and procedures
- other information as requested.

The purpose of continuous signup is to enroll:

- small, environmentally sensitive acreages
- target acreage.
B Signup Numbers and Program Year

Signup numbers change at the beginning of each FY under the continuous signup provisions. See Exhibit 20.

The program year is FY in which the first payment is earned.

*--Example: Producer submits an offer for CP21 on July 1, 2010. COC or CED approves CRP-1 on September 22, 2010. CRP-1 is effective October 1, 2010. The program year on CRP-1 is 2011.

181 Eligibility Requirements

A Eligibility Requirements for Cropland

All of the following must be met before cropland acreage may be determined acceptable for enrollment under continuous signup.

• COC or CED determines that the:
  - producer eligibility requirements in Part 6, Section 1, are met
  - acreage offered is cropland

Important: See 3-CM for the definition of cropland.

• acreage offered meets eligibility criteria in subparagraph 151 A
• practice offered is an eligible practice for continuous signup

Note: See subparagraph 66 C for a list of eligible practices.

• practice and acreage offered meet the program policy and size requirements for the practice provided in Exhibit 11

*Note: COC determines county cropland limit eligibility criteria in Part 4 is met.*
181 Eligibility Requirements

A Eligibility Requirements for Cropland

For CREP eligibility, cropland must be along stream segments approved by the FSA State Committee and Washington Conservation Commission in accordance with the paragraph IV A of the CREP Agreement, and WA Exhibit 26.
181 Eligibility Requirements (Continued)

A Eligibility Requirements for Cropland (Continued)

- NRCS or TSP determines, based on a site visit, the:
  - acreage is suitable for the offered practice
  - practice is needed and feasible to solve the resource concern

  **Note:** Expiring CRP acreage automatically meets the needed and feasible eligibility requirement.

- purpose of the practice according to Exhibit 11 is met.

- Producer offers a per acre rental rate that is less than or equal to the calculated maximum payment rate. Offers in excess of the maximum payment rate shall be rejected.

  **Note:** To calculate the per acre maximum payment rate, the County Office shall identify the 3 predominant soil types using TERRA for the eligible acreage offered on CRP-2C, including land that is offered under infeasible to farm criteria. See paragraphs 196, 212, and the TERRA User Guide.

For cropland within an approved wellhead protection area, see subparagraph B.

**Land that meets the definition of cropland shall not be enrolled in CRP as marginal pastureland.** See subparagraph C for eligibility requirements for marginal pastureland.

B Eligibility Requirements for Cropland Within Wellhead Protection Areas

An approved public wellhead protection area is the area designated by the appropriate State agency with an EPA-approved Wellhead Protection Program for water being drawn for public use, as defined for public use by the Safe Drinking Water Act, as amended.

Areas, such as aquifer protection areas, surrounding shallow aquifer areas, and water source protection districts are **not** public wellhead protection areas. Acreage within these areas is **not** eligible to be enrolled under the wellhead protection area provisions.
B Eligibility Requirements for Cropland Within Wellhead Protection Areas (Continued)

States that do not have an EPA-approved Wellhead Protection Program shall **not** enroll acreage in CRP under the wellhead protection area provisions. Contact the State water quality agency:

- to determine if there is an EPA-approved Wellhead Protection Program
- for approved public wellhead protection areas.

Before **cropland** acreage within an approved public wellhead protection area may be determined acceptable for enrollment under continuous signup, **all** of the following **must** be met:

- all of the requirements of subparagraph A
- all of the acreage **must** be located within or immediately adjacent to the approved public wellhead protection area
- the acreage shall not exceed a radius of 2,000 feet from the approved public wellhead.

**Exception:** Enrollment may be allowed beyond a radius of 2,000 feet from the approved public wellhead, provided the State has established hydrologically delineated public wellhead protection areas using a 5-year or 10-year time-of-flow criteria and the State water quality agency has approved the hydrologically delineated public wellhead protection area.

At least 51 percent of the acreage offered must be located within an approved public wellhead protection area. The remaining 49 percent must be contiguous to the approved public wellhead protection area. The remaining acreage must be contiguous to the offered acreage.
**B Eligibility Requirements for Cropland Within Wellhead Protection Areas (Continued)**

*-- If using a shapefile in TERRA to determine the percentage of acreage within the approved public wellhead protection area, the shapefile must contain the following attributes:

- FID
- shape
- type
- name
- code.

**Important:** Submit the complete shapefile to David Taylor by e-mail at david.taylor@wdc.usda.gov.

**Example:** The following is an example of the attributes.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Length</th>
<th>Data Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>FID</td>
<td>Object ID</td>
<td>Default</td>
<td></td>
</tr>
<tr>
<td>Shape</td>
<td>Polygon</td>
<td>Default</td>
<td></td>
</tr>
<tr>

<td>CREP</td>
</tr>
<tr>
<td>Name</td>
<td>Text</td>
<td>255</td>
<td>Ohio River Basin</td>
</tr>
<tr>
<td>Code</td>
<td>Text</td>
<td>10</td>
<td>orb</td>
</tr>
</tbody>
</table>

**Examples:** The approved public wellhead protection area designated by the appropriate State agency is a 1,000 foot radius surrounding the approved public wellhead. Therefore, the acreage enrolled in CRP shall not exceed the acreage within the 1,000 foot approved area.

The approved public wellhead protection area designated by the appropriate State agency is a 3,000 foot radius surrounding the approved public wellhead. Therefore, the acreage enrolled in CRP shall not exceed the acreage within a 2,000 radius from the approved public wellhead.

See subparagraph 66 C for a list of eligible practices for cropland within approved public wellhead protection areas.
Eligibility Requirements (Continued)

C Eligibility Requirements for Marginal Pasture Land

For CREP eligibility, marginal pasture land must be along stream segments approved by the FSA State Committee and Washington Conservation Commission in accordance with the paragraph IV A of the CREP Agreement, and WA Exhibit 26.

Marginal pasture land is eligible for enrollment, including CREP enrollment, if it is:

- suitable for the establishment of a riparian buffer planted to trees, as determined by the technical agency
- suitable for use as pasture.
- not classified as cropland according to Handbook 3-CM.

Marginal pasture is not defined by its productivity. Pastures do not have to be marginally productive to be eligible.

Marginal pasture eligibility is not based on definitions that may be provided in other programs.

If trees are already established and functioning as a riparian buffer, the land is not eligible for the continuous CRP or CREP. If existing trees do not meet NRCS stocking levels, and the land is not functioning as a riparian buffer, the land is eligible for the continuous CRP or CREP, provided all other eligibility requirements are met.

For CREP in western Washington, land shall be considered to be functioning as a buffer if all the following apply:

- The existing stand has at least the density described in national Exhibit 11, WA Page 94.
- At least one shrub component exists.
- Where the site will support conifers, at least 30 percent of the existing stand is conifers.

Land that cannot meet the riparian buffer standard in accordance with 2-CRP, Exhibit 11 is not eligible for enrollment. This includes land that has an obstruction between it and the eligible stream, such as a dike, road or railroad.

Producers must offer land that meets at least the minimum width specified in Exhibit 11. Offers that do not include the minimum required width are not eligible. Minor exceptions to the minimum width are acceptable if the buffer will be functional as determined by NRCS or CD.
C Eligibility Requirements for Marginal Pastureland

The following is not eligible to be enrolled in CRP as marginal pastureland:

- cropland
- forestland
- woodland.

Under no circumstances can land be considered both cropland and marginal pastureland. See 3-CM, paragraph 26, for provisions for removing land from cropland status to be enrolled in CRP under marginal pastureland criteria to be devoted to CP22, CP29, and CP30.

All of the following must be met before marginal pastureland, including grazing land that may not have been previously seeded, may be determined acceptable for enrollment under continuous signup:

- the marginal pastureland offered must be both of the following:
  - immediately adjacent and parallel to 1 of the following:
    - perennial stream
    - seasonal stream
    - permanent water body, such as a lake or pond, that provides at least a seasonal flow of surface water from the water body off the farm

  **Exception:** A pond that is less than 5.0 acres and does not provide at least a seasonal flow of surface water from the water body off the farm is not eligible to be enrolled in CP22.

  **Notes:** Water bodies that do not provide a permanent water cover throughout the year in all years are not eligible.

  See subparagraph E and Exhibit 2 for definitions of perennial and seasonal streams.

- devoted to a riparian buffer (planted or natural regeneration), wildlife habitat buffer, or wetland buffer

**Important:** Trees must be immediately adjacent and parallel to the eligible perennial or seasonal stream or other eligible permanent water body. See subparagraph D and Exhibit 11.
C Eligibility Requirements for Marginal Pastureland (Continued)

•*--COC or CED determines all of the following:--*

  • producer eligibility requirements in Part 6, Section 1, are met

  • land offered is marginal pastureland

  **Important:** Land that meets the definition of cropland shall not be enrolled in CRP as marginal pastureland. See 3-CM for the definition of cropland.

  • program policy and size requirements of the riparian buffer practice provided in Exhibit 11 are met

  • NRCS or TSP determines all of the following:

    • land is suitable to be devoted to a riparian buffer (planted or natural regeneration) to trees, wildlife habitat buffer, or wetland buffer

    • riparian buffer, wildlife habitat buffer, or wetland buffer is needed and feasible to solve the resource concern

    • purpose of the practice according to Exhibit 11 is met

    • existing trees on the offered land, if applicable, are not functioning as a riparian buffer

  **Important:** See subparagraph D for eligibility criteria for marginal pastureland with existing trees.

  • producer offers a per acre rental rate that is less than or equal to the calculated maximum payment rate using the applicable marginal pastureland rental rate for the county. Offers in excess of the maximum payment rate shall be rejected.

  **Note:** See paragraphs 196 and 212 for calculating maximum payment rate for marginal pastureland.
Marginal Pastureland and Trees

Land enrolled under the marginal pastureland eligibility criteria must be devoted to a riparian buffer devoted (planted or natural regeneration) to trees. Trees must be immediately adjacent and parallel to the eligible stream or water body regardless of FOTG standards. Marginal pastureland that is not suitable for tree plantings as determined by NRCS or TSP, as applicable, is not eligible to be enrolled as CP22. The marginal pastureland may be eligible to be enrolled as CP29 or CP30.

If trees are already established and functioning as a riparian buffer, as determined by NRCS or TSP, the land is not eligible to be enrolled in CP22.

If the existing trees are not functioning as a riparian buffer because of the presence of livestock, the land is not eligible to be enrolled in CRP. Other programs, such as EQIP or WHIP, may be used to exclude the livestock and restore the functions of the riparian buffer.

Example 1: Mary Smith offers to enroll marginal pastureland to be devoted to CP22. Based on a site visit, NRCS or TSP determines that the existing trees and vegetative cover would function as a riparian buffer if the livestock would be excluded from the site. No further action would be required for the existing cover to function as a riparian buffer. Therefore, the land is not eligible to be enrolled in CRP.

Example 2: Bob Brown offers to enroll marginal pastureland to be devoted to CP22. Based on a site visit, NRCS or TSP determines that the existing trees are not functioning as a riparian buffer because of the presence of livestock and the lack of a sufficient understory. The existing trees will not function as a riparian buffer by excluding the livestock. Additional vegetation must be planted to establish a functioning riparian buffer. Therefore, provided all other eligibility requirements are met, the land may be enrolled in CRP to be devoted to CP22.

If NRCS or TSP determines that existing trees are not functioning as a riparian buffer, the conservation plan must require some action by the producer, such as tree planting; otherwise, the land is not eligible to be enrolled in CRP.
E Perennial and Seasonal Streams

The following definitions shall be used for filter strip, riparian buffer, wildlife habitat buffer, or wetland buffer enrollment:

- **perennial stream** is a stream that contains water throughout the year
- **seasonal stream** is a stream that contains water for only part of the year but more than just during and/or after rainfall or snowmelt.

**Note:** Streams must have a defined stream channel.

**Important:** Because the same map symbol may be used for multiple stream types, USGS maps shall not be solely used to determine seasonal streams.

Only marginal pastureland, including grazing land that may not have been previously seeded to be devoted to a riparian buffer (CP22), wetland buffer (CP29), or wildlife habitat buffer (CP30), is eligible to be enrolled.

Seasonal streams do not include any of the following:

- wetland of any type
- land devoted to CP9
- terrace channels
- grass or sod waterways
- gullies
- narrow or wide wash
- roadside ditches
- well, spring, or seep
- marsh or swamp
- center pivot irrigation corners
- irrigation canals
- tail water recovery pit/system.
181 Eligibility Requirements (Continued)

F Expiring Continuous Signup Land Eligibility

*--Re-enrolled continuous practices are limited to the size restrictions in Exhibit 11.

Example: A re-enrolled CP21, grass filter strip, is limited to a minimum width of 20 feet and a maximum average width of 120 feet. If an expiring CP21 is 400 feet wide, the maximum width that can be re-enrolled is 120 feet unless the TSP determines a wider width is needed to meet the minimum design standard for the site.

SIP is not authorized for land that is currently under any form of CRP contract and is being re-enrolled. A CRP offer that includes any re-enrolled land along with new land is not eligible for a SIP on any of the offered acreage.

Note: All CCRP land offered on a tract which will have the same contract start and end dates must be offered in one contract.--*
F   Expiring Continuous Signup Land Eligibility

Cropland and marginal pastureland that is currently under CRP contract may be re-offered for CRP no earlier than 6 months before CRP-1 is scheduled to expire. In addition to meeting the eligibility requirements of paragraph 151 and subparagraph 181 A, cropland must meet the current practice standards for the practice according to Exhibit 11.

Cropland that was previously enrolled in CRP but has expired or was terminated is eligible to be enrolled under continuous signup contracts if it meets all other eligibility requirements, including needed and feasible criteria.

Note:  Land that is currently under contract or has expired and the cover has been maintained is not eligible for SIP.

The following are eligible land examples for expiring CRP when the offer is submitted before expiration.

Example 1:  CP21 is expiring and is re-offered. The average width of the practice is 80 feet. The technical agency or TSP recommends the practice should be an average width of 100 feet to meet current practice standards. The participant may re-enroll the practice provided the average width enrolled is 100 feet according to an approved conservation plan. C/S and PIP may be authorized for the additional average width required to meet the current practice standard.

Note:  If the technical recommendation was for a width less than enrolled, only the lesser width would be eligible.

Example 2:  Expiring general signup CRP-1 includes a tree practice such as CP3, CP3A, or CP11. The participant re-offers part or all of the applicable acreage as a continuous signup practice such as CP22 or CP31. CRP-1 is in compliance and NRCS or TSP determines the practice meets the current standards for the practice. COC or CED may approve CRP-1. SIP and PIP are not authorized.
F  Expiring Continuous Signup Land Eligibility (Continued)

Example 3: Expiring general signup CRP-1 with 1 or more practices such as CP1, CP2, CP4D, CP10, or CP11 that includes wetland restoration as part of CRP-1. The participant re-offers the restored wetland as an applicable continuous practice such as CP23, CP23A, CP27, CP28, CP31, or CP37 according to procedure. CRP-1 is determined in compliance and NRCS or TSP determines the practice meets practice standards. COC or CED may approve CRP-1 and conservation plan. SIP and PIP are not authorized.

Example 4: Producer offers an expiring CP21 as practice CP21 that is an average of 80 feet in width. The producer also requests to enroll land adding an average width of 40 feet to reach the maximum average width allowed according to current FOTG standards (up to an average width of 120 feet). NRCS or TSP recommends that the practice meets the practice standards at the 80-foot average width. COC or CED may accept an offer and approve CRP-1 and practice at the 80 foot average width. An offer of additional land to an existing buffer practice is not authorized because the current width is addressing the conservation issue. SIP and PIP are not authorized.

*--Land under an expiring CRP-1 is considered basically eligible to be reoffered for enrollment into CREP. The CREP agreement provisions apply to any new or expiring land offered into CREP.

Notes: Enrollment in CREP may require participant action to meet CREP agreement requirements.

Otherwise eligible land not currently enrolled may be added to adjacent CRP-1 acreage to meet current practice standards under the CREP project’s practices, according to the CREP agreement and FSA’s 2-CRP State supplement, as determined by NRCS or TSP.--*
F  Expiring Continuous Signup Land Eligibility (Continued)

The following are eligible land examples for expiring CRP when the offer is submitted for enrollment into CREP before expiration.

**Example 1:** An expiring continuous signup CRP-1 with practice CP21, Filter Strips, is offered as practice CP21 under a contract to be enrolled into CREP. The average width of the practice is 120 feet. NRCS or TSP determines the practice should be an average width of 160 feet to meet current CREP practice standards. The participant may enroll the practice and additional adjacent new land provided the average width enrolled is 160 feet according to an approved conservation plan of operations. Cost share and a practice incentive payment may be paid for the additional land required to meet the current 2-CRP practice standard for CRP-1’s for the CREP.

**Note:** If NRCS or TSP determine that a width less than the 160 feet is needed, then only the lesser width would be eligible for enrollment/re-enrollment.

**Example 2:** Participant offers expiring CRP acreage as an eligible CREP practice. The practice is in compliance and is determined as meeting current practice standards. The participant requests to revise the conservation plan and add a 5 species seeding mix as an interseeding or re-seeding to provide enhanced wildlife habitat benefits. COC or CED may approve CRP-1 and the conservation plan; however, since the existing practice and vegetative cover meet the CREP agreement 2-CRP standards, no additional cost share expense is necessary and COC or CED will not approve cost share payments or practice incentive payments.

G  Lands Ineligible for Re-Enrollment Under Continuous CRP

Lands ineligible for re-enrollment are:

- land not currently enrolled and not necessary to meet current practice standards for the existing practice according to Exhibit 11

***
G Lands Ineligible for Re-Enrollment Under Continuous CRP (Continued)

- expiring *land permanently inundated with water* according to subparagraph 151 D.

**Note:** *Land permanently inundated with water* is land that is reasonably expected to be under water through the CRP-1 period.

**Exception:** Practices that include water as part of the practice, as applicable, are eligible, such as CP3A, CP9, CP23, CP23A, CP27, CP30, CP31, and CP37.

*--Land under expiring CRP contract that is *ineligible* for CREP enrollment includes:

- land under expiring CRP-1’s for which there are provisions in the CREP agreement that exclude expiring CRP-1 acreage for enrollment

- land under expiring CRP-1 which does *not* meet the basic land, producer, and practice eligibility requirements as provided for in the CREP agreement

- cropland acres that are subject to an easement, or designated to be subject to an easement that prohibits crop production at any time during the proposed new CRP-1 period

- marginal pastureland acres that are subject to an easement, or designated to be subject to an easement that requires a resource-conserving cover be maintained during any of the proposed new CREP CRP-1 period

- land permanently inundated with water according to this subparagraph.~*~

H Acreage Ineligible To Be Enrolled

See subparagraphs 151 C and D for ineligible acreage.
182 Infeasible to Farm

A Definition of Infeasible to Farm

Infeasible to farm means an area that is too small or isolated to be economically farmed.

B Infeasible-to-Farm Policy

COC may allow enrollment of certain cropland that is determined infeasible to farm.

Note: Infeasible to farm criteria does not apply to marginal pastureland.

Producers may enroll up to 25 percent of the enrolled cropland acreage of a filter strip or riparian buffer as part of the filter strip or riparian buffer if COC determines the following:

- remaining cropland is infeasible to farm according to subparagraph 182 A
- more than 50 percent of the field is enrolled as a filter strip or riparian buffer on cropland.

Note: COC is authorized to enroll only up to 25 percent of the filter strip or riparian buffer as infeasible to farm acreage. Producers may request a waiver to enroll infeasible to farm acreage in excess of 25 percent. Waivers should be submitted to DAFP.

Example: Producer enrolls a 4.0 acre riparian buffer in field No. 1 and a 3.0 acre riparian buffer in field No. 2. Field No. 2 has 1.0 acre remaining. The producer enrolled more than 50 percent of each field. The remaining portion of Field 1 not enrolled as a buffer is .5. The infeasible-to-farm amount is 25 percent of the enrolled riparian buffer (4.0 acres x .25 = 1.0 acre). Therefore, the producer could enroll the remaining portion if that portion of the field is 1.0 or less. The .5 remaining portion of field No. 1 is eligible to be enrolled in CRP using infeasible-to-farm criteria.
B Infeasible-to-Farm Acres (Continued)

The remaining portion of Field 2 not enrolled as a buffer is 1.0 acre. The infeasible-to-farm amount is 25 percent of the enrolled riparian buffer (3.0 acres x .25 = .8 acre). The producer could enroll the remaining portion if that portion of the field is .8 or less. Therefore, the 1.0 acre portion remaining in field No. 2 is limited to .8 acre to be enrolled in CRP using infeasible-to-farm criteria.

C Payment Rate

Cropland enrolled as a filter strip or riparian buffer under infeasible-to-farm criteria shall be calculated according to paragraph 196.

Note: Continuous signup incentives do not apply.

183-195 (Reserved)
Section 2 Continuous Signup Non-C/S Payments

196 Annual Payments (Continued)

A Per Acre Maximum Payment Rate (Continued)

The marginal pasture land rental rate for Washington counties are provided in WA Exhibit 17. All Washington counties have separate marginal pasture land rental rates for land along perennial and seasonal streams.

For CREP, the marginal pasture rental rates in WA Exhibit 17 shall not be used. CREP maximum payment rates shall be determined using the most current soil rental rates (SRR) for the three predominant soils for both cropland and marginal pasture land.
A Per Acre Maximum Payment Rate

Before CRP-1 is completed, the County Office shall calculate and inform the producer of the per acre maximum payment rate for the eligible acreage being offered on CRP-2C. Producers may offer a per acre rental rate less than the calculated per acre maximum payment rate.

The per acre maximum payment rate shall be determined for:

- cropland, using all of the following:
  - the most current SRR’s for the 3 predominant soils on the eligible acreage offered

  **Note:** For infeasible-to-farm acreage, the most current SRR for the 3 predominant soils on the infeasible-to-farm acreage.

- an incentive (10 percent or 20 percent depending on the practice) of the per acre weighted average SRR, if applicable, established according to subparagraph B

  **Exception:** Continuous signup incentives do not apply to land enrolled using infeasible-to-farm criteria.

- a maintenance incentive rate established according to subparagraph C
A Per Acre Maximum Payment Rate (Continued)

- marginal pastureland, using all of the following:
  - the applicable marginal pastureland rental rate for the county regardless of soil type
  
  **Important:** For counties that have 2 marginal pastureland rental rates established, the marginal pastureland rate will be determined based on the type of stream (perennial or seasonal) or eligible permanent water body adjacent to the land offered. See subparagraph 181E and Exhibit 2 for perennial and seasonal streams.

- an incentive of 20 percent of the applicable marginal pastureland rental rate

*--Exception:* Land previously enrolled in CRP under WBP eligibility criteria is not eligible for a 20 percent incentive.--*

- a maintenance incentive rate established according to subparagraph C.

See subparagraph D for calculating the per acre maximum payment rate.
Annual Payments (Continued)

B Per Acre Maximum Payment Rate Additional Incentive

For CREP, the rental incentive rate shall be as follows.

- CP21 – 50 percent
- CP22 (Hedgerow) – 75 percent
- CP22 (Riparian Buffer), CP23, CP23A, CP30 – 100 percent
- For land designated as agricultural land of State significance – 10 percent.

In addition to the incentives listed for each practice, land designated under the State Growth Management Act (RCW 36.70A.170) as “agricultural land of State significance” will be paid an additional 10 percent incentive rate above the practice incentive. WA Exhibit 23 provides guidance on determining if land is designated as agricultural land of State significance.

Example: Land enrolled in the CP22 (Riparian Buffer) practice that is designated agricultural land of State significance will receive a total incentive rate of 110 percent.

Note: FSA must maintain documentation to justify use of the 10 percent incentive for each contract.
B  Per Acre Maximum Payment Rate Additional Incentive

For the following continuous signup practices, including re-enrolled practices, an additional incentive amount equal to 20 percent of the weighted average SRR shall be added to the weighted average SRR:

- CP5A
- CP8A
- CP21
- CP22
- CP23
- CP23A
- CP27
- CP28
- CP29
- CP30
- CP31
- CP37
- CP39
- CP40
- CP41.

*--Exception:* Land previously enrolled in CRP under WBP eligibility criteria is not eligible for the 20 percent incentive.--*

**Important:** For marginal pastureland devoted to CP22, CP29, and CP30, the additional incentive amount is equal to 20 percent of the applicable marginal pastureland rental rate.
B Per Acre Maximum Payment Rate Additional Incentive (Continued)

For land within approved public wellhead protection areas, an additional incentive amount equal to 10 percent of the weighted average SRR shall be added to the weighted average SRR.

Note: Practices CP1, CP2, CP3, CP3A, CP4B, CP4D, and CP10 are eligible within an approved public wellhead protection area only. See subparagraph 66D.

*--Important: CP10 is only eligible for enrollment before March 14, 2011.--*

The 10 percent and 20 percent additional incentives are not additive.

Example 1: Producer offers 3 acres to be devoted to a field windbreak. The 3 acres are located within an approved public wellhead protection area. The per acre incentive amount would equal 20 percent of the weighted average SRR because of the practice offered (CP5A).

Example 2: Producer offers 3 acres within an approved wellhead protection area with 2 acres to be devoted to CP1 and 1 acre to be devoted to a field windbreak. The County Office may complete separate CRP-2’s for each practice or calculate a weighted average incentive percentage using 20 percent for the 1 acre devoted to a field windbreak and 10 percent for the 2 acres devoted to CP1. See paragraph 212.

See subparagraph D for calculating the per acre maximum payment rate.

C Per Acre Maintenance Rates for Continuous Signup Practices

Per acre maintenance incentive rates shall be established to reimburse participants for the average annual cost of practice maintenance. Maintenance rates:

- may be established by geographic area, practice type, or other criteria

- above $0 shall only be established when the participant will be required to perform substantial maintenance on the acreage enrolled for continuous signup practices CP5A, CP16A, CP17A, CP21, CP22, CP29, and CP30 according to this subparagraph.
C Per Acre Maintenance Rates for Continuous Signup Practices

For Washington CREP as SAFE, the maintenance rates specified in national procedure apply.

The maintenance rate initially approved for a contract shall apply to any subsequent revisions to that contract. If the acreage is re-enrolled following expiration of the current contract, the maintenance rate shall be the authorized rate at the time the re-enrolled contract is approved.
C Per Acre Maintenance Rates for Continuous Signup Practices (Continued)

STC’s, upon State Technical Committee recommendation and with NRCS consultation, shall establish a per acre maintenance rate:

- not to exceed $2 per acre for new CP5A, CP16A, and CP17A

**Note:** The revised maintenance incentive applies to all new offers except for CREP. CREP related maintenance incentives are governed by approved CREP agreements.

- according to the following for the following new practices.

<table>
<thead>
<tr>
<th>IF the practice is...</th>
<th>AND it includes...</th>
<th>THEN the maintenance rate shall not exceed...</th>
</tr>
</thead>
<tbody>
<tr>
<td>CP21, CP29, or CP30</td>
<td>no fencing or water facility development</td>
<td>$0</td>
</tr>
<tr>
<td></td>
<td><strong>permanent</strong> fencing with no water facility development</td>
<td>$4</td>
</tr>
<tr>
<td></td>
<td><strong>permanent</strong> fencing and water facility development</td>
<td>$5</td>
</tr>
<tr>
<td>CP22</td>
<td>no fencing or water facility development</td>
<td>$2</td>
</tr>
<tr>
<td></td>
<td><strong>permanent</strong> fencing with no water facility development</td>
<td>$4</td>
</tr>
<tr>
<td></td>
<td><strong>permanent</strong> fencing and water facility development</td>
<td>$5</td>
</tr>
</tbody>
</table>

**Note:** The maintenance incentive applies to all new offers except for CREP. CREP related maintenance incentives are governed by approved CREP agreements.

STC’s shall ensure that the basis for the maintenance rates is clearly documented in the STC minutes.
C Per Acre Maintenance Rates for Continuous Signup Practices (Continued)

COC shall ensure that conservation plans include:

- provisions for the maintenance of the approved cover and practices
- the applicable components for the maintenance rate provided.

**Important:** Single strand electric fence is not considered a permanent fence for CRP. Components must be maintained for the life of CRP-1.

D Calculating Per Acre Maximum Payment Rates

The formula to calculate the per acre maximum payment rate for continuous signup offers for:

- cropland is:

  \[(\text{weighted average SRR per acre}) + (\text{additional incentive (10 or 20 percent as appropriate) of weighted average SRR per acre}) + (\text{applicable maintenance rate per acre})\]

  **Note:** The applicable incentive percentage is based on the practice offered. See subparagraph B.

- marginal pastureland is:

  \[(\text{applicable marginal pastureland rental rate per acre}) + (\text{additional incentive (20 percent) of applicable marginal pastureland rental rate per acre}) + (\text{applicable maintenance rate per acre})\]

  **Important:** County Offices shall complete separate CRP-2C’s and CRP-1’s for marginal pastureland. See paragraphs 211 and 212.

  **Exception:** Continuous signup incentives do not apply to land enrolled using infeasible-to-farm criteria.

  **Note:** Infeasible-to-farm does not apply to marginal pastureland.
E Washington State Annual Maintenance Payment for CREP – Eligible Producers

All CREP participants are eligible for the annual maintenance payments.

The maintenance payments will be issued to the participants that incur the maintenance costs, the same as cost share payments.

F Washington State Annual Maintenance Payment for CREP – Eligible Costs

The following items are eligible for maintenance payments:

- labor and materials necessary to maintain the practice to specifications, such as:
  - personal or hired labor
  - equipment for mechanical weed control
  - herbicides
- plastic mulch/weed mats in areas with more than 25 inches of annual rainfall

Note: This component is eligible for FSA cost shares, State 10% cost shares and PIP in areas with less than 25 inches of rainfall. The component is not eligible for FSA cost share or PIP payments in greater than 25 inch rainfall areas, but will be covered by State maintenance payments.

- the amount of re-establishment costs for failed vegetation, fences, livestock water and livestock crossings, not covered by a PIP.

Note: PIP’s are a one-time payment, and will not be issued for re-establishment costs. Maintenance funds will be used to cover 40 percent of the eligible costs of re-establishment. In this case, the maintenance payment will be calculated the same as a PIP payment would be. See subparagraph 197 B.

G Washington State Annual Maintenance Payment for CREP Eligible Years

Annual maintenance payments will be issued for up to 5 years from the establishment date. For this purpose, the establishment date will be the date the producer has installed all cost shared components the first time. Maintenance activities completed within 5 years from this date May be eligible for payment.
H Washington State Annual Maintenance Payment for CREP Payment Calculation

Maintenance payments will equal 100 percent of the eligible costs incurred by participants for maintaining their CREP cover, fencing, livestock water and livestock crossings. Payment limits established by the Washington Conservation Commission or Conservation District may apply. Participants must submit cost data, such as receipts, time sheets or self-cost statements. This cost data will be reviewed by the Conservation District to determine which costs are eligible. The District will issue a maintenance payment equal to 100 percent of the eligible costs.

Maintenance payment will not be reduced by the amount of the maintenance payment included in FSA’s annual rental payment calculation.

I Washington State Annual Maintenance Payment for CREP – Processing Cost Documentation

Participants will be instructed to submit all cost documentation for cover establishment to FSA. FSA will calculate FSA and State cost shares and report State cost share amounts to Conservation Districts. When cost documentation is submitted to FSA that is eligible for reimbursement under annual maintenance payments, FSA will forward this documentation to the District for payment. FSA offices must insure that no costs are reimbursed under both cost sharing and maintenance payments. Any cost documentation that includes items eligible for both cost sharing and maintenance must be clearly marked before forwarding to the Conservation District, to identify which items are being reimbursed under cost sharing.

When all cost sharing and the PIP have been issued, FSA will notify the participant and the Conservation District of this fact, and instruct the participant to submit future cost documentation for maintenance payments directly to the District.

Note: There may be situations where the practice fails after all cost sharing and the PIP have been paid. In this case, the Conservation District and FSA will need to coordinate activities to ensure re-establishment costs are properly covered from cost sharing and maintenance payments and duplication of payments does not occur.

J Washington State Annual Maintenance Payments for CREP – Payment Administration

Participants may request partial maintenance payments. The amount and frequency of each maintenance payment will be determined by the Conservation District.

*K Washington State Annual Maintenance Payments for CREP – Mid-Contract Management

State maintenance funds can be used to issue a 50% cost share, in additional to FSA mid-contract management cost share, up to the limits in paragraph 512.--*
197  One-Time Payments

A  CRP-SIP

CRP-SIP is authorized for CREP.

CRP-SIP is authorized for SAFE.

*--SIP is not authorized if any land included in a contract is expiring CRP, CCRP, SAFE or CREP, or is expired CRP, CCRP, SAFE or CREP where the cover has been maintained.

Example: A producer with an expiring CP21 practice offers the same land for re-enrollment. He includes in the offer a CCRP practice on another field that was not previously in CRP. Because the new contract will include land that was previously in CRP, no SIP can be earned on any acreage in the contract.

Note: All CCRP practices offered on the same tract with the same contract start and end dates must be included in one offer and enrolled on the same CRP-1.--*
A CRP-SIP

CRP-SIP is a one-time incentive payment made to participants that enroll certain practices after all of the following are met:

- CRP-1 is approved
- AD-1026 has been completed and signed
- Certification of compliance with 1-PL or 4-PL, as applicable.

Exception: CRP-SIP is not authorized for re-enrolled continuous, FWP practices, or infeasible to farm acres.

Note: Land that is currently under contract or has expired, and the cover has been maintained, is not eligible for SIP.

Important: CRP-SIP’s shall not be made until all eligibility determinations have been made according to 1-PL or 4-PL, as applicable.

Participants that enroll practices CP5A, CP8A, CP16A, CP17A, CP21, CP22, CP23, CP23A, CP27, CP28, CP29, CP30, CP31, CP33, CP36, CP37, CP38A-E, CP39, CP40, CP41, or *--CP42 (continuous signup only) may receive CRP-SIP.--*

Important: CRP-SIP is not applicable to any other practice.
A CRP-SIP (Continued)

CRP-SIP is a one-time payment of $10 for each eligible acre enrolled for each full year of CRP-1. CRP-SIP is calculated by multiplying the number of eligible acres enrolled times the number of full years, not to exceed 10 years, of CRP-1 multiplied times $10.

Exception: For practices CP23, CP23A, CP33, and CP42, CRP-SIP is calculated by multiplying the number of eligible acres enrolled times the number of full years, not to exceed 10 years, of CRP-1 multiplied times $15.

Note: CREP related maintenance incentives are governed by approved CREP agreements.

Examples: If CRP-1 is:

- 10 years and 7 months in length, CRP-SIP is calculated using only 10 years
- 12 years and 3 months in length, CRP-SIP is calculated using only 10 years.

The following provides additional information and examples for calculating CRP-SIP’s.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
</table>
| 1    | Determine the number of acres enrolled that are eligible for CRP-SIP. Only certain practices are eligible for CRP-SIP.  
**Example:** Producer enrolls 5 acres to be devoted to CP22 and 10 acres to be devoted to CP18B on the same tract. The duration of CRP-1 will be 10 years and 7 months. CRP-SIP is applicable only to the 5 acres of CP22. |
| 2    | Determine the number of full years of CRP-1. CRP-SIP is made for full years of CRP-1 only.  
**Important:** Always truncate part years of CRP-1’s.  
**Example:** Using the CRP-1 in step 1, there are 10 full years in the approved CRP-1. Therefore, 10 years will be used to calculate CRP-SIP. |
| 3    | Multiply the result of step 1 times the result of step 2 times $10.  
**Example:** Using the results of the examples in steps 1 and 2, the one-time CRP-SIP is $500 = 5 acres x 10 years x $10. |
A CRP-SIP (Continued)

CRP-SIP shall be:

- a one-time payment only
- rounded to the nearest whole dollar, see paragraph 462
- subject to the prompt payment provisions, see paragraph 462
- divided among participants according to the shares on CRP-1
- subject to the CRP $50,000 FY payment limitation, see paragraph 461
- issued according to I-FI * * *
- refunded if CRP-1 is terminated, see paragraph 571
- offset, if applicable, see paragraph 465
- assigned, if applicable, see paragraph 465
- based on a 10-year contract only.

Note: The revision to SIP applies to all new offers except for CREP. CREP-related * * * incentives are governed by approved CREP agreements.

CRP-SIP is a separate payment from all of the following:

- annual rental payment
- C/S payment
- PIP
- CP23 one-time incentive payment for CRP-1’s approved before November 3, 2008.
B PIP

PIP is a one-time incentive payment made to participants that enroll land in CRP to be devoted to continuous signup practices after all of the following are met:

- CRP-1 is approved
- AD-1026 has been completed and signed
- participant signs AD-245, page 2, and reports completion of practice
- technical agency or producer certifies performance on AD-862
- all necessary documents to calculate total C/S amount are obtained
- certification of compliance with 1-PL or 4-PL, as applicable.

PIP is:

- authorized for re-enrolled continuous signup practices only if new C/S is approved
- not authorized for infeasible to farm acres.

Important: PIP’s shall not be made until all eligibility determinations have been made according to 1-PL or 4-PL, as applicable.

PIP is a one-time incentive payment:

- applicable to all continuous signup practices, including re-enrolled continuous signup practices, except CP15B

Notes: See subparagraph 66 D for eligible practices for continuous signup.

*--CREP related incentives are governed by approved CREP agreements.--*

- equal to 40 percent of the total eligible cost of practice installation.

Important: Do not include ineligible costs when calculating PIP.

Note: Partial PIP payments are not authorized.
197 One-Time Payments (Continued)

B PIP

See subparagraph 197A for STC policy on issuing PIP payments to members of the Combined State Entity.

PIP is applicable to CREP and SAFE. CREP and SAFE participants shall be issued PIP payments in accordance with 2-CRP procedure.

For continuous CRP, CREP and SAFE, PIP’s shall be calculated by multiplying AD-862, item H 2, Cost-Share, times 80 percent. Item H 2 on the AD-862 equals the Total Cost-Share Earned amount on the final AD-245 for the contract.

Examples:

Producer A’s total cost of installing the practice is $3,000. Producer A received $1,000 from an ineligible contributor. The producer received a cost share payment of $1,000 ($2,000 times 50 percent). AD-862, item H 2 is $1,000. The PIP equals $800 ($1,000 times 80 percent).

Producer B claims total installation costs of $5,000. Because some components are paid as flat rates based on costs lower than the producer incurred, the total cost share is $2,000, which is less than 50 percent of the producer’s claimed costs. The PIP equals $1,600 ($2,000 times 80 percent), which is less than 40 percent of the producer’s claimed costs.

Producer C claims total installation costs of $1,000. Because some components are paid as flat rates based on costs higher than the producer incurred, the total cost share is $700, which is more than 50 percent of the producer’s claimed costs. The PIP equals $560 ($700 times 80 percent), which is more than 40 percent of the producer’s claimed costs.

See WA Exhibit 29 for Washington State PIP Advance Loans under CREP.
B  PIP (Continued)

Determine the total eligible cost of practice installation. Do not include ineligible costs when calculating PIP. The following table provides additional information and examples for calculating PIP’s.

**Note:** PIP cannot exceed 100 percent of the producer’s out-of-pocket cost.

<table>
<thead>
<tr>
<th>Example No. 1</th>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1</td>
<td>Bob Smith enrolled 10 acres as CP22. The average cost to establish hardwood trees is $150 per acre for the needed components. Bob Smith submits an invoice that totals $200 per acre to establish the required components for the practice. The eligible cost used to determine C/S cannot exceed $150 per acre. The difference between the $200 per acre invoice and the $150 average cost is considered ineligible cost. Bob Smith received C/S of $750 (10 ac. x $150 = $1,500 cost x .50 = $750). AD-862, item H1, total eligible installation cost, is $1,500 and item H2, cost-share, is $750. Bob Smith receives 100 percent shares on CRP-1.</td>
</tr>
<tr>
<td></td>
<td>2</td>
<td>Multiply AD-862, item H2, cost-share, times 80 percent ($750 x .80 = $600). PIP is $600.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Example No. 2</th>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1</td>
<td>John Jones and Bob Smith enroll 5 acres to be devoted to CP22 and 10 acres to be devoted to CP18B on the same tract. John Jones total eligible cost to install CP22 and CP18B was $5,500. John Jones received $4,000 from the State Department of Natural Resources. John Jones’ out-of-pocket cost was $1,500. Bob Smith did not have any out-of-pocket cost. The value of the contribution from the State Department of Natural Resources plus John Jones out-of-pocket cost did not exceed the established eligible cost. John Jones received $1,500 C/S assistance ($5,500 x .50 = $2,750, limited to $1,500, John Jones out-of-pocket cost). AD-862, item H1, total eligible installation cost, is $5,500 and item H2, cost-share, is $1,500. John Jones and Bob Smith shares on CRP-1 are 50/50.</td>
</tr>
<tr>
<td></td>
<td>2</td>
<td>Multiply AD-862, item H2, cost-share, times 80 percent ($1,500 x .80 = $1,200). John Jones out-of-pocket cost was $1,500. PIP is limited to $1,200. John Jones’ PIP is limited to $600.</td>
</tr>
</tbody>
</table>
One-Time Payments (Continued)

B PIP (Continued)

PIP shall be:

- a one-time payment only, regardless if C/S is paid for reestablishment
- rounded to the nearest whole dollar, see paragraph 462
- subject to the prompt payment provisions, see paragraph 462
- divided among participants according to the shares on CRP-1
- subject to the CRP $50,000 FY payment limitation, see paragraph 461
- issued according to 1-FI * * *
- refunded if CRP-1 is terminated, see paragraph 571
- offset, if applicable, see paragraph 465
- assigned, if applicable, see paragraph 465.

PIP is a separate payment from all of the following:

- annual rental payment
- C/S payment
- CRP-SIP

*--CP23 one-time incentive payment for CRP-1’s approved before November 3, 2008, or according to approved CREP agreements.--*
A  Prorated Annual Rental Payment

All CRP annual rental payments are made after October 1 of each year of the contract period. All CRP-1’s must be for a minimum duration of 10 years and shall not exceed 15 years. See paragraph 213.

Because CRP-1’s for certain land enrolled through continuous signup may have an effective date other than October 1, the first year’s annual rental payment may be for less than a 12-month period.

B  Example of Prorated Annual Rental Payment

Producer offers land not currently enrolled in CRP for enrollment through continuous signup. The 10-year CRP-1 was approved by COC or CED on February 22, 2010, with an effective date of March 1, 2010. Because the CRP-1 effective date is March 1, 2010, the producer would receive CRP payments for 10 years and 7 months if all eligibility requirements were met.

The producer would receive a total of 11 annual payments. The first annual rental payment would be made after October 1, 2010, for the 7 months (March 1, 2010, through September 30, 2010) CRP-1 was effective in FY 2010. The prorated annual rental payment must be made through special processing. The remaining 10 annual rental payments would be made after October 1 of each applicable year through the normal payment process.

Important: All CRP annual rental payments, including first year prorated annual rental payments, shall be made after October 1 of the applicable year. See paragraph 462

199-210  (Reserved)
Section 3 Processing Continuous Signup Offers

211 Continuous Signup Process Information

A Receiving Continuous Signup Offers

Producers may submit offers of acreage for CRP at any time by submitting an offer on CRP-1 and CRP-2C. There is no deadline to submit an offer under continuous signup.

Note: A new signup number shall be used for each FY. See paragraph 171.

Offers must be submitted by tract. See 2-CM for a definition of a tract.

Producers shall:

- indicate the acreage and practice to be enroll in CRP
- identify the acreage offered on an aerial photograph
- indicate the per acre rental rate offered.

B Separate Offers

Separate CRP-1’s must be completed for:

- each CRP-2C completed
- practices with different lifespans.

Example: Producer offers 5 acres to be devoted to a filter strip with a 10-year lifespan and 3 acres to be devoted to a riparian buffer with a 13-year lifespan on the same tract. Only one CRP-2C is completed for the offer. However, separate CRP-1’s must be completed for each practice.
C Informing Producers

County Offices shall inform producers:

- CRP-1 (Exhibit 21) is a binding contract

- changes are not allowed on the preprinted portion of CRP-2C, CRP-1, or CRP-1 Appendix

- any changes to the data entered on CRP-2C, CRP-1, CRP-1 Continuation, or other CRP form must be initialed and dated by both the employee making the change and the producer

*--CRP-1 must be signed and dated by all required signatories before COC or CED may approve CRP-1

Note: See paragraph 335 for signature requirements.

- the total enrollment of cropland in CRP and DCP cannot exceed the total cropland on the farm

*--Note: See subparagraph 401 B.--*

- of provisions regarding CRP-1 effective date.

Note: See paragraph 213 for applicable CRP-1 effective dates for continuous signup.
D Withdrawing Offers and Acreage Modifications

For continuous signups, before CRP-1 is approved by COC or CED, producers may modify the offer in any way except changes to the following:

- practice offered to another practice that is not eligible for continuous signup
- rental rate per acre offered to exceed the calculated maximum payment rate.

Note: See paragraphs 171 and 181.

Producers who withdraw or modify acreage offered under continuous signup before CRP-1 is approved shall not be assessed liquidated damages.

Important: Liquidated damages are applicable after CRP-1 is approved.

If the producer modifies acreage offered after NRCS or TSP has completed CRP-2C, TSP shall review the changes and make adjustments where necessary.

A *** measurement service, if applicable, shall be completed for all acreage determined acceptable before CRP-1 is approved. See paragraph 401.

Exception: Any acreage currently enrolled that is being reoffered if the acreage was previously measured and official fields.
211 Continuous Signup Process Information (Continued)

*--E COC or CED Responsibilities

Before submitting CRP-2C to NRCS or TSP, COC or CED shall determine whether all eligibility requirements in paragraph 181 are met.

Exceptions: COC or CED shall not make a determination about:--*

• suitability of the acreage for the practice offered
• need and feasibility of the practice offered to solve the resource concern
• the eligibility of the per acre rental rate offered amount until maximum payment rate amount is calculated
• county cropland limit eligibility according to Part 4.

*--If all applicable eligibility requirements in paragraph 181 are not met, COC or CED shall:--*

• not submit CRP-2C to TSP
• use CRP-26 to inform producer the offer was not acceptable.

F TSP Responsibilities

NRCS or TSP shall, for every continuous signup CRP-2C received:

• complete a site visit to determine whether the:
  • land offered is suitable for the practice offered
  • practice offered is needed and feasible to solve the resource concern
  • existing cover is functioning as the practice offered

•* return completed CRP-2C’s to COC or CED to calculate maximum payment rate.---*
212 Completing CRP-2C for Continuous Signup

A Overview

For CREP, interested producers and landowners should be directed to the applicable FSA County Office to start the application by initiating a CRP-2C. If the Conservation District and County Office have arranged for the District to initiate the CRP-2C, the form shall be forwarded to FSA immediately to determine if any eligibility determinations are required at that time, such as cropping history. The CRP-2C can then be referred back to the District or NRCS to complete their portions of the form, namely the estimated acres and confirmation the land is eligible for CREP (items 11-13). When these determinations are complete, the form shall be returned to FSA. While the District or NRCS works with the applicant to develop a conservation plan FSA can assist them in establishing farm records if necessary, and completing the remaining eligibility forms. The CRP-2C shall be retained by FSA until the Conservation District or NRCS complete the conservation plan, at which time the CRP-1 will be generated by FSA.
Completing CRP-2C for Continuous Signup

A Overview

CRP-2C shall be completed for all acreage on which producers want to submit a request for enrollment. The document is used by FSA and NRCS or TSP to:

- make eligibility determinations
- calculate maximum payment rates
- obtain data and statistics on acreage offered for the program.

Notes: See paragraph 333 for completing CRP-2 for general CRP signups.

*--Offers containing both MPL and cropland with the same practice lifespans may be completed using one CRP-2C and CRP-1.--*

***

To be eligible to be enrolled in CRP, MPL must be devoted to a riparian buffer devoted (planted or natural regeneration) to trees, wildlife habitat buffer, or wetland buffer. See paragraph 181.

Important: Land that meets the definition of cropland shall not be enrolled in CRP as MPL. See 3-CM for the definition of cropland.
Completing CRP-2C for Continuous Signup (Continued)

B Completing CRP-2C

Complete CRP-2C for continuous signup according to the following table.

All item numbers, except item numbers 2, 3B, and 6, must be completed before producer signs CRP-2C. If an item number is not applicable to the offer, enter “N/A”. NRCS or TSP shall return all incomplete CRP-2C’s to FSA for completion.

**Note:** Before completing CRP-2C, the County Office shall ensure that the base limitation is not exceeded. See subparagraph 401B and 1-DCP, paragraph 64.

All changes to data entered on CRP-2C, including completion of item numbers 2 and 3B after producer signs CRP-2C, must be initialed and dated by both the employee making the change and the producer.

<table>
<thead>
<tr>
<th>Item</th>
<th>Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>14A</td>
<td>Enter the physical location.</td>
</tr>
<tr>
<td>14B</td>
<td>For offers that contain cropland only, enter the soil survey area ID number associated with the primary, secondary, and tertiary soil map unit symbols for the eligible acreage offered.</td>
</tr>
</tbody>
</table>

**Example:** A producer offers 20 acres for enrollment in CRP continuous signup. Five acres are determined ineligible for enrollment. Enter the soil survey ID number associated with the primary, secondary, and tertiary soil map unit symbols for the 15 eligible acres only.

*For offers that contain MPL only, enter the soil survey area ID number for the soil survey applicable for the eligible MPL offered.*

**Note:** MPL rental rates are not based on the soil survey.

*For offers with both cropland and MPL, at least 1 of the 3 soil survey ID number entries must include the applicable MPL soil survey area ID number.*

Primary, secondary, and tertiary soils, including MPL soil, must be based on the number of acres of each soil.

**Example:** The offer is for 20.0 acres with 15.0 acres of MPL soils and 5.0 acres of cropland soils. The primary soil would be 15.0 acres of MPL, and secondary soil is 5.0 acres of cropland soils.

**Note:** For offers with more than 3 predominant soils and MPL, exclude the tertiary soil and use the MPL rate in place of the tertiary soil.

| 14C  | For offers that are cropland only, enter the primary, secondary, and tertiary soil map unit symbols for the entire eligible acreage offered. For offers that are MPL only, if the county has:

- one MPL rental rate, enter “MPLALL”
- two MPL rental rates, enter:
  - “MPLSEA” if the eligible land offered is adjacent to a seasonal stream
  - “MPLPER” if the eligible land offered is adjacent to a perennial stream or other permanent water body.

**Important:** See subparagraph 171 C * * *.

B Completing CRP-2C (Continued)

<table>
<thead>
<tr>
<th>Item</th>
<th>Instructions</th>
</tr>
</thead>
</table>
| 16   | Complete item 16 only when an offer is being submitted for practices eligible for a per acre incentive, according to subparagraph 196 B. Enter the result of multiplying item 15 times the total acres in item 14D times the applicable percentage. If an offer contains practices eligible for differing incentive percentages, including offers containing practices not eligible for an incentive, the County Office may do either of the following:  
  • complete a separate CRP-2C for each practice  
  • calculate a weighted average incentive percentage.  

Note: Separate CRP-1’s must be completed:  
  • if separate CRP-2C’s are completed  
  • for practices with different lifespans.

Example: A producer’s offer includes 10 acres of CP1, located within an approved public wellhead protection area, and 5 acres of CP21. The weighted average SRR (item 15) for the offer is $40. The County Office calculates a weighted average incentive percentage by:
  • multiplying the number of acres offered for each practice times the applicable incentive percentage for that practice, according to subparagraph 196 B (10 X .1 = 1.0 for CP1 and 5 x .2 = 1.0 for CP21)  
  • dividing the resulting total by the total acres offered (round to 2 decimal places) (2.0 divided by 15 = 0.13).

The weighted average incentive percentage would be 0.13. The County Office would enter the result of multiplying the weighted average SRR (item 15) times the weighted average incentive percentage (0.13), rounded to 2 decimal places, in item 16. For this example, the County Office would enter $5.20 ($40 x 0.13) in item 16.

Notes: Infeasible to farm acres are not eligible for incentive payments.

*--MPL is not eligible for infeasible to farm.--*

| 17B  | For cropland offered as infeasible to farm acreage, enter the soil survey area ID number associated with the primary, secondary, and tertiary soil map unit symbols for the eligible infeasible to farm acreage offered.  

*--Note: For offers with both cropland and MPL acres, enter only the soil survey ID numbers used in item 14C.*--*

**Example:** A producer offers an 11 acre field adjacent to a perennial stream to be a filter strip. Only 10 acres are eligible for the filter strip. At least 50 percent of the field was offered as a filter strip and the 1 acre remaining does not exceed 25 percent of the filter strip acreage. The 1.0 acre may be enrolled as infeasible to farm acreage. See paragraph 182.

| 17C  | For cropland, enter the primary, secondary, and tertiary soil map unit symbols for the entire eligible acreage offered as infeasible to farm acreage.  

*--Note: For offers with cropland and MPL acres, enter only the map unit symbols used in item 14C for cropland acres.  

Infeasible-to-farm criteria does not apply to practices on MPL. Do not include MPL acres or MPL rates when calculating infeasible-to-farm acres where both cropland and MPL acres are on the offer. *--*

In the case of:

- FWP where there is no soil survey data or soil data is delineated as “W” water, the soil map unit symbol should be AVGRT (the county average CRP rental rate)

- CP39, if the offered acreage is on MPL and cropland, use the weighted average of MPL and cropland.

<table>
<thead>
<tr>
<th>Item</th>
<th>Instructions</th>
</tr>
</thead>
</table>
| 19   | Enter the established maintenance rate, if applicable.  

**Note:** See subparagraph 196 C for establishing and limits on maintenance rates.

When land offered is physically located in more than 1 State and/or county and each State and/or county has a different maintenance rate for the practice offered, the County Office shall calculate and enter a weighted average maintenance rate from the State/county where the predominance of land offered is physically located.

When multiple practices with different maintenance rates are offered, the County Office shall calculate and enter a weighted average maintenance rate.

**Example:** STC established maintenance rates of $2 for CP22 and $4 for CP21. A producer’s offer includes 20 acres of CP22, and 5 acres of CP21.

The County Office calculates the weighted average maintenance rate by:

- multiplying the number of acres offered times the maintenance rate for each practice ($40 for CP22, and $20 for CP21)
- dividing the total dollar amount by the total acres offered rounded to 2 decimal places ($60 divided by 25 = $2.40).

The County Office would ENTER “$2.40” in item 19.
### Completing CRP-2C (Continued)

26. PRODUCER’S CERTIFICATION:

By signing below I certify to all of the following: (1) I have been informed of the estimated cost of establishing the cover offered; (2) I have been informed that if I decline cost share assistance I will be ineligible for cost share assistance; (3) I have been informed that I may be required to pay for a measurement service on the acreage offered before such acreage may be enrolled in the CRP; (4) To the best of my knowledge and belief the acreage of crops and land listed herein, if applicable, are true and correct; and (5) The signing of this form gives USDA representatives authorization to enter and inspect crops and land uses and for other purposes on the above identified land.

I understand that an inaccurate certification could result in a payment reduction or loss of program benefits.

26A. Signature (By)

/S/ John H. Producer

26B. Title/Relationship of the Individual if Signing in a Representative Capacity

26C. DATE (MM/DD/YYYY)

08-28-2010

NOTE: The following statement is made in accordance with the Privacy Act of 1974 (5 USC 552a - as amended). The authority for requesting the information identified on this form is 7 CFR Part 1410, the Commodity Credit Corporation Charter Act (15 USC 714 et seq.), and the Food, Conservation, and Energy Act of 2008 (Pub. L. 110-246). The information will be used by CCC to consider and process the offer to enter into a Conservation Reserve Program contract, to assist in determining eligibility, and to determine the correct parties to the contract. The information collected on this form may be disclosed to other Federal, State, Local government agencies, Tribal agencies, and nongovernmental entities that have been authorized access to the information by statute or regulation and/or as described in applicable Routine Uses identified in the System of Records Notice for USDA/FSA-2, Farm Records File (Automated). Providing the requested information is voluntary. However, failure to furnish the requested information will result in a determination of ineligibility to enter into a Conservation Reserve Program contract.

This information collection is exempted from the Paperwork Reduction Act, as it is required for administration of the Food, Conservation, and Energy Act of 2008 (see Pub. L. 110-246, Title II, Subtitle J - Miscellaneous Conservation Provisions).

The provisions of appropriate criminal and civil fraud, privacy, and other statutes may be applicable to the information provided. RETURN THIS COMPLETED FORM TO YOUR COUNTY FSA OFFICE.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all of its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, political beliefs, genetic information, reprisal, or because all or part of an individual’s income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA’s TARGET Center at (800) 877-8339 (TDD) or (866) 632-9992 (English) or (866) 877-8339 (TDD) or (866) 877-8339 (Spanish Federal-relay). USDA is an equal opportunity provider and employer.
A Overview

The duration of CRP-1 may vary for each CRP-1. The CRP-1 period shall be not less than 10 nor more than 15 FY’s. See subparagraph 66 C for continuous signup practices and associated CRP-1 length.

Important: CRP payments shall not exceed 15 years.

B Effective Date of CRP-1 for Land Not Currently Enrolled in CRP

For land that is not enrolled in CRP at the time the producer submits CRP-1 and CRP-2C, the effective date of CRP-1’s under continuous signup provisions shall be the first day of the *--month following the month COC or CED approves CRP-1.--*

Exception: The producer may defer the effective date of CRP-1 up to 6 months. However, the effective date shall always be the first day of the applicable month. See subparagraphs E, F, and G for examples.

CRP-1’s not approved within 6 months of the date the producer signs CRP-2C shall be rejected.

Because the producer may defer CRP-1 effective date up to 6 months, all crops must be removed from the accepted acreage before the effective date of CRP-1.

Notes: Unless CRP-1 is effective on October 1, of any year, the first year’s annual payment shall be prorated and paid through special processing. See paragraph 198.

Grazing is prohibited beginning the later of the following:

- the effective date of CRP-1
- *--10 calendar days after COC or CED approves CRP-1.--*
213 CRP-1 Period for Continuous Signup (Continued)

C Effective Date of CRP-1 for Land Currently Enrolled in CRP

Land currently enrolled in CRP may be offered for re-enrollment through continuous signup if all of the following are met:

- the land enrolled in CRP is in the last year of CRP-1

*--Note: The land may be offered for re-enrollment no earlier than 6 months before CRP-1 is scheduled to expire.--*

Important: If the land enrolled in CRP is not in the last year of CRP-1, the land is not eligible to be offered for re-enrollment.

- the acreage offered meets all of the applicable eligibility requirements according to paragraph 181

- CRP-1 effective date is October 1 of the year the existing CRP-1 expires.

Important: Land enrolled in CRP in the last year of CRP-1 is not eligible to be re-enrolled with an effective date other than October 1 of the year the existing CRP-1 expires. The CRP-1 effective dates for re-enrolled land is not authorized.--*

D Expiration Date of CRP-1

Expiration date of CRP-1’s under continuous signup provisions shall be September 30 of the applicable year, as determined by the duration of CRP-1, regardless of the effective date of CRP-1.
E Example 1 of 10-Year CRP-1

Producer offers land not currently enrolled in CRP for enrollment through continuous signup. CRP-1 was approved by COC or CED on July 22, 2010. The effective date shall be *--August 1, 2010, unless the producer chooses to defer the effective date and the expiration date shall be September 30, 2020. The producer may elect to defer the effective date up to 6 months.

Using this same example, a 6-month deferment would result in an effective date of February 1, 2011, and the expiration date for CRP-1 shall be September 30, 2021.---*

Assuming an effective date of August 1, 2010, the producer would receive CRP payments for 10 years and 2 months if all eligibility requirements were met. Assuming an effective date of February 1, 2011, the producer would receive CRP payments for 10 years and 8 months.

Note: Each payment, including the first year prorated payment, will be paid after October 1 of each applicable year. See paragraph 198.
F  Example 2 of 10-Year CRP-1

On July 2, 2010, producer offers land currently enrolled in CRP for enrollment through continuous signup. The existing CRP-1 expires September 30, 2010, and all other eligibility requirements are met. CRP-1 for acreage offered was approved by COC or CED on July 12, 2010. The effective date shall be October 1, 2010. The effective date shall not be deferred.

The expiration date shall be September 30, 2020.

G  Example of 15-Year CRP-1

Producer offers land not currently enrolled in CRP for enrollment through continuous signup. CRP-1 was approved by COC or CED on February 22, 2010. The effective date shall be March 1, 2010, unless the producer chooses to defer the effective date. The producer may elect to defer the effective date up to 6 months.

In this example, a 6-month deferment would result in an effective date of September 1, 2010.

The producer shall not receive CRP payments for more than 15 years; therefore, the expiration date for CRP-1 shall be September 30, 2024. Assuming an effective date of March 1, 2010, the producer would receive CRP payments for 14 years and 7 months. Assuming an effective date of September 1, 2010, the producer would receive CRP payments for 14 years and 1 month.

Note: See paragraph 198 for first year prorated annual rental payments.
A Completing CRP-1

All item numbers, except item number 3, must be completed before producer signs CRP-1.

All changes to data entered on CRP-1 after producer signs CRP-1 must be initialed and dated by both the employee making the change and the producer.

Notes: Complete CRP-1 for continuous signup according to Exhibit 21.

See paragraph 215 for notifying producers.

Unlike a general CRP signup where CRP-1 effective date is known at the time the producer completes CRP-1 and CRP-2, the continuous signup CRP-1 effective date cannot be accurately determined at the time the producer completes CRP-2C.

Exception: The continuous signup CRP-1 effective date is known at the time the producer completes CRP-2C when the land offered is currently enrolled in CRP. See paragraph 215.

Because continuous signup CRP-1 effective date may not be known at the time the producer completes CRP-1 and CRP-2C and there is no penalty for withdrawing or modifying a continuous signup offer.
Completing CRP-1 for Continuous Signup (Continued)

A Completing CRP-1 (Continued)

The following provides an example of land offered for enrollment under continuous signup with the producer not signing CRP-1 until all documents and information required are obtained. **The following is an example for demonstration purposes only.**

<th>Action</th>
</tr>
</thead>
</table>
| April 3, 2010    | For FWP and CREP, producer completes CRP-2C, item 9 and CRP-1, item 11A with an acceptable per acre rental rate offered amount and signs CRP-1 and CRP-2C. County Office provides producer CRP-1 Appendix and informs producer:  
  - the offer is acceptable  
  - starting the practice before CRP-1 approval is at the producers own risk  
  - of all the requirements needed for CRP-1 approval, such as:  
    - working with NRCS or TSP to obtain a conservation plan  
    - completing a measurement service, see paragraph 401  
    - signed landlord/tenant certification statement.  

  **Note:** See subparagraph 555 E for applicable CRP-1 Appendix. |
| May 17, 2010     | County Office:  
  - receives all required information and forms to approve CRP-1  
  - completes second party review of all eligibility requirements and maximum payment rate calculations. |
| May 25, 2010     | COC or CED approves CRP-1 with an effective date of June 1, 2010.                                                                 |
| May 26, 2010     | County Office notifies producer of contract approval and effective date.                                                               |
Notifying Producers With Continuous Signup Offers

A Unacceptable Offers

Before submitting CRP-2C to NRCS or TSP, COC or CED shall determine whether all eligibility requirements in paragraph 181 are met.

If all applicable eligibility requirements are not met, COC or CED shall:

- not submit CRP-2C to TSP
- use CRP-26 to inform producer the offer was not acceptable.

B Acceptable Offers

If CRP-2C is returned from NRCS or TSP and all eligibility requirements are met, COC or CED shall notify producer that CRP-1 and CRP-2C must be completed and signed.

Important: CRP-1 and CRP-2C not signed within 30 calendar days of the date the producer is notified CRP-2C is ready for signature shall be rejected.

If producer completes CRP-1 and CRP-2C with an acceptable per acre rental rate offered amount and signs CRP-1 and CRP-2, County Office shall provide producer CRP-1 Appendix and inform producer:

- the offer is acceptable using CRP-23
- starting the practice before CRP-1 approval is at the producer’s own risk
- of all the requirements needed for CRP-1 approval, such as:
  - working with NRCS or TSP to obtain a conservation plan
  - completing a * * * measurement service
  - signed landlord/tenant certification statement.

Note: See subparagraph 555 E for applicable CRP-1 Appendix.
Notifying Producers With Continuous Signup Offers (Continued)

B Acceptable Offers (Continued)

All changes to data entered on CRP-1 and CRP-2C after producer signs CRP-1 and CRP-2C must be initialed and dated by both the employee making the change and the producer.

CRP-1’s not approved within 6 months of the date the producer signs CRP-2C shall be rejected.

Note: See paragraph 213

When CRP-1 is approved, COC shall use CRP-24 to notify producer of approval and CRP-1 effective date. See Exhibit 5

Note: See paragraph 401 for CRP-1 approval requirements.

216-236 (Reserved)
A Background

The Food, Conservation and Energy Act of 2008 authorized FWP through September 30, 2012, for the enrollment of the following:

- certain cropped wetlands and associated buffers
- land devoted to constructed wetlands and associated buffers
- land devoted to certain commercial pond-raised aquaculture
- land subject to the natural overflow of a prairie wetland (flooded prairie wetland) and associated buffers.

B Authorized Practices

Practices authorized for continuous signup enrollment in CRP under FWP are:

- CP27, FWP Cropped Wetland
- CP28, FWP Buffer
- CP39, FWP Constructed Wetland
- CP40, FWP Aquaculture Wetland Restoration
- CP41, FWP Flooded Prairie Wetland.

See Exhibit 11 for practice writeups for CP27, CP28, CP39, CP40, and CP41.
C  Practice Eligibility Criteria Side by Side

The following provides a side-by-side of the eligibility criteria for each of the practices under FWP.

<table>

</tbody>
</table>

1/ Buffer acreage plus wetland acreage may exceed 40 acres per tract; however, wetland component may not exceed limits of “Wetland Size” column.
Acreage Limitations

The statute limits participation in CRP under FWP to:

- 1,000,000 acres in all States
- not more than 100,000 acres in any 1 State.

States may request on a case by case basis to increase to 200,000 acres.

Offers will be accepted on a continuous signup basis until the earlier of the following:

- FWP national acreage limitation of 1,000,000 is reached
- State acreage allocation is reached
- CRP statutory authority is reached.

</tbody>
</table>
C 25 Percent Cropland Limitation

The 25 percent cropland limitation applies to FWP. When all acreage enrolled in CRP exceeds the 25 percent limitation and a waiver has not been approved, County Offices shall:

- announce the FWP signup
- notify all producers that only offers for continuous signup marginal pastureland practices, CP22, CP29, and CP30, and land physically located in a county that has not reached or exceeded the 25 percent limitation will be processed
- ensure that offers for acreage physically located in the county are not processed, except continuous signup practices.

Note: COC shall immediately reject all offers for acreage physically located in the county, except continuous signup marginal pastureland practices CP22, CP29, and CP30, and inform the producer using CRP-26.
A Ownership Eligibility

An owner is eligible to offer land for enrollment in FWP if the owner meets 1 of the following requirements:

- owned the land for 12 months before CRP-2C is submitted
- acquired the land by will or succession as a result of death
- acquired the land under circumstances other than for placement in CRP under FWP, as determined by the FSA National Office.

Note: Ownership eligibility requirements are satisfied if there is any combination of continuously leasing and owning the same person or entity during the 12-month period before CRP-2C is filed.

B Operator Eligibility

An operator is eligible to offer land for enrollment in FWP when the operator meets both of the following requirements:

- operated the land for 12 months before CRP-2C is filed
- provides satisfactory evidence, as determined by COC, that control of the land will continue uninterrupted for the CRP-1 period.

Note: Satisfactory evidence may include any of the following:

- statement signed by the owner
- written lease for the appropriate time period
- owner’s signature on CRP-1.

Operator eligibility requirements shall be satisfied if there is any combination of leasing and owning by the same person or entity during the 12-month period before CRP-2C is filed.
A Cropland Eligibility Criteria

Eligible cropland for wetlands (CP27) and associated buffer (CP28) includes cropland that is both of the following:

- planted, COC-approved prevented planted, or considered planted to an agricultural commodity during any 3 of the previous 10 crop years

Notes: Acreage for which a producer received a crop insurance indemnity payment for prevented planting shall be considered planted for that year for CRP cropping history purposes.

Field margins that are incidental to the planting of crops, such as turnrows, field borders, and center pivot corners, are eligible to be offered. Field margins do not include other areas within a field.

The following are conserving use and are considered planted for cropping history purposes for CRP, including CREP:

- during 2002 through 2007, any planted alfalfa, planted other multi-year grasses and legumes, and any summerfallow

- any rotation of planted alfalfa, planted other multi-year grasses and legumes, and any summerfallow in rotation

Note: Rotation must not exceed 12 consecutive years.

- any land previously enrolled in CRP where grass cover continues to be maintained as though enrolled in CRP.

- physically and legally capable of being planted in a normal manner to an agricultural commodity in a normal manner during a normal cropping season.

---Note: COC’s or CED’s determination must be based on whether the cropland could be planted to an agricultural commodity in a normal manner during a normal cropping season.

Acreage permanently under water is ineligible to be offered for enrollment in FWP unless land is eligible for enrollment under CP40 or CP41.
Acreage Limitations and Practice Eligibility for CP27 and CP28

A Eligibility Criteria for CP27

Cropland designated as cropped wetlands, or prior converted wetlands, as determined by NRCS or TSP, not to exceed 40 acres per tract, may be enrolled in the CRP under FWP as CP27.

**Note:** Cropped wetlands are farmed wetlands and wetlands farmed under natural conditions.

B CP27 Acreage Limitations

The maximum size of any 1 wetland (CP27) is 40 acres per tract. Wetlands greater than 40 acres in size are **not** eligible for enrollment in CRP under FWP, CP27.

**Examples:**

A producer has a 41.5 acre wetland. The producer wants to offer 40 acres of the wetland for enrollment in FWP. Because the total wetland is greater than 40 acres in size, it is **not** eligible for enrollment in FWP as a CP27.

A producer offers a 15-acre wetland, a 12-acre wetland, and a 13.0-acre wetland for enrollment in FWP. Because the total acres do not exceed 40 acres, all wetlands (40 acres) may be enrolled if all other eligibility requirements are met. Associated buffers (CP28) **must** be enrolled for the wetland acreage. The total of the wetland and buffer acreage may exceed 40 acres per tract.

C CP28 Acreage Limitations

The minimum size of any associated buffer (CP28) enrolled in CRP under FWP is 30 feet surrounding the wetland.

The maximum size of any associated buffer (CP28) enrolled in CRP under FWP is 4 times the size of the wetland. STC’s may determine a buffer ratio less than 4:1, consistent with program purposes and with State Technical Committee concurrence.

**Note:** The total acreage of each associated buffer must **not** exceed the size limitation.
C CP28 Acreage Limitations (Continued)

CP28 must be enrolled in conjunction with each of the following practices:

- CP27
- CP41.

*--Note: A CP28 is not required for practice CP39 or CP40.--*

Examples:

A producer offers a 2 acre FWP cropped wetland (CP27) for enrollment in FWP. NRCS or TSP determines that the associated buffer (CP28) necessary to protect the wetland is 8 acres. CP28 does not exceed 4 times the size of the wetland (8 acres); therefore, both CP27 and CP28 are eligible for enrollment in FWP, provided all other eligibility requirements are met.

A producer offers a 2 acre wetland (CP27) for enrollment in CRP under FWP. NRCS or TSP determines that the associated buffer (CP28) necessary to protect the wetland is 12 acres. Because the buffer exceeds 4 times the size of the wetland acreage, CP27 and CP28 are ineligible for CRP under FWP.

A producer offers a 10 acre wetland, a 12 acre wetland, a 15 acre wetland, and an 8 acre wetland. All are offered as CP40. Because there is no limit on the wetland size of CP40, all wetlands are eligible to be offered for enrollment in FWP. A buffer may be installed around the wetlands, but is not required.
D Tract Limitation

Enrollment in CRP under CP27 is limited to no more than 40 acres of wetland per tract. The combined total acreage of wetland (CP27), not to exceed 40 acres, and associated buffer (CP28) may exceed 40 acres per tract.

Example: Tract 2101 = 160 acres
Total CP27 = 20 acres
Total CP28 = 80 acres
Total of Enrolled Practices = 100 acres
242 FWP Eligible Land Criteria for CP39

A Land Eligibility Criteria

Land eligible to be enrolled as CP39 is land that receives flow from a row crop agriculture drainage system designed to provide nitrogen removal and other wetland functions.

*--Note: There is no cropping history requirement for cropland or marginal pastureland--*

enrolled as a constructed wetland (CP39).

243 Acreage Limitation and Practice Eligibility for CP39

A Eligibility Criteria for CP39

Land that meets eligibility criteria of subparagraph 242 A, not to exceed 40 acres per tract, may be enrolled in FWP as CP39.

B CP39 Acreage Limitations

The maximum size of any 1 constructed wetland CP39 is 40 acres. Constructed wetlands greater than 40 acres in size are not eligible for enrollment in CRP under FWP as CP39.

The total of all constructed wetlands per tract may not exceed 40 acres.

*--An associated buffer is required in conjunction with practice CP39. The associated buffer should be included as part of the CP39 enrolled acres. The maximum size of the associated buffer is 4 times the size of the wetland acreage. STC’s may determine a buffer ratio less than 4:1, consistent with program purposes and with State Technical Committee concurrence.--*
C Tract Limitations

Enrollment in CRP under CP39 is limited to no more than 40 acres of wetland per tract. The combined total acreage of wetland and associated buffer, may not exceed 40 acres per tract unless a waiver is approved according to subparagraph D.

Example: Tract 2101 = 160 acres
Total CP39 = 15 acres
Associated buffer = 60
Total of Enrolled Practices = 75 acres

Note: This land would not be eligible for enrollment as CP39 unless a waiver is approved by DAFP.

D Waiver

If wetland acreage offered for enrollment is less than 40 acres and the combined wetland and buffer exceed 40 acres, STC may submit a request to DAFP to waive the 40 acre tract limitation.--*
A Land Eligibility Criteria

Eligible land to be enrolled in FWP as CP40 is land that was devoted to commercial pond-raised aquaculture in any 1 year during 2002 through 2007.

B Commercial Pond-Raised Aquaculture

Commercial pond-raised aquaculture means any earthen facility from which $1000 or more of freshwater food fish were sold or normally would have been sold during a calendar year.

Foodfish are considered fish grown under controlled conditions (aquaculture) for human consumption. Fingerling ponds and brood ponds are considered foodfish and are eligible for enrollment under practice CP40 because these ponds are used in the overall commercial operation.

**Note:** Other aquaculture products that are not cultivated for human consumption (nonfoodfish), which includes ornamental fish, bait fish, sport fish, and plants are not eligible for enrollment under practice CP40.

Producers must provide verification of commercial pond raised aquaculture using any of the following:

- feed purchase records
- stocker purchase records
- harvest/sales records
- imagery
- slides.
A  CP40 Acreage Limitations

Land devoted to commercial pond-raised aquaculture to be enrolled in FWP as practice CP40 is **not** limited by size of the wetland or by tract.

**Example:** Tract = 60 acres
CP40 = 60 acres (pond area and levee)

![Diagram of pond layout]

**Note:** The levee area is included as part of the CP40 and will be planted to appropriate vegetation for the site. A buffer (CP28) is not required.
246 FWP Eligible Land Criteria for CP41

A  Crop Land Eligibility Criteria

Eligible cropland for enrollment as practice CP41 is cropland located in the Prairie Pothole CPA, according to Exhibit 18, that was:

- subject to the natural overflow of a prairie wetland
- COC-approved prevented planted
- planted or considered planted to an agricultural commodity during at least 3 of the 10 crop years after January 1, 1990, and before December 31, 2002.

Notes: Acreage for which a producer received a crop insurance indemnity payment for prevented planting shall be considered planted for that year for CRP cropping history purposes.

Field margins that are incidental to the planting of crops, such as turnrows, field borders, and center pivot corners, are eligible to be offered. Field margins do not include other areas within a field.

Acreage that received planted and considered planted credit for crop acreage base protection is considered planted for purposes of CRP cropland eligibility.

Examples: A producer planted corn in 1991, soybeans in 1997, and corn in 2002. All other years the land was intermittently flooded. The land does not meet the cropping requirements because the planting was not within a 10-year period (1991 through 2002).

A producer planted soybeans in 1993, corn in 1997, and wheat in 2002. This land meets cropping history because the planting is within the 10-year period (1993 through 2002).

B  10 Year Cropping History Time Periods for CP41

The following are the 10 year cropping history time periods for CP41.

|------|------|------|------|------|------|------|------|------|------|------|------|------|
Acreage Limitation and Practice Eligibility for CP41

A Eligibility Criteria for CP41

Cropland that meets the eligibility criteria of subparagraph 246 A, not to exceed 20 contiguous acres per flooded prairie wetland, may be enrolled in the CRP under FWP as CP41.

B CP41 Acreage Limitation

The maximum size of any 1 flooded prairie wetland (CP41) is 20 contiguous acres. Flooded prairie wetlands greater than 20 acres in size are not eligible for enrollment in CRP under FWP as CP41.

The total of all flooded prairie wetlands on an offer may exceed 20 acres. The total of all flooded prairie wetlands per tract may not exceed 40 acres.

Examples: A producer has a 22.5 acre flooded prairie wetland. The producer wants to offer 20 acres of the flooded prairie for enrollment in FWP. Because the total wetland is greater than 20 acres in size, it is not eligible for enrollment in FWP.

A producer offers a 12.5 acre flooded prairie wetland, a 8 acre flooded prairie wetland, and a 18.5 acre flooded prairie wetland for enrollment in FWP. Because no wetland is greater than 20 acres, all flooded prairie wetlands (39 acres) may be enrolled if all other eligibility requirements are met. Associated buffers must be enrolled for the flooded prairie wetland acreage.

Neither CP41 nor CP28 may be enrolled as a separate practice. See subparagraph 241 C for CP28 acreage limitation.
C Tract Limitation for CP41

Enrollment in CRP under CP41 is limited to no more than 40 acres per tract. The maximum size of any one CP41 is 20 acres. The combined total acreage of CP41’s is limited to 40 acres per tract. The total of CP41 and associated buffer (CP28) may exceed 40 acres per tract.

Example: Tract 2101 = 240 Acres
Total CP41 = 39 Acres
Total CP28 = 156 Acres
Total of Enrolled Practices = 195 Acres
A CRP-1’s and CRP-2C’s

County Offices shall follow Part 7, for processing CRP-1’s and CRP-2C’s for enrollment in CRP under FWP.

*--For FWP, see subparagraph 212 B for completing CRP-2C.--*

B Contract Duration and Effective Date

The CRP-1 period for CRP-1’s under FWP is 10 to 15 years.

*--The effective date of CRP-1 is the first of the month following the month COC or CED--*

approves CRP-1.

C Program Year

The program year is FY in which the first payment is earned.

D Continuous Signup Number

For acreage enrolled in CRP under FWP, County Offices shall use the current continuous signup number.

Note: Continuous signup numbers change the beginning of every FY.
A  Annual Rental Payment

Producers receive annual rental payments on the land that is enrolled under FWP. The annual rental payment is the sum of the following:

- calculated SRR
- 20 percent of the calculated SRR
- applicable maintenance incentive rate, according to subparagraph 196 C.

Note: The revised maintenance incentive applies to all new offers except for CREP. CREP related maintenance incentives are governed by approved CREP agreements.

B  Cost-Share Payments

CCC will pay up to 50 percent of the eligible cost of establishing a permanent cover. See Part 15.

C  Incentive Payments

The following incentives are authorized for CP27, CP28, CP39, CP40, and CP41:

- PIP
- SIP

*—Note: Expiring CRP that is being re-offered as FWP is not eligible for SIP. Cropland previously enrolled in CRP that is re-enrolled for FWP, is not eligible for SIP if the cover has been maintained.--*

- 20 percent of the weighted average SRR.
261 General EFCRP Information

A Background

EFCRP was authorized to enroll land in CRP that is PNIF and that experienced a loss of 35 percent or more of merchantable timber in the States suffering forestry damage directly related to the 2005 hurricanes.

The 2005 hurricanes are Hurricanes Dennis, Katrina, Ophelia, Rita, and Wilma.

Offers for EFCRP will be accepted on a rolling signup basis which will be periodically reviewed for acceptability.

During signup, offers will be evaluated on the basis of:

- soil erosion prevention
- water quality improvement
- wildlife habitat restoration
- mitigation of economic loss.

Offers will be ranked at the National Office using a national ranking process. Offers selected will be those that provide the greatest benefits as related to these 4 factors.

B Goals

EFCRP is a conservation program to restore and enhance the forest resources that were severely impacted by the 2005 hurricanes.

C Consistency with CRP Procedure

Unless otherwise noted, all other provisions of CRP apply to EFCRP.

References to CRP-1 shall mean CRP-1L for EFCRP purposes.
A  States and Counties Authorized for EFCRP

EFCRP is eligible in primary Presidential- or Secretarial-designated counties associated with the 2005 hurricanes which includes Alabama, Florida, Louisiana, Mississippi, North Carolina, and Texas.

B  Eligibility for Owners and Operators

Persons determined eligible for CRP according to Part 6 may request to enroll certain acreage in EFCRP according to this section.

C  Eligibility Requirement

Eligible land is land on a tract or a portion of a tract that:

- is located in a primary Presidential- or Secretarial-designated county

  Note: For tracts that overlap eligible and ineligible counties, at least 51 percent of the eligible land in a tract must be located in an eligible county.

- is PNIF

- before the hurricane, was merchantable timber with an average tree diameter of at least 6 inches at 4 ½ feet above ground level

- suffered a minimum of 35 percent loss of merchantable timber because of 1 or more 2005 hurricanes

  Note: See subparagraph E for determining loss.

- was owned by a State school trust with PNIF.

Notes: Corporations whose stocks are publicly traded or owners or lessees principally engaged in the primary processing of raw wood products are excluded.

No minimum acreage size is authorized for EFCRP.
A Contract Duration and Effective Date

The CRP-1L period for EFCRP is 10 years.

*--The effective date of CRP-1L is the first day of the month following the month COC or CED approves CRP-1L. EFCRP contracts will expire at the end of the month throughout the year, depending upon the month of the effective date.

Note: The producer may not defer the effective date of CRP-1L.

B Program Year

The program year is FY in which the first payment is earned.

C Continuous Signup Number

EFCRP shall use signup number 34.
A EFCRP Payment Options

Participants may elect to receive either an annual rental payment or a lump sum payment.

B Annual Rental Payment

Participants may receive annual rental payments on the land enrolled in EFCRP. The EFCRP rental payment rate is the average rental rate for CRP contracts in the county. The annual rental payment is the EFCRP rental rate multiplied times the number of acres of the EFCRP contract.

Note: Where no CRP contracts were enrolled in a county, the EFCRP rental rate is the CRP rental rate applicable to a nearby similarly-situated county.

Example: A producer enrolls 10 acres in EFCRP in Lafayette Parish, Louisiana. Lafayette Parish average rental rate for current CRP contracts is $30 per acre.

10 acres X $30 per acre = $3,000. The annual rental payment is $3,000.

The annual rental rate incorporates any annual maintenance payment. There shall be no additional maintenance rates added to the annual rental rate.

Note: See subparagraph 462 B for issuing annual payments for EFCRP contracts for CRP-1L’s.

Exception: Annual payments are scheduled to be issued starting 1 year after the anniversary of the effective date of the contract.

C Lump-Sum Payment

Participants may select to receive a lump-sum payment for the EFCRP contract. The lump-sum payment is a one-time payment for the 10-year EFCRP contract period. The *--payment will be issued within 30 calendar days from the date COC or CED approves--*

CRP-1L.

A lump sum payment means the present value of the 10 annual payments based on a 5 percent discount rate.

Note: The applicable discount rate shall be the discount rate at the time the contract is signed. FSA will provide a new discount rate on or about October 1 each year. The discount rate should remain in effect throughout the FY.
C Lump Sum Payment (Continued)

Example 1: A producer enrolls 10 acres into EFCRP in Lafayette Parish, Louisiana (average SRR on existing CRP contracts is $30) and chooses the lump sum payment. The producer will receive the present value of 10 annual payments of $300. The producer would receive a one-time lump sum payment of $2,317 for the 10 acres.

Under a lump sum payment, a producer may receive a one-time payment that exceeds the CRP annual payment limitation of $50,000. However, no producer shall receive an amount larger than PV of $50,000 per year for 10 years.

Example 2: A producer, who has no other CRP contracts, enrolls 1,000 acres in Perry County (average CRP rental rate = $30). The producer elects to receive a lump sum payment ($231.65 per acre). The producer will receive a lump sum payment of $231,650. The annual rental payment for payment limitation purposes is $30 per acre X 1,000 acres = $30,000 per year.

D Payment Limitation for Lump Sum Payment

For payment limitation purposes, lump sum recipients will be treated as the equivalent of 10 annual payments.

Example: A producer receives a lump sum payment of $233,650. The payment is based on the present value of 10 annual payments of $30,000.

E C/S Payments

CCC will pay up to 50 percent of the eligible cost of establishing a permanent cover.
F Other Federal C/S

EFCRP participants receiving other Federal C/S payments are **not** eligible to receive or retain EFCRP C/S on the same acreage.

**Exception:** If the payments received are not considered C/S, or the other program's activity is fully completed before the effective date of the EFCRP contract, then the EFCRP participant may receive EFCRP C/S. Fully completed means that all activity is finished and a payment made with no further obligations.

**Example:** A producer offers to enroll 1,000 acres. The contract is approved and she receives $24,000 in C/S payments. The producer applies for C/S assistance from another Federal program. If the producer receives other Federal C/S assistance, then the producer is no longer eligible to retain or receive CRP C/S payments.

G Incentive Payments

SIP, PIP, and SRR incentives are **not** authorized for EFCRP.

**Important:** Incentive payments are **not** authorized for EFCRP.

**Note:** EFCRP rental rates provide funding to carry out maintenance activities.

H Payment Limitation

Payment limitation provisions apply to participants enrolled in EFCRP. In the case of more than 1 producer, payments limitations for lump sum payments will be based on what the equivalent annual payment would be for the contract time of that producer’s share.
A Mid-Contract Management

EFCRP contracts are required to have appropriate mid-contract management measures implemented during the contract as designated in the conservation plan as determined by STC in consultation with the State Technical Committee.

See paragraph 428 for mid-contract management activities.

B Thinning Activities

Thinning activities may be conducted during the contract provided that the activities are incorporated in the approved conservation plan. Thinning activities must be carried out in a manner consistent with the terms and conditions of the conservation plan.

C/S for tree trimming is authorized.

266-285 (Reserved)
## Part 10  General Signup and Offer Process

### 286 Overview

#### A General Information About Signup and Offer Process

Signup periods will be announced by DAFP. The National Office shall provide State and County Offices:

- program information sheets for producers
- updated program provisions and procedures
- other information as requested.

During signup, producers will submit offers for the amounts they are willing to accept to enroll acreage in the program. County Offices will calculate the maximum acceptable rental rate for the acreage being submitted. This amount is referred to as the maximum payment rate and is described in detail in paragraph 101.

Offers will be ranked at the National Office using a national ranking process. Offers selected will be those that provide the greatest environmental benefits considering the cost of enrolling the acreage in the program.

#### B CRP Activities Flow Chart

The following is a flow chart that describes activities related to CRP signup.

<table>
<thead>
<tr>
<th>Step</th>
<th>Activities Occurring During and After Signup and Before Offers Are Ranked</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Provide EBI, General Signup Fact Sheets, and CRP-1 Appendix.</td>
</tr>
<tr>
<td>2</td>
<td>Identify acreage to be offered on map.</td>
</tr>
<tr>
<td>3</td>
<td>Determine producer eligibility.</td>
</tr>
<tr>
<td>4</td>
<td>Determine land eligibility.</td>
</tr>
<tr>
<td>5</td>
<td>Determine 3 predominant soil types on the acreage offered using TERRA.</td>
</tr>
<tr>
<td>6</td>
<td>Enter offer data in COLS.</td>
</tr>
<tr>
<td>7</td>
<td>Producer signs and dates COLS-generated CRP-1 and CRP-2.</td>
</tr>
<tr>
<td>8</td>
<td>County Office submits offer through COLS.</td>
</tr>
</tbody>
</table>

**County Offices Action**

**State Office Action**

10. Review the “State Office CRP Oversight Map” information available on CEPD’s State Office Information Center Intranet.

11. Contact County Offices, if necessary, to facilitate changes in offer records when errors are detected.
B CRP Activities Flow Chart (Continued)

<table>
<thead>
<tr>
<th>Step</th>
<th>Activities Occurring During and After Signup and Before Offers Are Ranked</th>
<th>Activities Occurring After Records Are Reviewed</th>
</tr>
</thead>
<tbody>
<tr>
<td>12</td>
<td>Return questionable records to County Office for review and possible correction.</td>
<td></td>
</tr>
<tr>
<td>13</td>
<td>Access and review validation reports, if applicable, from CEPD’s State Office Information Center Intranet and correct offers, if necessary.</td>
<td></td>
</tr>
<tr>

<tr>
<td>16</td>
<td>County Offices shall conduct final eligibility review.</td>
</tr>
<tr>
<td>17</td>
<td>Producers will be notified of acceptable or rejected offers by County Office.</td>
</tr>
<tr>
<td>18</td>
<td>County Office shall complete a * * * measurement service for acceptable offers. <em>--See paragraph 401 for exceptions and using TERRA.--</em></td>
</tr>
<tr>
<td>19</td>
<td>Conservation plan of operations will be developed by NRCS or TSP, if applicable.</td>
</tr>
<tr>
<td>20</td>
<td>Conservation plan of operations will be approved by the Conservation District.</td>
</tr>
<tr>
<td>21</td>
<td>Final approval of conservation plan of operation by COC or CED.</td>
</tr>
<tr>
<td>22</td>
<td>CRP-1 is approved by COC or CED.</td>
</tr>
</tbody>
</table>

287-292 (Reserved)
A About the National Ranking Plan

The national ranking process was developed by FSA, in consultation with NRCS, ERS, EPA, FS, FWS, and other agencies. The process is designed to prioritize CRP offers based on environmental criteria and cost. The process uses an EBI that includes 6 national ranking factors: 5 factors that quantify the relative environmental benefits of each offer, and 1 cost factor that quantifies cost on a per acre basis.

The National Office shall determine the rank of each offer within States where the national ranking process will be used by adding the sum of the scores received for all environmental factors and applying a cost factor. Offers will be ranked from highest to lowest total score.

Note: The EBI scores assigned to each factor are applied generally to all eligible offers; therefore, the EBI point system is not appealable. The information used to determine the individual EBI score for a specific offer may be appealed.

The National Office shall use scores for the national environmental ranking factors to determine the actual ranking of the offers received.

The 5 national environmental ranking factors will be collected for all offers.
B National Ranking Factors

The following are the 6 national ranking factors.

<table>
<thead>
<tr>
<th>Factor</th>
<th>Description</th>
<th>Point Ranges</th>
</tr>
</thead>
<tbody>
<tr>
<td>N1</td>
<td>Wildlife Habitat Cover Benefits</td>
<td><em>--10 through 100--</em></td>
</tr>
<tr>
<td>N2</td>
<td>Water Quality Benefits From Reduced Erosion, Runoff, and Leaching</td>
<td>0 through 100</td>
</tr>
<tr>
<td>N3</td>
<td>On-Farm Benefits of Reduced Erosion</td>
<td>0 through 100</td>
</tr>
<tr>
<td>N4</td>
<td>Enduring Benefits</td>
<td>0 through 50</td>
</tr>
<tr>
<td>N5</td>
<td>Air Quality Benefits</td>
<td><em>--3 through 45--</em></td>
</tr>
<tr>
<td>N6</td>
<td>Cost/Acre</td>
<td>to be determined</td>
</tr>
</tbody>
</table>

Scoring criteria for each national ranking factor are listed in Exhibit 26.

FSA will determine environmental scores for factors N1 through N5 for each offer during and shortly after signup.

**Note:** Offers under continuous signup are not evaluated. See paragraph 181.

The National Office shall determine the cost factor using the CRP per acre offer. If 2 offers have the same environmental ranking score, the 1 with the lower per acre rental rate shall receive a higher ranking.

For general signup, when the applicable cropland limit for the county is reached, the residency of the owner or operator that submitted the offer will be used to determine the acceptability of the offer when more than 1 offer has an equivalent EBI score, plus cost.

**Example:** The EBI (environmental benefits plus cost) cutoff level in Bucks County, Pennsylvania is 250 points. Bucks County is 20 acres from the 25 percent cropland limit.

Offer A (250 EBI points and 20 acres in size) is from an out of State landowner with an operator from Montgomery County, Pennsylvania.

Offer B (250 EBI point and 20 acres in size) is from a local Bucks County farmer.

Offer B will be selected for enrollment in the program.
C Processing Offers

Only general signup offers will be accepted. Continuous offers will be accepted under the continuous signup process. See Part 7.

Under the national ranking process, general signup offers shall compete based on the scores for each national factor, including cost.

Note: Offers under continuous signup are not evaluated. See paragraph 181.

D Selecting Offers

After all offers have been ranked, the National Office shall provide by notice the ranking list to each applicable State and County Office indicating the offers that have been determined acceptable. County Offices shall notify each producer according to paragraph 341 after conducting the final eligibility review.
A State Office Action

State Offices shall perform the following activities before signup:

- provide information to STC regarding national selection criteria
- ensure that all County Offices have:
  - necessary forms and information needed to conduct a signup
  - evaluated the total cropland figures for the county and have followed procedure in Part 4 accordingly
- ensure that:
  - County Office personnel are trained on program policy and procedure, when determined needed by STC
  - County Offices monitor their total county cropland status and follow Part 4.
A County Office Action

County Offices shall:

• ensure that:
  • all necessary forms for conducting a signup are in the County Office
  • soil/payment rate tables are made available to the public

• conduct public information meetings if the National Office provides sufficient information to hold a meeting before signup

• review total cropland provision in Part 4 to determine whether a signup will be held for all practices or only for MPL practices eligible under continuous signup.

Note: See Part 4.
Announcing County CRP

A County Offices Announcing CRP

County Offices shall use news media to inform all owners and operators, on a county-wide basis, of the following:

- CRP eligibility requirements
- locations and dates of informational meetings
- dates for submitting offers

**Note:** See Exhibit 20

- CRP provisions, including general terms and conditions
- information needed to submit offers, such as eligible cropping history, fields to be identified, and number of acres to be offered.

Mail CRP announcement to all owners and operators in the county.

**Note:** County Offices shall include CRP continuous signup information in the county newsletter. Special mailings are optional but not required.

B Statement of Participation

All eligible owners and operators, regardless of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status, shall have an opportunity to submit requests to place land in CRP.
332 Submitting Offers

A County Office Responsibilities

County Offices may adjust the order of events in the table to provide for a workable signup period. **Before the producer submits** an offer to participate in CRP, County Offices shall do the following.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Provide general information about program provisions, such as a Fact Sheet.</td>
</tr>
<tr>
<td>2</td>
<td>Explain program details, such as:</td>
</tr>
<tr>
<td></td>
<td>• the EBI process</td>
</tr>
<tr>
<td></td>
<td>• required cropping history</td>
</tr>
<tr>
<td></td>
<td>• maximum payment rate calculations</td>
</tr>
<tr>
<td></td>
<td>• national ranking and selection process</td>
</tr>
<tr>
<td></td>
<td>• COC determinations</td>
</tr>
<tr>
<td></td>
<td>• available practices and C/S rates.</td>
</tr>
<tr>
<td>3</td>
<td>Verify producer and cropping history eligibility for the offered acres according to Part 6.</td>
</tr>
<tr>
<td></td>
<td><strong>Notes:</strong> Determine whether these requirements are met <strong>before</strong> submission of data.</td>
</tr>
<tr>
<td></td>
<td>FSA shall determine land eligibility.</td>
</tr>
<tr>
<td>4</td>
<td>Delineate acres to be offered.</td>
</tr>
<tr>
<td>5</td>
<td><strong>Measurement services to determine acres to be offered.</strong></td>
</tr>
<tr>
<td></td>
<td>Paid-for measurement service shall be completed for acreage offered before CRP-1 is approved. See paragraph 401.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> See 2-CP, paragraph 460 for additional guidance.--*</td>
</tr>
<tr>
<td>6</td>
<td>Process offers through COLS. See paragraph 333 for completing CRP-2, including calculating maximum payment rates for each eligible area the producer wants to offer.</td>
</tr>
<tr>
<td>7</td>
<td>Advise producers of the limitation on withdrawing and modifying offers according to paragraph 337.</td>
</tr>
<tr>
<td>8</td>
<td>Provide producers CRP-1 Appendix (Exhibit 29) before submitting offers.</td>
</tr>
<tr>
<td>9</td>
<td>Have producer sign completed CRP-1 and CRP-2.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Only 1 signature is required to submit an eligible offer. All signatures are required before COC or CED approves CRP-1.</td>
</tr>
<tr>
<td>10</td>
<td>File all applicable documents, including CRP-2, in the producer’s folder.</td>
</tr>
</tbody>
</table>
B Processing Offers

Offers must be submitted to the County Office where the land is administratively located. The following provides instructions on whether to process an offer.

<table>
<thead>
<tr>
<th>IF land is...</th>
<th>THEN process the offer...</th>
</tr>
</thead>
<tbody>
<tr>
<td>physically located in a county that has reached or exceeded the 25 percent</td>
<td>only if it is for practices eligible under continuous signup marginal</td>
</tr>
<tr>
<td>cropland limitation or other applicable limit as provided in Part 4, or lower</td>
<td>pastureland criteria (CP22, CP29, or CP30).</td>
</tr>
<tr>
<td>percent limitation set by COC for continuous and WRP signups and the county</td>
<td></td>
</tr>
<tr>
<td>does not have an approved waiver before the signup period begins</td>
<td></td>
</tr>
<tr>
<td>physically located in a county that has not reached the 25 percent</td>
<td>in the administering county for any eligible practice.</td>
</tr>
<tr>
<td>cropland limitation or other applicable limit as provided in Part 4</td>
<td></td>
</tr>
</tbody>
</table>

C Cropland Eligibility Determinations

County Offices shall assist producers with cropland eligibility determinations on CRP-2. To determine cropland eligibility for CRP-1, use CRP-2.

Note: County Offices shall use FSA-578 on file for applicable years to verify cropping history entered on CRP-2, items 24 through 27. Aerial photography will not be used to determine cropping history when FSA-578 is on file.

If there is no FSA-578 on file for any year of the applicable 6 years:

- require the producer to provide 2 or more of the following:
  - a signed statement from the person who harvested or planted the crop
  - a neighboring producer’s certification of crops and acreage, on the back of each year’s aerial photography
  - a signed statement from a reliable person with knowledge of which crops were planted on the farm

*--Note: COC or CED may require the producer to provide other documentation to--*

determine cropping history, such as:

- seed, fertilizer, and chemical receipts
- load summary documents or elevator receipts.
332 Submitting Offers (Continued)

C Cropland Eligibility Determinations (Continued)

*--COC or CED shall review and verify all of the documentation submitted to determine--*
whether the cropping history is acceptable by:

- aerial photography, if applicable
- farm visit
- personal knowledge.

A late-filed FSA-578 may be accepted according to 2-CP when there is no FSA-578 on file
for the applicable year being used to determine cropping history for eligibility. The late-filed
fee shall be calculated according to 2-CP.

D Maximum Payment Rate Determination

County Offices shall assist producers by calculating the maximum payment rates, including
multiple scenarios if requested, according to subparagraph 101A.

E Separate Offers

Each producer, depending upon the eligibility determination and the practices selected, shall
submit only 1 offer per tract number per program year per general signup.

Notes: The definition of a tract in 2-CM shall be used for offers being submitted by tract for
CRP purposes.

Multi-tracts shall not be used for submitting CRP offers. Offers must be submitted on
a tract basis.

If a producer submits multiple offers, some of which are not determined acceptable, the
producer may withdraw any or all acceptable offers. Liquidated damages will apply
according to paragraph 577.

Note: Acceptable offers on different tract numbers shall not be combined under 1 tract
number.

Important: Separate CRP-1’s must be completed for:

- each CRP-2 completed
- practices with different lifespans.

Example: Producer offers 5 acres of CP1 with a 10-year lifespan and
20 acres of CP3A with a 15-year lifespan on the same tract.
Only one CRP-2 is completed for the offer. Separate CRP-1’s
must be completed for each practice.
332 Submitting Offers (Continued)

F Final Date for Submitting Offers

The deadline for receiving offers in the County Office is COB on the DAFP-established final date for submitting offers.

G Material for Producers

Provide copies of FSA informational material issued by DAFP to each producer submitting an offer. Provide copies of procedures in this handbook, including the formula process, to producers, if requested.
Completing CRP-2

A About CRP-2

CRP-2 must be completed for all acreage on which producers want to submit offers. The document is used to:

- make eligibility determinations
- calculate maximum payment rates for producers before offers are submitted
- obtain ranking data and statistics on acreage offered for the program.

Note: Before completing CRP-2, the County Office shall ensure that the base limitation is not exceeded. See subparagraph 401 B and 1-DCP, paragraph 57.

All item numbers, except item number 6, must be completed before producer signs CRP-2. All changes to data entered on CRP-2 after the producer signs CRP-2 must be initialed and dated by both the employee making the change and the producer.

Notes: See paragraph 212 for completing CRP-2C for continuous signup.

Separate CRP-1’s must be completed for:

- each CRP-2
- practices with different lifespans. See paragraph 332

CRP-2 is:

- a computer-generated form
- provided for display purposes only.

**Producer’s Certification:**

By signing below I certify to all of the following: (1) All of the Environmental Benefits Index (EBI) factors and subfactors N1 through N5 have been explained to me; (2) I have been informed that placing an approved mixture of covers that benefit wildlife, enhancing the existing cover to provide a mixture that benefits wildlife, if applicable, and/or thinning existing trees and creating and maintaining open areas of approved herbicides cover may enhance the acceptability of the offer; (3) I have been informed that if no offer to thin existing trees is accepted, the thinning must be completed within three years of the effective date of the contract regardless of market conditions or size of the trees; (4) I have been informed of the estimated cost of establishing the cover offered; (5) I have been informed that offering a per acre rental payment less than the calculated annual maximum payment rate may enhance the acceptability of the offer; (6) I have been informed that I may be required to pay for a measurement service on the acreage offered before such acreage may be enrolled in the CRP; (7) I have been informed that if my offer is accepted, then contract management activities, as applicable, are required to be performed on all practices; (8) I have been informed that certain land enrolled in the EQIP, pursuant to regulations at 7 CFR Part 1466 is ineligible for enrollment in the CRP; (9) To the best of my knowledge and belief the acreage of crops and land listed herein, if applicable, are true and correct; and (10) The signing of this form gives USDA representation authorization to enter and inspect crops and land uses and for other purposes on the above identified land.

I understand that an inaccurate certification could result in a payment reduction or loss of program benefits.

25A. Signature (By) 25B. Title/Relationship of the Individual If Signing in a Representative Capacity 25C. DATE (MM-DD-YYYY)

 Isl. John Producer 04-04-2011

**Note:** The following statement is made in accordance with the Privacy Act of 1974 (5 USC 552a - as amended). The authority for requesting the information identified on this form is 7 CFR Part 1410, the Commodity Credit Corporation Charter Act (15 U.S.C. 714 at sec.), and the Food Conservation, and Energy Act of 2008 (Pub. L. 110-246). The information will be used by CCC to consider and process the offer to enter into a Conservation Reserve Program contract, to assist in determining eligibility, and to determine the correct parties to the contract. The information collected on this form may be disclosed to other Federal, State, local government agencies, Tribal agencies, and nongovernmental entities that have been authorized access to the information by statute or regulation and/or as described in applicable Routine Uses identified in the System of Records Notice for USDA/CCD-2, Farm Records File (Automated). Providing the requested information is voluntary. However, failure to furnish the requested information will result in a determination of ineligibility to enter into a Conservation Reserve Program contract.

This information collection is exempted from the Paperwork Reduction Act, as it is required for administration of the Food, Conservation, and Energy Act of 2008 (see Pub. L. 110-246, Title II, Subtitle J, Miscellaneous Conservation Provisions).

The provisions of appropriate criminal and civil fraud, privacy, and other statutes may be applicable to the information provided. RETURN THIS COMPLETED FORM TO YOUR COUNTY FSA OFFICE.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all of its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, political beliefs, genetic information, reprisal, or because all or part of an individual’s income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA’s TARGET Center at (302) 720-2050 (voice and TDD). To file a complaint of discrimination, write to USDA, Assistant Secretary for Civil Rights, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue, S.W., Stop 9410, Washington, DC 20250-9410, or call toll-free at (866) 632-9992 (English) or (800) 877-8339 (TDD) or (966) 377-8642 (English Federal-relay) or (800) 845-6136 (Spanish Federal-relay). USDA is an equal opportunity provider and employer.
334 Providing CRP-1 and CRP-1 Appendix

A Instructions to Producers

Producers shall be advised that:

- CRP-1 (Exhibit 21) is a binding contract; offers are irrevocable after the end of signup. **Note:** Producers withdrawing CRP-1 during the irrevocable period shall be subject to liquidated damages according to paragraph 577.

- Changes are not allowed on the preprinted portion of CRP-1 and CRP-1 Appendix.

- Any changes to the data entered on CRP-1 must be initialed and dated by both the employee making the change and the producer.

- CRP-1 must be signed and dated by all required signatories. See paragraphs 335 and 340.

B What to Give Producers Submitting Offers

When the producer is ready to submit an offer, County Offices shall provide the following to the producer:

- Copy of CRP-2
- CRP-1 (Exhibit 21)
- Copy of CRP-1 Appendix (Exhibit 29).
A Required Signatures

All owners, operators, and tenants who have an interest in the acreage being offered must sign CRP-1, including owners with zero share in CRP annual rental payments. Each person who signs CRP-1 for a share greater than zero:

- has entered into a 10- through 15-year binding agreement with CCC
  
  **Exception:** See landlord and tenant provisions in paragraph 130.

- is jointly and severally liable for complying with terms and conditions of CRP-1.

**Note:** Zero-share participants are not jointly and severally responsible for contract performance.

The following shows forms and signature requirements.

<table>
<thead>
<tr>
<th>Form</th>
<th>Signature Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>CRP-1 (Exhibit 21)</td>
<td>All operators, owners, and tenants who have an interest in the acreage being offered</td>
</tr>
<tr>
<td>Certification Statement (subparagraph 130 E)</td>
<td></td>
</tr>
<tr>
<td>Conservation Plan</td>
<td></td>
</tr>
</tbody>
</table>

**Notes:** See subparagraph B for exceptions on obtaining owners’ signatures.

See 1-CM for accepting FAXed signatures.

B Owners’ Signatures

An owner is required to sign CRP-1 unless a farm is under multiple ownership and the owner’s name is not on the deed to the portion of land being offered on CRP-1.
Signature Requirements (Continued)

C Requirement Exceptions

The requirements for signatures apply unless:

- a trustee of BIA representing the native Americans owning the land signs on their behalf

  **Note:** All CRP-1’s signed by BIA representative on behalf of Native Americans owning the land shall be reviewed by RA. COC shall not approve CRP-1 until RA determines that the required signatures have been obtained.

- a native American has a restrictive 5-year BIA farm lease that has been extended according to BIA provisions.

  **--Exception:** If the land has non-Native American owners who are unknown, CRP-1 may be approved without the non-Native American owners’ signatures if the total non-Native American owner share is 25 percent or less.

  See 3-CM for recording unknown owners or operators in Farm Records.-->
A Register of Offers

County Offices shall complete a register of producers at the County Office as of COB on the final date for submitting offers. If all offers cannot be processed by the final date, the producers listed on the register shall be:

- assisted as soon as possible after the final date for submitting offers
- considered to have submitted their offers on time.

B Late-Filed Offers

Only offers filed before the deadline for submitting offers are eligible.

Using CRP-36 (Exhibit 5), advise producers who submit offers after the deadline that late-filed offers are not eligible.

Note: Producers listed on the register are not considered late-filed offers.
337  Withdrawing and Modifying Offers

A Adjustments to Acreage Offered

A *** measurement service shall be completed for all acreage determined acceptable before CRP-1 is approved. See 2-CP for redeterminations.

Exception:  See paragraph 401.

CRP-1 shall be adjusted to reflect the measured acres. See paragraph 401.

A *** measurement service fee is required on offered acreage using digital imagery. See 2-CP, paragraph 460.

Note:  See paragraph 401 for measurement service requirements for approving CRP-1’s.

B Withdrawing Offers

Producers can withdraw offers anytime before the close of signup. Withdrawals of a part of the acreage offered are not authorized after the end of the signup period. Offers withdrawn after the close of signup shall be assessed liquidated damages according to paragraph 577.

A request to withdraw a CRP offer shall be:

- in writing
- filed in producer’s folder
- accepted.

C Identifying Withdrawn Offers

Identify each offer withdrawn by entering the following on CRP-2:

- the word “Withdrawn” in bold, red letters
- the signature of the person authorizing withdrawal
- the date withdrawal is made.

When an offer is withdrawn before the close of signup, if requested, provide a new CRP-1 to producers for resubmitting an offer by the final signup date. See subparagraphs 332 F and 337 B.
Succession to Offers

A General Policy

Succession-in-interest rights do not apply to CRP offers to participate, except for:

- immediate family members of the producer that submitted the offer, according to subparagraph B

- a person, or entity, taking title to the land offered when the producer that submitted the offer dies.

  Note: See subparagraph C.

All other applicable eligibility requirements shall apply to the successor.

  Note: See paragraph 555 for succession-in-interest to approved CRP-1.

B Succession by an Immediate Family Member

An immediate family member of the producer who submitted the offer may succeed to an acceptable offer, if all of the following are met:

- producer that submitted the offer met all eligibility requirements

--successor signs CRP-2, item 25, acknowledging acceptance of offer as originally submitted

  Note: No modifications to the original offer are authorized. Successor cannot modify or revise the original offer.

- immediate family member succeeding to the offer meets all other eligibility requirements before CRP-1 is approved.

Successor shall be liable for any liquidated damages.

Immediate family members include parents, children, siblings, grandparents, adopted children, and spouse.
Succession When Producer Who Submitted Offer Dies

Succession-in-interest rights apply to any acceptable CRP offer when the:

- producer who submitted the offer dies before CRP-1 approval
- person or entity taking title to the land elects to succeed to the offer.

The person or entity taking title to the land may succeed to an acceptable offer, if all of the following are met:

- producer that submitted the offer met all eligibility requirements
- successor signs CRP-2, item 27, acknowledging acceptance of offer as originally submitted

Note: No modifications to the original offer are authorized. Successor can not modify or revise the original offer.

- successor meets all other eligibility requirements before CRP-1 is approved.

Successor shall be liable for any liquidated damages.

D Notify Eligible Successors

COC shall notify eligible successors to offers that:

- they have 60 calendar days from the date of notification to succeed to the acceptable offer
- the offer will be null and void if it is not succeeded to by an eligible successor within 60 calendar days of notification
- no revisions or modifications, other than succession to the original offer, are authorized.
339 Errors and Omissions Policy

A Identifying Erroneous Records

Erroneous offer records include:

- errors detected in ranking data elements
- changes to CRP-2 data elements:
  - including changes to offered acreage because of measurement service
  - resulting from appeal or technical redeterminations.

Any timely-filed offers found by County Offices to contain incorrect ranking data are considered erroneous. Changes in the CRP-2 data may result in any of the following:

- offer being ineligible
- EBI score increasing
- EBI score decreasing.

A change made to acres of a soil may change the maximum payment rate or the EBI score and may require the offered rental rate to be adjusted by the producer.

B Identifying Omitted Records

Omitted records include:

- any timely filed eligible signup 45 offer not successfully loaded and/or submitted by the end of signup, COB June 14, 2013, or COB June 21, 2013, where County Offices used a register

- timely-filed offers which were originally determined ineligible and not ranked that are determined eligible through the appeals process or any technical redeterminations.

Important: Late-filed offers are not omitted offers. Both CRP-1 and CRP-2 must be completed and signed by an eligible producer and received in the County Office by the end of signup to constitute an offer. CRP-1 or CRP-2 alone does not constitute an offer.

Note: See 1-APP for handling appeals.
C Policy About Errors and Omissions

*--For offers that the county believes were erroneously processed in COLS and need to be corrected according to this policy, the county needs to submit to the State Office a brief explanation of the error and how it occurred along with a copy of the complete offer scenario in COLS:

- with the erroneous information before correction
- with the corrected information.

The offer shall not be further processed until confirmation is received from the State Office that the corrected information can be used in accordance with this paragraph.*
C Policy About Errors and Omissions

All eligible offers that were omitted and all submitted offers that are later determined erroneous shall be reprocessed by the County Office using the COLS software to determine whether the offer is acceptable. This includes all offers for which CRP-1 has not been approved, including those where the producers have been issued letters indicating the offer was acceptable. For errors detected after approving CRP-1, see paragraph 638.

Important: Only COLS software shall be used by County Offices to process omitted and erroneous offers. See subparagraph D. County Offices must submit a copy of the “Offer Scenario” printed from the COLS Submit Offer Screen to the State Office to verify that the omitted or corrected offer was entered into the COLS software. Erroneous and omitted offers must be entered into the COLS software.

COC shall reject any offer that is determined to be unacceptable, including offer records for which producers have been issued letters of acceptability. When offers are determined to be ineligible after CRP-1 has been approved, County Offices shall follow paragraph 638.

*--Note: All signup 45 erroneous and omitted offers must be processed by COB September 6, 2013, with the exception of offers determined eligible through the appeals process.

D Handling Erroneous Offers With Decreases in Maximum Payment Rate

Certain erroneous offer data may cause a change and subsequent recalculation of the maximum payment rate. If the maximum payment rate (“Maximum Payment Rate” block in COLS) is decreased because of the recalculation, then the producer must agree to accept the lower of either of the following:

- recalculated maximum payment rate
- original rental rate offer.

Note: The producers may withdraw the offer without assessment of liquidated damages.

E Handling Erroneous Offers with Increases in Maximum Payment Rate

If the maximum payment rate (“Maximum Payment Rate” block in COLS) is increased because of the recalculation, then the producer must agree to the offered rental rate from the original CRP-2. If the producer does not agree to accept the offered rental rate from the original CRP-2, then the producer may withdraw the offer without liquidated damages.
A Reviewing Offers

*--COC or CED shall ensure that:--*

- producers have submitted offers for CRP-1 by tract and year
- CRP-2 was signed by 1 eligible producer
- CRP-1 was signed
- CRP-1 signers have an interest in designated acres
- CRP-1’s contain at least 1 eligible signature

Note: Notify producers that they have 30 calendar days from the date of notification informing them that their offer was acceptable to obtain all signatures, or CRP-1 will not be approved.

- offers that are not acceptable are kept on file for 1 year after the acceptable offer list is received.

B Submitting Offers for the National Office Ranking

County Office shall ensure all offers are submitted COB on the end of signup for review and evaluation by the National Office.

See COLS User Guide for submitting offers to the National Office for ranking.

C Request for Information

After data is reported to the State Office, inform anyone who requests data that the request must be submitted in writing according to 2-INFO.

Note: Release requested information only according to 2-INFO.
A Eligibility Review

*--COC or CED shall:--*

- review the list of acceptable offers to ensure that all eligibility criteria have been met for all offers listed as acceptable by the National or State Office

- not approve CRP-1 if producer or the offered acreage does not meet eligibility criteria even though the offer is listed as acceptable by the National or State Office.

B Offer Not Acceptable

If the offer is not acceptable, advise the producer that:

- offer was not acceptable
- eligible land may be reoffered in a later signup.

C Procedure for Notifying Producers

*--COC or CED shall notify producers, using CRP-23, CRP-24, and CRP-26 (Exhibit 5), of the status of their offer as soon as the list of acceptable offers is received and an eligibility review was conducted.--*

Provide NRCS or TSP a list of acceptable offers.
D Offer Acceptable and Clearly Eligible

If the offer is determined acceptable, advise the producer:

• to notify the County Office if the producer wants the offer approved

  **Note:** The producer’s notification to the County Office is not required to be in writing. The County Office shall notate the producer’s notification and include the notation in the producer’s CRP folder.

• that a conservation plan **must** be developed by NRCS or TSP and approved by the Conservation District before CRP-1 can be approved by COC

  **Note:** County Offices must provide to NRCS or TSP all documents necessary to complete the conservation plan, including, but not limited to the following:

  • CRP-1
  • CRP-2
  • maps.

• of provisions for starting practices. See Part 11.

342-365 (Reserved)
B Original Plan Development

NRCS and Conservation Districts will share conservation planning responsibilities for CREP. Technical work on CREP will be completed by NRCS or Conservation District employees. Field offices will make the decision on who will do the work based on workload and available staffing. CREP conservation plans must be completed or supervised by an employee with the appropriate job approval authority for the Riparian Buffer practice. Both NRCS and the Conservation District will sign CREP conservation plans.
A Conservation Plan

A conservation plan is a record of the producer’s decisions and supporting information for the treatment of a unit of land or water as a result of the planning process that meets NRCS FOTG quality criteria for each natural resource and addresses economic and social considerations. The plan describes the schedule of operations and activities required to solve identified natural resource concerns.

A conservation plan may contain only information related specifically to CRP, or it may be a part of an overall total resource management system in which numerous conservation programs may be used to meet the natural resource needs.

B Original Plan Development

An approved conservation plan is required before CRP-1 can be approved. NRCS or TSP must complete a field visit, if necessary, before approving a conservation plan.

County Offices must provide to NRCS or TSP all documents necessary to complete the conservation plan, including, but not limited to the following:

- CRP-1
- CRP-2
- maps.

The approved conservation plan shall be developed by:

- the participant
- NRCS or TSP.

NRCS or TSP is responsible for the following conservation planning, practice implementation, and certification activities:

- environmental evaluation during the conservation planning process
- technical leadership for planning and implementation
- technical concurrence on the conservation plans and revisions
- adherence to subparagraph 367 F about compliance with NEPA, NHPA, ESA, and related laws, regulations, and executive orders.
B Original Plan Development (Continued)

NRCS or TSP shall ensure that the approved conservation plan:

- contains all the practices necessary for the successful establishment and maintenance of the vegetative cover on all of the acres offered for CRP
- is technically adequate for achieving CRP objectives
- incorporates all requirements for Federal, State, or local permits when construction activities are planned
- is reviewed and approved by the Conservation District

*—Exception: CED may approve the plan without the Conservation District signature only if the Conservation District refuses to review the plan. In those rare instances, CED shall document in the COC minutes Conservation District refusal to review the plan, including reasons why the Conservation District refused to review the plan.

Note: The Conservation District may assist the producer in planning and implementing conservation management practices and management systems.

- ensures that the CRP cover will not be disturbed during the primary nesting or brood rearing season, as determined by STC in consultation with the State Technical Committee

Note: See paragraph 427

- for CP22 when the producer elects natural regeneration, provides all of the following:
  
- no C/S shall be paid for the practice

Exceptions: See Exhibit 11
B Original Plan Development (Continued)

- the producer will plant the approved cover at no cost to FSA or CCC according to a revised conservation plan if the riparian buffer is not established through natural regeneration within 2 years of CRP-1 effective date

- conservation practice code 647, Early Successional Habitat Development/Management, is used to identify natural regeneration

- NRCS or TSP shall spot check the site at the end of the second year to determine whether the riparian buffer is established and meets the standards and specifications for NRCS conservation practice code 391A, Riparian Forest Buffer.

*---Note: NRCS or TSP must immediately notify COC or CED:--*

- of the result of the spot check
- that the participant must plant the approved cover with no C/S according to a revised conservation plan, if applicable.

*---Note: COC or CED must notify participant of the results of the spot check.

Before approving CRP-1’s, COC or CED shall review and approve the plan to ensure that:

- has been signed and agreed to by:
  - all signatories to CRP-1
  - NRCS or TSP
  - Conservation District
- COC or CED

Note: COC or CED may approve the plan without the Conservation District signature if the Conservation District refuses to review the plan.

- for natural regeneration of CP22, requires:
  - the producer to plant the approved cover with no C/S if the approved cover is not established within 2 years of CRP-1 effective date
  - NRCS or TSP to spot-check the site at the end of the second year to determine whether the riparian buffer is established and meets the standards and specifications of NRCS conservation practice code 391A, Riparian Forest Buffer
B Original Plan Development (Continued)

- includes all of the eligible acres offered for CRP
- includes required maintenance for weed, insect, and pest control for life of CRP-1
- including contract management activities to be taken to implement the conservation plan, as applicable
- includes only practices requested on CRP-1
- includes C/S for eligible practices only

**Important:** See Exhibit 11 for eligible C/S for natural regeneration of CP22.

- includes application rates, such as the amount of seed, lime, and fertilizer, that are consistent with practice specifications

**Note:** The conservation plan may reference the NRCS Job Sheet for the application rates. The producer **must** be provided a copy of the Job Sheet with the conservation plan.

- meets the objectives of CPA, when applicable
- includes the following:
  - FSA field number and acreage
  - timeframe and deadline to implement the approved practice or practices and management activities
  - a map of the acres to be enrolled.

*--CED shall reject the plan if these requirements have not been satisfied.--*
C  Application of Practices

The approved conservation plan shall include measures necessary for the successful establishment and maintenance of the approved practices and required management activities. This applies regardless of eligibility for C/S funds.

National practice CP12 may be included in the approved conservation plan only to enhance certain other practices included in the approved conservation plan if the:

- producer wants to establish a wildlife habitat
- area is suited for the successful establishment of the practice.

Note: See Exhibit 11 for practices eligible to be used in conjunction with CP12.

D  Practice Performance Requiring Permits

Persons who want to perform practices on land they do not own or to install practices that require State or Federal permits are responsible for obtaining:

- the easements, permits, or rights-of-way
- other permission necessary to perform and maintain practices.

COC or agency technician need not verify the producer’s statement about the existence of permits, easements, right-of-way, etc., with the issuing authority.

- NRCS policy may be more restrictive in some States.
- If a practice meets specifications, approved C/S shall be paid even if it is later found that the producer did not have the necessary authorities.

The person receiving C/S assistance is responsible to CCC for any losses sustained by the Federal Government if the person:

- infringes on the rights of others
- does not comply with applicable laws and regulations.
A  Conservation Plan Development

Upon notification that the offer is acceptable, the designated NRCS conservationist will work with the producer to develop a conservation plan or incorporate CRP needs and practices into an existing conservation plan. The designated conservationist will also coordinate with the appropriate agencies relating to the planning and installation of wildlife habitat and forestry practices.

B  Plan Requirements

An approved conservation plan:

- includes all of the eligible acres offered for CRP
- prohibits harvesting or grazing of CRP acreage for the life of CRP-1
  
  **Exception:** Managed or emergency haying or grazing.

- has suitable planned cover for the soil types enrolled
- includes practices required for the establishment of permanent cover
- contains the practices necessary for the successful establishment and maintenance of the approved cover on all acres enrolled
- contains practices necessary to control weeds, insects, and pests
- encourages the best method for maintenance of the approved cover, such as prescribed burning or other options
- contains required management activities
- meets the specific environmental objectives of CPA if applicable
- is technically adequate for achieving CRP objectives
- ensures that the CRP cover will not be disturbed during the primary nesting or brood rearing season, as determined by FSA STC in consultation with the State Technical Committee (see paragraph 427)
- includes engineering plans.
Part 11  Conservation Plans and Contract Support Documents

367 Conservation Planning

A Conservation Plan Development

Enrollment in the Washington CREP is authorized for up to 100,000 acres in portions of 32 counties. As of August, 2011, total CREP enrollment was 12,623.4 acres.

Before approving CRP-1’s for CREP, County Offices shall enter “CREP” in item number 3 of the CRP-1 along with the contract number.
367 Conservation Planning (Continued)

C Conservation Plan Map

The conservation plan map shall show the number, field boundaries, easements, and acres, as identified by FSA. The land use shall be identified as “Cropland-CRP-Cover type.”

D Additional Material to Include in the Conservation Plan

In addition to the material outlined in the National Planning Procedures Handbook, the conservation plan shall include information or job sheets on the following:

- vegetative or cover establishment
- herbicides, insecticide, or mechanical weed control.

E Planning Policy

Technical references and conservation planning policy include:

- National Planning Procedures Handbook
- FOTG, Sections III and V
- GM 180 Part 409.
F National Environmental Policy Act and Other Requirements

NEPA, NHPA, ESA, and other related laws, regulations, and executive orders require Federal agencies to consider the potential impacts of their proposed actions upon the human environment. Therefore, before approving CRP-1’s, land applications of animal waste, or construction of wind-powered generation devices, FSA must ensure that all potential impacts to the human environment have been considered according to 1-EQ, 7 CFR Part 799, and GM 190 Part 410, and adhere to the following.

<table>
<thead>
<tr>
<th>Item for Approval</th>
<th>Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>CRP-1</td>
<td>FSA:</td>
</tr>
<tr>
<td></td>
<td>• shall use NRCS-CPA-52 completed by NRCS or TSP during the conservation planning process to determine potential impacts of the proposed CRP-1 and associated CP’s on the human environment</td>
</tr>
<tr>
<td></td>
<td>• approval official will ensure that all appropriate environmental requirements have been met, which should include the following:</td>
</tr>
<tr>
<td></td>
<td>• a completed NRCS-CPA-52, after the field visit portion if necessary, of the conservation planning process is completed</td>
</tr>
<tr>
<td></td>
<td>• any related documentation to support conclusions made about potential impacts on environmental resources and special issues identified in the completed NRCS-CPA-52</td>
</tr>
<tr>
<td></td>
<td>• FSA completed NRCS-CPA-52, Sections P, Q, and R only after completing all necessary consultations with SHPO, THPO, American Indian Tribes, other consulting parties concerned with cultural resources, FWS, and NOAA Fisheries.</td>
</tr>
</tbody>
</table>

**Note:** For proposed actions that occur within wetlands or floodplains, see 1-EQ for guidance.

<table>
<thead>
<tr>
<th>Land Application of Animal Waste, Sludge, or Agricultural By-Product</th>
<th><em>--Before COC or CED approves the application of animal waste,</em>--*sludge, or agricultural by-product, FSA shall:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• complete FSA-850, in addition to complying with the requirements of paragraph 635</td>
</tr>
<tr>
<td></td>
<td>• include FSA-850, with appropriate supporting documentation and consultation records as part of the producer’s CRP file.</td>
</tr>
</tbody>
</table>

| Construction of Wind Turbines                                      | *--FSA shall complete an environmental review, using FSA-850 to ensure that any potential impacts on NRCS-CPA-52 do not adversely impact any listed threatened and endangered species, which will then be forwarded to SEC for approval before COC or CED approves the wind turbines.--* |

2-29-12         2- CRP (Rev. 5) Amend. 8
G  Other Technical Assistance Sources

Participants may use conservation planning, practice implementation, and certification services of certified persons other than NRCS, such as:

- private businesses or consultants
- other organizations
- TSP’s
- Federal, State, and local government agencies, such as:
  - State wildlife agencies
  - State forestry agencies
  - State water quality agencies.

**Note:** See Conservation Programs Manual, Part 504 for information regarding third party vendors.

The NRCS designated conservationist may accept conservation plans previously developed by conservation partners or consultants provided the plan meets CRP requirements and NRCS technical requirements.

H  Technical Error

If a technical error is discovered resulting in an incorrect conservation plan, NRCS or TSP will:

- immediately contact the appropriate participant
- revise the system to meet CRP standards.
A Conservation Plan and C/S Agreement

For CRP, the conservation plan shall be developed to meet identified resource conservation needs. The conservation plan may or may not extend across program boundaries.

The C/S agreement is developed to meet specific program needs. For CRP, the C/S agreement is the conservation plan.

B Plan/Schedule of Operations

The designated conservationist shall assist producers in preparing the conservation plan using NRCS-approved electronic forms. Other approved forms, including electronic forms, may be used for contract support documents.

C Use of Existing Plans

Existing conservation plans, if applicable, may be used in preparing the conservation plan for CRP. NRCS, FSA, and the producer shall each receive a copy of the conservation plan. All entries shall be legible, and use NRCS-approved electronic forms. Plans shall also include:

- conservation planning map
- planning legend
- applicable job sheets referred to on an NRCS-approved electronic form.
D Required Signatures for Conservation Plan

For CRP, NRCS-approved electronic forms must be signed by all of the following:

- CRP producers listed on CRP-1
- designated conservationist
- conservation district representative.

*--Note: See paragraph 366 for requirements before COC or CED approves the conservation plan.

FSA COC or CED shall have concurrence with the Contract Support Document for CRP- acreage. If CRP acreage is not in a conservation district or the conservation district refuses to sign the conservation plan, the State Conservationist shall delegate authority to approve the conservation plan.

E Conservation Plan/Contract Support Document Requirements

An approved conservation plan includes:

- all of the eligible acres offered for CRP
- required maintenance for weeds, insects, pests, or other undesirable species for the life of CRP-1
- only those practices requested in CRP-1
- application rates that are consistent with practice specifications.

Note: Any other changes in regard to the above items may void CRP-1.
A Overview

Many of the documents needed for CRP case files are available electronically. However, a few of the required documents, such as CRP-1 and CRP-2, are not available electronically and must be filed manually. CRP documents shall be filed according to State policy.

Note: County FSA Offices shall:

- maintain the original CRP-1, CRP-1 Appendix, and CRP-2
- provide NRCS with a copy of any documents needed for NRCS CRP case files.

Historically, CRP documents have been contained in a 6-part folder. The following subparagraphs provide suggestions for assembling and filing CRP documents.

B Standard File Folder

If a standard file folder is used, the arrangement of the contents of the first cover should be:

- conservation plan map and legend
- tree planting plan provided by the State Forestry Agency
- job sheets referenced from the conservation plan
- soil map
- interpretative information containing HEL designations
- CRP-2
- erosion and predominant soil worksheets.

The contents of the second cover should be:

- NRCS-approved forms
- CRP-1
- AD-862
- other support data.

Note: Each document should be filed with the latest version in front.
NRCS Assembling and Filing CRP Documents (Continued)

C First Cover of Six-Part Folder

If a six-part folder is used, the following arrangement is specified for continuity and uniformity. The arrangement of the documents for each cover from front to back should be:

- CRP-1
- letters to and from the producer
- location map, if used.

D Second Cover of Six-Part Folder

The following is the order for the second cover:

- NRCS-LTP-013, latest on top
- NRCS-CPA-06.

E Third Cover of Six-Part Folder

The following is the order for the third cover:

- conservation plan map and legend
- soil map
- soil interpretive information containing HEL designations.

F Fourth Cover of Six-Part Folder

The following is the order for the fourth cover:

- NRCS-CPA-1156, latest on top
- NRCS-CPA-1155.
G  Fifth Cover of Six-Part Folder

The following is the order for the fifth cover:

- job sheets referenced from the Conservation Support Document
- CRP-2
- National/State ranking forms.

H  Sixth Cover of Six-Part Folder

The following is the order of the sixth cover:

- AD-862, latest on top
- other support data.

I  Assistance Notes

Appropriate documentation shall be included in the conservation assistance notes in the FOCS data base. Do not duplicate this information on NRCS-LTP-013.

J  Disposition of Completed or Terminated CRP-1’s

Record the termination or expiration date on each CRP-1. NRCS shall follow the Records Management Guide (120 GM, Part 408) for records maintenance and disposal.

370-400  (Reserved)
401 Approving and Numbering CRP-1’s

A Requirements Before Approval

Before approving CRP-1’s, County Offices shall:

- ensure that a separate CRP-1 is completed for:
  - each CRP-2 or CRP-2C
  - practices with different lifespans

  **Note:** See paragraphs 211 and 332.

- determine acres to be enrolled by completing a paid-for measurement service

  **Exceptions:** Measurement service is not required for:
  
  - official fields
  
  - any acreage currently enrolled that has been reoffered and accepted, if the specific area accepted was measured before enrollment.

  **Notes:** In early signup periods, offers were accepted by farm. Offers are now required to be by tract. If acreage currently enrolled were required to be reoffered separately because the acreage is located on more than 1 tract, the acreage is required to be measured.

  *-- The use of TERRA is considered a measurement service. No measurement service fee is charged for the use of TERRA. If staking and referencing or in office measurement, other than TERRA, is performed, see 2-CP, paragraph 460 for fees.--*

- adjust the acreage on CRP-1 as appropriate according to the completed measurement service

- ensure that DCP acres and CRP acres do not exceed cropland on the farm, according to subparagraph 401 B

- complete approved farm reconstitutions
Approving and Numbering CRP-1’s (Continued)

A Requirements Before Approval (Continued)

- complete a second party review of all eligibility requirements and maximum payment rate calculations
- *--ensure that CCC-931 or CCC-933, as applicable, has been filed for all producers with a share greater than zero, including members of entities and joint operation, and updated in the web-based Subsidiary Eligibility System before CRP-1 approval

Notes: CCC-931 must be filed to ensure that CRP participants are aware of payment eligibility for new CRP contracts or revised CRP contracts where there is a succession. This does not require that a prospective CRP participant be eligible for payments, only that CCC-931 be filed.

If a zero share producer revises their share, the appropriate AGI form is required. See paragraph 131.

- review the multiple county producer list with other County Offices
- ensure county cropland limit eligibility according to Part 4

Note: The first five CREP offers per county must be reviewed by STC before COC or CED approval.

- determine the total annual rental rate for the acreage being offered and all previously approved CRP-1’s
- ensure that NRCS has terminated all applicable WBP agreements.

Note: File a copy of the terminated WBP agreement in the producer’s CRP folder.
A Requirements Before Approval (Continued)

For general signups, a producer may change CRP practices only if all of the following conditions are met:

- original offer was accepted
- CRP-1 has not been approved
- the EBI score of the new practice is equal to or greater than the EBI score of the existing practice.

Important: When determining whether the EBI score of the new practice or practices is equal to or greater than the EBI score of the original practice or practices, COC or CED must use the same EBI criteria that was used for the original offer. See CRP-2 for EBI score.

For continuous signup, a producer may change practices if CRP-1 has not been approved.
Approving and Numbering CRP-1’s (Continued)

B Approving Contracts

Approve CRP-1’s if:

- offer is included on the list of acceptable offers

  Note: This is not applicable to continuous signup contracts.

- for continuous signup CRP-1’s, all applicable requirements according to paragraph 181 have been met

- all required signatures have been obtained on all related CRP forms and plans

- a conservation plan is approved for the acreage

- the current CCC-931 or CCC-933, as applicable, has been filed for all producers with a share greater than zero and updated in the web-based Subsidiary Eligibility System

- the conservation plan is consistent with policies in paragraph 366

- DCP contract acres and CRP acres do not exceed the cropland on the farm.

If the total acres, excluding any marginal pastureland, such as WBP noncropland acres based on the effective date of CRP-1’s, exceeds DCP cropland for the farm, the producer shall designate which of the following to reduce:

- CRP acres being offered
- DCP acreage
- GRP acreage being offered.

Important: Land transitioned under TIP CRP-1R is not subject to DCP base reduction.

Notes: Reduction of CRP acres offered shall be completed before the end of the applicable signup period.

The reduction of applicable acres shall be to the extent the total CRP and DCP cropland acreage does not exceed the cropland for the farm.

Acreage enrolled in an approved CRP-1 cannot be reduced.

County Offices shall calculate the number of acres on a farm that may be enrolled in CRP or GRP without requiring a reduction to DCP base acres at the time the producer submits CRP-2, CRP-2C, or CCC-920.
B Approving Contracts (Continued)

When the producer determines to reduce DCP base acres on a farm because of enrollment into CRP or GRP, the producer must complete CCC-505 at the time the acres are being offered for CRP or GRP.

Note: Some producers may elect to modify the number of acres to be offered for CRP or GRP instead of reducing DCP base acres on the farm.

Reduce DCP acreage and complete CCC-505 according to 1-DCP.

- acreage determinations have been made and verified by a * * * measurement service

Exceptions: Measurement service is not required for:

- official fields
- any acreage currently enrolled that has been reoffered and accepted, if the area accepted was measured before enrollment.

Notes: In early signup periods, offers were accepted by farm. Offers are now required to be by tract. If acreage currently enrolled were required to be reoffered separately because the acreage is located on more than 1 tract, the acreage is required to be measured.

*--The use of TERRA is considered a measurement service. No measurement service fee is charged for the use of TERRA. If staking and referencing or in office measurement, other than TERRA, is performed, see 2-CP, paragraph 460 for fees.--*

- all acreage eligibility determinations have been made.
COC Responsibilities

COC, or designee, shall:

- sign and date each eligible CRP-1 if:
  - listed as an acceptable offer
  
  Note: This is not applicable to continuous signup contracts.
  - requirements in this paragraph have been met
  
- not approve CRP-1’s for persons listed in subparagraph D
  
- follow conflict of interest provisions in 22-PM, Part 9.

D Approval Responsibilities

An STC or DAFP representative shall review certain CRP-1’s before approval. The following shows required reviews, persons responsible for review, and persons responsible for approval or disapproval.

<table>
<thead>
<tr>
<th>CRP-1’s for...</th>
<th>MUST be reviewed by...</th>
<th>BEFORE approval or disapproval by...</th>
</tr>
</thead>
<tbody>
<tr>
<td>• COC members</td>
<td>DD</td>
<td>DD.</td>
</tr>
<tr>
<td>• County ES employees</td>
<td>DD</td>
<td>DD.</td>
</tr>
<tr>
<td>• FSA County Office employees</td>
<td>DD</td>
<td>DD.</td>
</tr>
<tr>
<td>• other County USDA employees</td>
<td>DD</td>
<td>DD.</td>
</tr>
<tr>
<td>• Conservation District board members</td>
<td>DD</td>
<td>DD.</td>
</tr>
<tr>
<td>State Office employees</td>
<td>STC</td>
<td>STC.</td>
</tr>
<tr>
<td>STC members</td>
<td>DAFP</td>
<td>SED.</td>
</tr>
<tr>
<td>SED’s</td>
<td>DAFP</td>
<td>STC.</td>
</tr>
<tr>
<td>Other FSA employees</td>
<td>DAFP</td>
<td>STC.</td>
</tr>
</tbody>
</table>

Note: Reviews must be completed for any entity for which the employees, who are subject to a required review, have a substantial beneficial interest, according to 1-PL or 4-PL, as applicable.
D Approval Responsibilities (Continued)

Persons making the required reviews shall ensure that all:

- eligibility requirements are met
- required entries on CRP-1, CRP-2, and CRP-2C are completed.

SED or STC, as applicable, shall not approve CRP-1’s unless authorized by DAFP in writing.

*--E Numbering CRP-1’s for CREP and FWP--*

Number CRP-1’s according to the following

<table>
<thead>
<tr>
<th>WHEN...</th>
<th>THEN...</th>
</tr>
</thead>
<tbody>
<tr>
<td>assigning original CRP-1 number</td>
<td>• <em>--number CRP-1’s in the sequence COC or CED approves--</em> CRP-1’s</td>
</tr>
<tr>
<td></td>
<td>• use only 1 series regardless of FY CRP-1 is approved</td>
</tr>
<tr>
<td></td>
<td><strong>Example:</strong> 1, 2, 3, etc., up to 8999.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Use 9000 to 9999 as temporary numbers only.</td>
</tr>
<tr>
<td></td>
<td>• use the original assigned number for the life of CRP-1.</td>
</tr>
<tr>
<td>revising CRP-1</td>
<td>• use the original assigned CRP-1 number</td>
</tr>
<tr>
<td></td>
<td>• add an alpha suffix beginning with “A”.</td>
</tr>
<tr>
<td></td>
<td><strong>Example:</strong> 1A, 1B, 1C, etc., up to suffix “Z”. See paragraph 546.</td>
</tr>
</tbody>
</table>

If transferring CRP-1 to another County Office or State:

- the transferring County Office sends original CRP-1 and keeps a copy
- the receiving County Office assigns its next sequential number.

**Note:** Do not assign a suffix to CRP-1 if all land under CRP is transferred.

F County Office Action

After requirements in subparagraphs A through C have been met, notify producer of approval using CRP-24 *(Exhibit 5)*.

*--All CRP-1’s approved by COC or CED for CREP and FWP must be loaded into the--* System 36 according to 1-CRP, paragraphs 300.4 and 300.5.
Par. 402

CRP-1 Period

A Length of Time

The CRP-1 period shall be 10 through 15 FY’s. See Exhibit 32 for CRP-1 effective dates and corresponding expiration dates.

B Example of 10-Year CRP-1

CRP-1 period for FY 1991 CRP-1’s will end on September 30, 2000.

See Exhibit 20 for signup periods and program years.

C Effective Date

*--For signup 45, the effective date of CRP-1 shall be October 1, 2013, for either of the--*

• new land

• acreage that is currently enrolled in CRP at the time of signup that expires on
  *--September 30, 2013, and is re-enrolled during signup 45.--*

Notes: Harvest of the prior year’s agricultural commodity crop is permitted after October 1 without a payment reduction.

For acreage not enrolled in CRP at the time of signup, grazing is prohibited beginning, the later of, for acreage with a CRP-1 effective date of October 1:

• 10 calendar days after COC or CED approves CRP-1
• October 1 of the first year of CRP-1.

COC shall notify producers of this policy.

See paragraph 213 for effective dates and grazing restrictions of CRP-1’s approved under continuous signup provisions.

403-425 (Reserved)
A Establishing Required Cover on CRP-1

If a producer elects not to follow NRCS recommendations for proper stand establishment, the producer, NRCS and COC shall sign the form “Variances from CRP Guidelines (WA Exhibit 1). However, the producer will be held accountable for achieving the contracted cover, including the required species and stand density, as called for the CRP-1, CRP-2, conservation plan and related documents.

Important: COC’s shall not approve the use of Variances from CRP Guidelines form unless they believe the proposed alternative has a reasonable chance of success.

B Burning

Where burning of the existing cover will be utilized prior to planting the CRP cover, WA Exhibit 7 must be reviewed, the participant must complete CRP Burning Certification Form, and the materials in pages 3-10 of the exhibit must be provided to the producer.
426 Establishing Approved Cover

A Establishing Required Cover on CRP-1

CRP participants shall agree to establish and maintain approved practices according to the conservation plan of operations.

*--Use of hand-collected seed is not authorized for CRP. COC or CED shall not--*
approve CRP-1 when hand-collected seed was or will be used to establish the cover.

Exception:  If verification of PLS factor, germination, and seed quality is provided, hand-collected seed may be used to establish the CRP cover.

Note:  See subparagraph 491 D.

Practices included in the CRP conservation plan must cost-effectively achieve a reduction in soil erosion to maintain:

- the productive capacity of the soil
- water quality improvements
- wetland or wildlife protection
- reduced airborne wind particulate matter
- public wellhead protection
- environmental benefit achievements.

NRCS or TSP shall encourage the participant to:

- where appropriate, plant perennial seeding and planting mixes that achieve the highest environmental benefits for each CRP practice
- where practical, as determined by NRCS or TSP, use State-certified seed for CRP
  
  Note:  However, common seeds, especially for natives, may be used when certified seed is not available.

- where appropriate, avoid the use of single, introduced species
- use native legumes, forbs, shrubs, and plant mixes
- ensure that the approved seeding mix does not include weed species, including noxious weed species.
A Establishing Required Cover on CRP-1 (Continued)

*--COC or CED, or designee, shall only agree to conservation plans or approve CRP-1’s--*

that do not include C/S for:

- hand-collected seed, except when verification of PLS factor, germination, and seed quality is provided

- practices tailored to specifically enhance or change the commercial production

**Exception:** Haying or grazing of grasses or harvesting forest products from CP3 and CP3A when CRP-1 expires.

- purchasing and establishing species of grasses, legumes, trees, and other vegetative cover that are not adaptable to the area without excessive cost to establish the cover

- providing any plastic mulch or supplemental irrigation water, except where CP5, CP5A, CP16, CP16A, CP17, CP17A, CP22, and CP25 will be established in areas where the average annual precipitation is 25 inches or less.

Until a final status review has been completed by NRCS or TSP or the participant has *

*--certified practice completion, COC or CED in consultation with NRCS or TSP, may allow--*

participants to spray and mow the acreage under contract at any time, if this activity is required in the conservation plan to establish the approved cover.

**Note:** This includes mowing and clipping of a nurse crop that was used to establish the approved cover.
Establishing Approved Cover (Continued)

B When to Start CRP Practice

Producers shall be advised that:

- approved CRP practices may be started:
  - after submitting the offer to the County Office

  **Note:** Starting a practice before final approval of CRP-1 is at the producer’s own risk.

- when notified that CRP-1 has been approved

- where practicable, as determined by NRCS or TSP, State-certified seed shall be used for CRP

  **Note:** However, common seeds, especially for natives, may be used when certified seed is not available.

- C/S payments are ineligible if:
  - offer is not accepted
  - designated acres are ineligible
  - practice does not meet specifications
  - practice is not included in the approved conservation plan.

  **Note:** See paragraph 429 for C/S when modifying approved conservation plan.

C Permanent Covers

The approved conservation plan **must** include the establishment of a permanent vegetative cover:

- according to the planting timespan requirement in Exhibit 11
- before the presence of an erosion problem.

The participant is eligible to receive C/S assistance after CRP-1 is approved and the approved cover is seeded, or for approved water cover, required establishment activities, such as earth moving and blocking drains, have been completed.
C Permanent Covers (Continued)

Approved permanent cover is required to be seeded within 12 months after the CRP-1 effective date, according to Exhibit 11. However, NRCS or TSP, in consultation with COC or CED, may, in developing the conservation plan, permit up to an additional 12 months, not to exceed 24 continuous months, to seed or install the approved permanent cover if any of the following apply:

- the specific site conditions require additional time to seed the approved cover to not adversely impact the natural resources of the site or surrounding areas
- the approved grass seed, grass mixture, trees, or shrubs are not available
- seed costs will create an adverse economic hardship on the participant.

**Example:** Jane Smith’s signup 39 CRP-1 for 100 acres was approved with an effective date of October 1, 2010. The approved permanent cover is required to be seeded by October 1, 2011, according to Exhibit 11. The next normal planting date for the approved permanent cover begins in May 2011 and ends in June 2011. Because of the specific site conditions, planting the entire 100 acres to the approved permanent cover at 1 time would cause severe erosion on the acreage enrolled and cause similar adverse impacts on the surrounding fields. NRCS, in consultation with COC or CED, may, in developing the conservation plan, provide Ms. Smith an additional 12 months (to October 1, 2012) to seed the approved permanent cover on a portion of the field to reduce the adverse environmental impacts to the site. An approved temporary cover, if needed, must be seeded on the acreage not planted to the approved permanent cover according to the conservation plan.

**Notes:** Determinations to permit an additional 12 months to seed the approved permanent cover shall be:

- made on a case-by-case basis
- recorded in the conservation plan.

Up to 3 years may be permitted for certain hardwood tree plantings. See Exhibit 11.
Establishing Approved Cover (Continued)

D Additional Months to Establish Permanent Covers Authorized (Continued)

*--After the conservation plan is approved, COC or CED may approve a revised plan, signed pen and ink changes by the participant, to allow up to 2 additional 12-month extensions of time to seed or install the approved permanent cover if COC or CED determines that any--* of the following applies:

- the approved grass seed, grass mixture, trees, or shrubs are not available
- seed costs will create an adverse economic hardship on the participant
- the producer has been prevented from timely seeding the approved permanent cover because of adverse weather conditions.

Notes: See paragraph 429 for modifying approved conservation plans.

Neither COC or STC may approve extensions to seed or install the approved cover beyond the 2 additional 12-month extensions provided in this subparagraph.

*--Important: In no case shall COC, CED, or STC approve a revised conservation plan--* for more than a total of 36 months, original 12 month plan, plus up to 2 additional 12-month extensions, to seed the approved permanent cover. CRP-1’s that do not have the approved permanent cover seeded in 36 months of the effective date shall be terminated. Terminate according to paragraph 573.

Meritorious requests for authority to continue CRP-1, on which the approved permanent cover has not been seeded within 36 months of the effective date of CRP-1, may only be approved by DAFP. COC and STC may submit requests *to DAFP, only if both COC or CED and STC determine the request is--* justified based on documented and verifiable facts of the individual case. All cases submitted to DAFP must include the following:

- complete explanation of how such a contract will be able to achieve the environmental benefits for which it was scored on EBI and accepted for enrollment in CRP
- copy of the participant’s request for additional time to seed the approved permanent cover
- copy of COC and STC minutes thoroughly documenting and justification supporting the request
D Additional Months to Establish Permanent Covers Authorized (Continued)

- copy of all applicable forms and documents, such as CRP-1’s, CRP-2’s, aerial photocopies, conservation plan, and job sheets

- all documentation used by COC or CED and STC during review of the subject case

- narrative of the case in chronological order.

E Temporary Covers

If the approved cover cannot be seeded within 12 months of the effective date of CRP-1, a suitable temporary cover shall be seeded according to the conservation plan. C/S for temporary cover, if needed, is authorized when COC or CED determines, based on recommendation of NRCS or TSP, that the seeding of the approved permanent cover should be delayed.

Note: Temporary cover shall be established at the participant’s own expense if C/S was declined by the participant when the offer was submitted.

Viable native or tame grass species that are currently adequately controlling erosion may be adequate temporary cover.

Note: Weeds, crop residue (unless adequate for erosion control), etc. are not acceptable as a temporary cover under any circumstance.

C/S earned shall be computed based on the average cost of carrying out the practice, as determined by COC or CED according to Part 15.
Maintaining Approved Cover

A Practice Maintenance

Fire Breaks

The NRCS State Office has provided the following guidance for the installation of firebreaks on CRP.

- It is recommended that a 20-60 foot barren firebreak be used in high-risk areas.

- A conservation plan, contract support document or similar documentation will be developed and provided to the FSA County Committee prior to installation of a firebreak. In emergency situations, such as when a fire has started, prior approval is not required.

- The conservation plan, contract support document or similar documentation will include erosion control requirements (i.e., on slopes in excess of 5 percent) and required remedial action if erosion occurs.

- Firebreaks will be outsloped with no ditches to spread any accumulated water runoff.

- Firebreaks will be water barred according to farm access road standards and the water bars outleted to established waterways or other stable drainages.

- Barren firebreaks will be managed for weed control.

- The firebreak will be maintained in a weed free, non-vegetated condition for the life of the CRP contract.
- Weed control will be accomplished with the use of appropriately labeled herbicides or light tillage.

- Firebreaks will be included as a part of the annual status review.

- Vehicular access will be controlled; the firebreak will not be used as an access road.

  Note: Use of CRP for a road is prohibited at all times.

- FSA will not provide cost share for reseeding a firebreak, if required.
A Practice Maintenance

CRP cover maintenance is the participant’s responsibility. Participants shall maintain practices, according to the conservation plan and this paragraph, without additional C/S assistance. The maximum payment rate calculation considers the cost of maintenance, if applicable, for the participant throughout the CRP-1 period.

NRCS or TSP shall work with participants to plan appropriate maintenance practices, such as mowing, spraying, or prescribed burning in a logical and practical manner. All practices necessary for the successful establishment and maintenance of the approved cover shall be included in the conservation plan and agreed to by the participant. Maintenance practices shall meet CRP and participant objectives. NRCS or TSP, in consultation with COC or CED, shall determine when maintenance practices can be rescheduled. For CRP-1’s where maintenance was not scheduled, the conservation plan shall be modified to include appropriate maintenance.

Except as provided in paragraph 492, participants shall ensure:

• that adequate approved vegetative cover is maintained to control erosion for the CRP-1 period

• compliance with State noxious weed laws, if applicable, as determined by the State or local noxious weed commission

*---Note: Neither STC nor COC or CED has the authority to determine whether a CRP participant has failed to comply with State noxious weed laws. Upon a finding of failure to comply with State noxious weed laws, by the appropriate authority, STC and COC shall assess appropriate payment reductions or terminate CRP-1, as applicable, according to paragraph 571 and 4-CP.

*--control of other weeds that are not considered noxious, as determined by COC or CED, for CRP-1’s entered into after November 28, 1990

• that undesirable vegetation, weeds (including noxious weeds), insects, rodents, etc., that pose a threat to existing cover or adversely impact other landowners in the area are controlled
A Practice Maintenance (Continued)

- after an NRCS or TSP final status review or after the CRP participant certifies completion of the practice, all CRP maintenance activity, such as mowing, burning, and spraying, is conducted outside the primary nesting or brood rearing season for wildlife and according to the conservation plan, except that spot treatment of the acreage may be allowed during the primary nesting or brood rearing season if all of the following are met:
  - if untreated, the weeds, insects, or undesirable species would adversely impact the approved cover
  - COC or CED, in consultation with NRCS or TSP, determines such activity is needed to maintain the approved cover

Note: CRP participants shall receive COC or CED approval before beginning spot treatment of acreage.

- the spot treatment is limited to the affected areas of the field.

Note: For purposes of maintenance activity, CRP participant certification of completing the practice will be considered the end of the maintenance period.

*--When spot treatment is determined necessary, COC or CED shall approve a method that results in the least damage to the nesting wildlife and habitat.

Note: Spot treatment includes spot spraying and spot mowing, and is limited to the immediate area of infestation.

Periodic mowing and mowing for cosmetic purposes is prohibited at all times, even if this activity is included in the conservation plan.

Annual mowing of CRP for generic weed control is prohibited.

Note: Beyond the primary nesting season, occasional mowing for control of weeds, insects, or pests is permissible if included in the conservation plan.
427 Maintaining Approved Cover (Continued)

A Practice Maintenance (Continued)

For Washington, the primary nesting season used for CRP administration is April 1 – July 1. After stand establishment, all cover maintenance activities shall be conducted outside of the primary nesting season. If a maintenance activity must be conducted during the primary nesting season in order to be successful, it must be approved in advance as a spot treatment. Spot treatment approvals shall be limited to the minimum acreage necessary to treat the cover.

*--Because final status reviews are completed on only a limited number of contracts, it is often unclear when a stand is officially considered established, and maintenance must be conducted outside of the primary nesting or broad rearing season. In the absence of a field visit confirming that a stand is established, counties shall assume the stand is established after no more than 3 growing seasons following seeding and inform producers that any field work conducted thereafter must be done outside the nesting season unless approved as a spot treatment. If local experience indicates stands are typically established earlier than 3 growing seasons after planting, COCs may adopt that period to assume a stand is established.--*

**Burning**

If burning will be utilized for cover maintenance, the provisions of WA Exhibit 7 shall be followed. Burning is not permitted April 1 – August 15. Burning may be permitted as a spot treatment July 1 – August 15 with the concurrence of the Washington Department of Fish and Wildlife.
A Practice Maintenance (Continued)

Participants are responsible for fire management on CRP acreage. Where appropriate, firebreaks shall be:

- included in the contract support document
- installed according to NRCS Firebreak Standard 394.

Barren firebreaks shall only be allowed in high risk areas, such as transportation corridors, rural communities, and adjacent farmsteads. The designated conservationist shall document in the contract support document that there will not be an erosion hazard from the barren firebreak. If erosion becomes a problem, remedial action shall be taken.

B Conservation Practices

Except for Christmas trees and ornamentals, CRP participants may establish other conservation practices, including alternative perennials, without C/S. The establishment of these practices shall be:

- within existing policy to comply with conservation compliance provisions
- at the participant’s own expense
- included in the approved conservation plan
- approved by the Conservation District

*--subject to COC or CED approval.--*
A Required Management

All CRP participants with contracts effective beginning with signup 26 are required to perform at least 1 management activity as part of their approved conservation plan. This management activity shall be designed to ensure plant diversity and wildlife benefits, while ensuring protection of the soil and water resources. Management activities are site specific and are used to enhance the wildlife benefits for the site. Management activities must be completed before the end of year 6 for contracts with a 10 year contract length, or before the end of year 9 for contracts with a 15 year contract length. In no case should the 1 required management activity occur during the last 3 years of the CRP contract.

Notes: Additional management activities may occur up to year:

- 8 for 10-year contracts
- 13 for 15-year contracts.

Thinning may be used as a management activity in any year provided no cost-share is paid.

Failure to perform planned management activities can result in contract violation. See paragraph 603 for noncompliance.

NRCS or TSP shall work with participants to plan appropriate management activities, such as, light disking, inter-seeding, tree thinning, and other components applicable to the practice that will create plant diversity for the benefit of wildlife and enhancement of the permanent cover.

The participant may receive up to 50 percent C/S for the management practices. See paragraph 512 and Exhibit 11 for C/S provisions.

B Voluntary Management

For all CRP-1’s before signup 26 and CRP-1’s modified to include thinning and associated forest management activities, management activities can be voluntarily performed, with C/S, if participants voluntarily request to revise the conservation plan to include management activities with the same terms and conditions as established for the required management activities.

Note: Thinning is considered a voluntary management activity on all CRP-1’s for all signups.
428 Managing Approved Cover

A Required Management

*--See WA Exhibit 5 for guidance on notifying producers of the requirement to perform mid-contract management and a list of approved cover management activities. See WA Exhibits 19 (CRP and CCRP) and 24 (CREP) for management cost share components and rates.--*

Management activities must be included in conservation plans for all contracts enrolled in signup 26 and later. This includes general CRP, continuous CRP, CREP and SAFE. Management activities must be scheduled outside the primary nesting season of April 1 – July 1 unless approved as a spot treatment in accordance with paragraph 427.

If burning will be utilized a management activity, the provisions of WA Exhibit 7 shall be followed. Burning is not permitted April 1 – August 15. Burning may be permitted as a spot treatment July 1 – August 15 with the concurrence of the Washington Department of Fish and Wildlife.

The intent of management activities is to invigorate the CRP cover. It is not intended to enhance the stand for later utilization under haying or grazing provisions.

*--In general, management activities should not be carried out on a contract more than once during the contract period unless NRCS determines there is a specific agronomic need, and very rarely more than twice.--*
C Development of Management Activities

FSA shall establish a management activity development team to develop State specific management requirements that will ensure plant diversity and wildlife benefits, while ensuring protection of the soil and water resources. The team membership shall include, but not limited to, the following:

- NRCS
- FWS
- State fish and game agencies
- State foresters
- other appropriate agencies.

The team must develop a list of management activities conforming to provisions of all practices as shown in Exhibit 11 that a CRP participant, in consultation with NRCS or TSP, may select for the enhancement of the resource. The specifications must include the following for each management activity:

- frequency of management implementation
- time period for management action
- specifications for the management actions.

Note: Management activities, with the exception of customary forest management activities, must not be performed during the primary nesting or brood rearing season.

Recommendations shall be presented to the State Technical Committee for review. The State Technical Committee recommendations must be provided to FSA STC for consideration and final determination.

D STC Approval

STC, upon recommendation of the State Technical Committee, must approve or disapprove management activities for all CRP practices, including CREP, continuous, and FWP, as appropriate. STC does not have authority to exempt practices from required management. STC’s must submit a request, with justification, to CEPD to exempt any practice from the management activity requirement.
A Allowed Modifications

A modification to an approved conservation plan must be in the best interest of CRP. Acceptable modifications are:

- adding or modifying a CRP practice
- changing CRP practices

Notes: CRP practices with lifespan requirements between 15 and 30 years may not be changed to a practice with lifespan requirements of less than 15 years.

General CRP practices may be changed only when the EBI score for the new practice is equal to or greater than the EBI score of the existing practice. See paragraph 401.

Important: When determining whether the EBI score of the new practice or practices is equal to or greater than the EBI score of the original practice or practices, COC or CED must use the same EBI criteria that was used for the original offer."

CP3 and CP3A cannot be changed to CP1 or CP2.

Changing continuous signup practices must meet needed and feasible and address the resource concern.
A Allowed Modifications (Continued)

- deleting land from CRP-1, according to paragraph 571
- scheduling reapplication of practice
- reflecting change in ownership
- implementing other noncost-shared conservation measures, if producer agrees to install according to the approved conservation plan on CRP land already seeded to an acceptable cover.

Note: Participants may establish, at their own expense, additional practices that enhance:

- erosion control
- water quality
- wildlife
- other types of cover.

Exception: Participants may be eligible for C/S to establish a permanent water source for wildlife on CP1, CP2, and CP4D.
429 Modifying Approved Conservation Plan (Continued)

B Approving Conservation Plan Modifications

*--The designated conservationist shall consult with the participant and COC or CED before preparing any modification to the conservation plan. COC or CED has final approval of all conservation plan modifications.

COC or CED shall review and approve conservation plan modifications to ensure that the--*

revised plan:

- has been signed and agreed to by:
  - all signatories to CRP-1
  - NRCS or TSP, certifying technical adequacy
  - Conservation District, if modification involves the technical aspect of the conservation plan
- includes:
  - all of the eligible acres offered for CRP
  - required maintenance for weed, insect, and pest control for the life of CRP-1
  - required management activities for each practice, as applicable
  - only practices requested on CRP-1, or otherwise required in subparagraph A
  - C/S for eligible practices only

  **Note:** See subparagraph C.

- application rates, such as the amount of seed, lime, and fertilizer, that are consistent with practice specifications.

  **Note:** Any other changes may void CRP-1.

*--COC or CED shall reject the revised plan if these requirements have not been--* satisfied.
429  Modifying Approved Conservation Plan (Continued)

B  Approving Conservation Plan Modifications (Continued)

NRCS or TSP shall revise conservation plans using any of the NRCS-approved planning forms, or when appropriate, by making pen and ink changes to:

- add, modify, or delete items
- substitute 1 practice for another to solve conservation problems
- delete land
- schedule seeding or installing of a practice
- extend CRP-1 period
- change ownership of the land
- change in the extent of performance.

Revisions to the contract support document are not needed when:

- changes take place in estimated costs
- practice installation is accomplished ahead of schedule or is delayed.

**Note:** Dates should be included in the conservation plan and approved NRCS forms.

*--NRCS or TSP shall notify FSA of these changes. If practice is delayed, COC or CED approval for an extension of time is required.

C  C/S for Changing Practices

COC or CED shall **not** approve C/S to change or add practices unless **all** of the following--* are met:

- C/S was not previously paid for the establishment of a permanent cover
- the participants have **not** started the revised practice before approval of the change
- the new practice is otherwise eligible for C/S according to Exhibit 11
- the change is an acceptable modification according to subparagraph A
- the conservation plan is modified to indicate the new practice or practices.
C/S for Changing Practices (Continued)

*--Exception:* COC or CED may approve C/S up to 50 percent of the eligible cost to change CP1, CP2, or CP10 to CP25 only if all of the following requirements are met:

- the change of practices is requested, in writing, within 3 years of CRP-1 effective date
- the participants have not started the practice before approval of the change
- the practice and approved cover type, such as grasses, legumes, forbs, trees, other vegetative cover, and water:
  - are adaptable and suitable for the site and purpose of the practice
  - will not result in an excessive cost to establish, such as using nursery stock or exotic species
- the conservation plan is modified to indicate the new practice.

**Important:** The change in practices shall not change the CRP-1 length.
D C/S Not Allowed

*--COC or CED shall not approve C/S for:--*

- plastic mulch or supplemental irrigation water, except where CP5, CP5A, CP16, CP16A, CP17, CP17A, CP22, and CP25 (only if devoted to trees) will be established in areas where the average annual precipitation is 25 inches or less

- practices tailored to specifically enhance or change the commercial production of the land

- purchasing or establishing species of grasses, legumes, forbs, trees, or other vegetative cover that are not adaptable to the area.

430 Liability to Federal Government

A Personal Liability

As determined by CCC, the person with whom costs are shared is responsible to the Federal Government for any losses the Federal Government sustains because of either of the following:

- the person infringes on the rights of others
- the person does not comply with applicable laws or regulations.
A Basic Requirements

CRP useful life easements must be maintained until easement expiration, which may be after CRP-1 expiration. If the participant fails to comply with easement provisions, including providing access to the easement area and establishing and maintaining the easement practice, COC or CED may:

• enter the property to perform necessary work
• seek specific performance
• seek any other legal action as provided by law.

*--Note: COC or CED shall seek prior approval of STC. STC shall seek RA concurrence before approving COC request.

B Limited Grazing

Limited grazing of the easement area may be allowed between CRP-1 expiration and easement expiration if grazing occurs after the producer harvests crops of the surrounding field, if this grazing is incidental.
Removing Easement

A Easement Expiration

County Offices shall compute date of easement expiration by adding the applicable number of additional easement years to the date the easement documents are filed.

Example: CRP-1 number 10 is a program year 1992 13-year contract for practice CP13B, which requires a 30-year easement. The easement documents were filed at the land records office on August 30, 1991. Although CRP-1 expires September 30, 2004, the easement will expire at 12 noon on August 30, 2021.

The landowner is responsible for removing the easement from the deed after the easement expires and written approval has been obtained from COC or CED. COC or CED shall not incur any expenses for removing the easement.

Note: Cropland shall be reclassified after CRP-1 expiration, which may be before easement expiration, according to 3-CM.

Landowners shall be notified that CRP-1 expiration does not terminate the easement on the land under CRP-1.

B Effect of CRP-1 Termination

Landowners shall be notified that CRP-1 termination does not terminate the easement on the land under CRP-1.

Reductions in payment assessed producers on CRP-1’s containing easements shall be handled in the same manner as CRP-1’s without easements, according to paragraph 571.

C Sale of Land Under Easement

The easement deed is not required to be refiled if the land under easement is sold, regardless of whether the new owner succeeds to CRP-1.

433-460 (Reserved)
**Part 14    CRP Funds**

**A Payment Limitation Attributed to Year Earned**

The maximum annual non C/S payment limitation that an eligible person or entity can receive under CRP is $50,000 per FY based on the FY the payment is **earned**.

4-PL rules defining a person or legal entity apply to CRP contracts approved on or after October 1, 2008. 1-PL rules defining a "person" apply to CRP contracts approved before October 1, 2008.

This limitation does not apply to a State, political subdivision, or agency approved under a special enhancement program. Annual rental payments made to a State under a State CRP enhancement agreement shall be credited against the payment limitation of the producer who entered into the State CRP enhancement agreement with the State.

**Important:** State CRP enhancement agreements are **not** CREP agreements.

The Finality Rule does not apply to CRP annual rental or incentive payments. See paragraph 465.

**B Calculating Maximum Annual Payment Limitations for Non-C/S Payments**

The maximum annual non-C/S share payment a person or legal may receive is equal to the lesser of:

- (annual rental payments) + (CRP-SIP’s) + (PIP’s) + applicable CREP incentive payments
- $50,000.

When the sum of the (annual rental payments) + (CRP-SIP’s) + (PIP’s) + applicable CREP incentive payments exceeds $50,000, the:

- the payment shall be reduced to $50,000
- the amount exceeding $50,000 shall never be paid.--*

**Important:** All incentive payments made by CCC under a CREP agreement shall be included when calculating the FY annual payment limitation. States with approved CREP agreements shall provide procedure for calculating applicable incentive payments and ensuring the FY annual payment limitation is not exceeded.
C Attribution of Payments to Year Earned

Payments are attributed based on the year the payment is earned.

For payment limitation purposes, a payment is attributed for:

- the annual rental payment in the FY program performance occurs
- CRP-SIP in FY COC approves CRP-1
- PIP in FY the participant completes the practice, as evidenced by the producer's signature date on AD-245.

Example 1: A producer's CRP-1 continuous contract (300 acres at $90 per acre annual payment for 10 years) is approved on September 1, 2013. The contract becomes effective on October 1, 2013. The first annual payment is due October 2014. SIP is $30,000. CRP-PIP is $40,000.

For payment limitation purposes, a payment is attributed for:

- the annual rental payment in FY 2014 (performance occurs in FY 2014)
- CRP-SIP in FY 2013 (the year the contract is approved)
- PIP in FY 2015 (assuming the practice is completed in FY 2015).

Note: This means for payment limitation purposes, the CRP-SIP is attributed to FY 2013, the first annual rental payment is attributed to FY 2014, and the CRP-PIP is attributed to FY 2015.

Note: $27,000 in annual rental payments is attributed in subsequent FY’s for the remaining 8 payments.--*
D Successor-in-Interest CRP-1’s

Following are ways payment limitation provisions apply when CRP-1 is revised because of successor-in-interest.

- The revised CRP-1 amount cannot exceed the annual contract payment CRP-1 amount.

- The annual payment on CRP-1 shall be reduced for the successor on the revised CRP-1 if the maximum payment limitation will be exceeded.

Note: CRP payments may continue to heirs of owners according to 1-PL or 4-PL as applicable. See paragraph 555 for succession-in-interest provisions.

***
A  Rounding CRP Payments

Each of the following CRP payments shall be rounded to the nearest whole dollar using normal rules of rounding:

- annual rental payments
- CRP-SIP
- PIP
- CP23 one-time WRI payment for CRP-1’s approved before November 3, 2008
- C/S payments.

B  Annual Rental Payments

Provided the participant is in compliance with the terms and conditions of CRP-1, disburse annual rental payments as designated on CRP-1.

CRP annual rental payments shall be made, when authorized:

- after:
  - certification of compliance has been received
  - certification of compliance with adjusted gross income limitation has been received according to 1-PL or 4-PL, as applicable
  - AD-1026 has been completed and signed
  - certification of compliance with 1-PL or 4-PL, as applicable, when applicable
  - October 1, for each effective year
  - receiving notice from DAFP authorizing payments to be made

Note:  CRP annual rental payments shall not be made until all eligibility determinations have been made according to 1-PL or 4-PL, as applicable.

* * *

- according to 1-FI and 1-CRP.

Note:  See paragraph 465 for finality rule.
C CRP-SIP

CRP-SIP is a one-time incentive payment made to participants that enroll certain practices under continuous signup provisions. See paragraph 197.

Provided the participant is in compliance with the terms and conditions of CRP-1, disburse CRP-SIP’s according to the shares on approved CRP-1.

CRP-SIP’s shall be made, when authorized:

- after:
  - CRP-1 is approved
  - certification of compliance with adjusted gross income limitation has been received according to 1-PL or 4-PL, as applicable
  - AD-1026 has been completed and signed
  - certification of compliance with 1-PL or 4-PL, as applicable

**Note:** CRP-SIP’s shall not be made until all eligibility determinations have been made according to 1-PL or 4-PL, as applicable.

- according to 1-FI ***.

**Note:** See paragraph 465 for finality rule.
462 Making CRP Payments (Continued)

D  PIP

PIP shall be calculated in accordance with paragraph 197.

See WA Exhibit 29 for the State PIP Advance Loan procedure.
462 Making CRP Payments (Continued)

D  PIP

PIP is a one-time incentive payment made to participants that enroll land in CRP to be devoted to continuous signup practices. See paragraph 197.

Provided the participant is in compliance with the terms and conditions of CRP-1, disburse PIP’s according to the shares on approved CRP-1.

PIP’s shall be made, when authorized:

- after:
  - CRP-1 is approved
  - certification of compliance with adjusted gross income limitation has been received according to 1-PL or 4-PL, as applicable
  - AD-1026 has been completed and signed
  - participant signs AD-245, page 2, and reports completion of practice
  - NRCS or TSP certifies performance on AD-862
  - all necessary documents to calculate total C/S amount are obtained
  - certification of compliance with 1-PL or 4-PL, as applicable
  - partial PIP’s are not authorized

  **Note:** PIP’s shall **not** be made until all eligibility determinations have been made according to 1-PL or 4-PL, as applicable.

- according to 1-FI *** ***.

  **Note:** See paragraph 465 for finality rule.
E CP23 and CP23A One-Time WRI Payment for CRP-1’s Approved Before November 3, 2008

CP23 and CP23A one-time WRI payment is an incentive payment to encourage the restoration of cropped wetlands. See Exhibit 11.

Provided the participant is in compliance with the terms and conditions of CRP-1, disburse CP23 and CP23A one-time WRI payment according to the shares on approved CRP-1 only for CRP-1’s approved before November 3, 2008.

**Exception:** Payments for CREP CRP-1 participants must adhere to the written CREP agreements. Changes made in PIP/SIP/WRI for CRP’s general and continuous signup do not automatically apply to CREP’s unless those agreements indicate that these payments shall be made “according to 2-CRP” or “consistent with National CRP directives” or similarly worded reference. CREP agreements which include specific payment provisions such as “25% WRI hydrology restoration payments shall be paid for practices CP23 and CP23A” must be adhered to as written.

CP23 and CP23A one-time WRI payment shall be made, when authorized:

- after:
  - CRP-1 is approved
  - certification of compliance with adjusted gross income limitation has been received according to 1-PL or 4-PL, as applicable
  - AD-1026 has been completed and signed
  - participant signs AD-245, page 2, and reports completion of practice
  - technical agency certifies performance on AD-862
  - all necessary documents to calculate total C/S amount are obtained
  - certification of compliance with 1-PL or 4-PL, as applicable

**Note:** CP23 and CP23A one-time WRI payments shall **not** be made until all eligibility determinations have been made according to 1-PL or 4-PL, as applicable.

- according to 1-FI ***.

**Note:** See paragraph 465 for finality rule.
Making CRP Payments (Continued)

F Prompt Payment

CRP participants who are issued CRP payments more than 30 calendar days after payments are authorized shall receive interest under the Prompt Payment Act according to 61-FI. See 50-FI for prompt payment interest rates.

463 Dividing Payments Among Participants for Successor-in-Interest CRP-1’s

A CRP Rental Payments

Earned CRP annual rental payments shall be paid according to the division of shares agreed to by the participants on CRP-1.

B Dividing CRP Payments Among Predecessor and Successor Participants

Annual rental payments shall be divided between predecessors and eligible successors as agreed to among the participants if both of the following are met:

- COC determines there is no scheme and device to defeat or circumvent the purpose of any program provision, including payment limitation and permitted entity provisions

- eligible successors-in-interest sign a revised CRP-1 within 60 calendar days of notification by COC or CED.

If there is no agreement among predecessors and eligible successors, annual rental payments shall be divided based on the earlier of the date the:

- deed is recorded on the land records

- successor acquired right of occupancy, through foreclosure proceedings, of the land under CRP-1.

Note: This provision only applies to land acquired through foreclosure proceedings. See paragraph 555 for succession-in-interest provisions.
B CRP Rental Payments for Succession-in-Interest (Continued)

CRP participants shall be responsible for either:

- refunding any payments that may become due if CRP-1 is not assumed
- ensuring that the successor-in-interest agrees to and signs, if applicable, the version of CRP-1 Appendix in effect when the preceding CRP-1 was signed.

If acreage under CRP-1 is sold to a successor and the successor sells the acreage before the County Office becomes aware of the initial sale, the newest owner may be allowed to succeed to CRP-1.

**Note:** If the original owner received payments earned after the sale of the land, refunds of that amount, plus interest, shall be collected from the original owner. Issue applicable payments to new owner.

If a successor terminates CRP-1 and the predecessor has earned part of the annual rental payment, the successor shall be responsible for refunds, including the amount earned by the predecessor.

**Note:** Ensure that the payment is issued to the predecessor even though CRP-1 is terminated. No interest will be paid.

When dividing CRP annual rental payments between previous owners and new owners, select all participants for special payment processing according to 1-CRP, paragraph 355.
A Forms to Use

Record payments according to the following.

<table>
<thead>
<tr>
<th>Form</th>
<th>Payment</th>
</tr>
</thead>
<tbody>
<tr>
<td>AD-245</td>
<td>Record C/S payments.</td>
</tr>
<tr>
<td>FSA-695</td>
<td>Record annual rental payments.</td>
</tr>
<tr>
<td></td>
<td>• See Exhibit 36</td>
</tr>
<tr>
<td></td>
<td>• File FSA-695 according to 25-AS.</td>
</tr>
</tbody>
</table>

**Note:** Using FSA-695 is optional.

See 1-FI for signature, mailing, and filing requirements for Disbursement Transaction Statements.
A Preparing Payments

Use the following handbooks and procedures to process refunds, offsets, assignments, and joint payments:

- for refunds, see 3-FI
- for offsets, see 1-FI and 6-FI
- for receivables, see 64-FI
- for claims, see 58-FI and 64-FI
- for assignments:
  - prepare CCC-36 according to 63-FI
  - assign only cash payments
- for joint payments, prepare CCC-37 according to 63-FI.

B Finality Rule

The Finality Rule does not apply to any of the following CRP payments:

- annual rental payments
- CRP-SIP’s
- PIP’s
- CP23 and CP23A one-time incentive payments for CRP-1’s approved before November 3, 2008.

C Assigning CRP Cash Payments

CRP cash payments may be assigned to secure or pay pre-existing debts.

Prepare CCC-36 and determine priority for honoring assignments according to 63-FI.
Nonresident Alien Income Tax

A Withholding Nonresident Alien Income Tax

If nonresident alien income tax is to be withheld:

- see 62-FI
- prepare and distribute IRS-1042 and IRS-1042S.

Debts and Collections

A CCC Receivables

Debts arising under CRP become CCC receivables and receipts.

B Late Payment Interest

These debts are subject to late payment interest charges. See 58-FI.
A Preparing FSA-325

If a participant has earned a payment, including a C/S payment, but is dead, missing, or incompetent, prepare FSA-325 according to 1-FI and 1-CM.

Payment shall be made to the representative of the participant according to FSA-325.

When CRP-1 is terminated, the deceased, missing, or incompetent shall earn payment through the date of death, loss, or declaration of incompetency.

B Who Succeeds to CRP-1

For CRP purposes, the administrator of an estate or heirs of the deceased have the following choices:

- agree to become successor-in-interest to CRP-1
- refuse to become successor-in-interest. COC shall terminate CRP-1 according to paragraph 571

Note: Operator may only be replaced if the operator or tenant voluntarily relinquishes his or her rights, in writing, or is no longer considered an eligible participant. See paragraph 546.
469 Charging Interest

A Interest on Refunds

Use the rate of interest CCC is required to pay for borrowing from the Department of the Treasury on the date payment was issued. See 50-FI.

* * *

B Date Interest Accrues

Interest accrues from the date of disbursement to the earlier of the following:

- date of repayment
- date of first delinquency letter.

Note: See 58-FI for an example of a delinquency letter.

C Establishing Receivables

Establish a receivable according to 58-FI.

470 Effects of CRP Annual Payment on Earned Income

A Not Advising About Earned Income

County Offices shall not advise CRP participants on whether CRP payments should be considered as “earned income” for IRS and Social Security purposes.

B Referring Participants to Tax Consultant or SSA

County Offices shall refer CRP participants to their tax consultant or SSA for determinations about CRP annual payments as earned income.

471-490 (Reserved)
491 General C/S Policy

B C/S Level

See WA Exhibit 19 for CRP, CCRP and SAFE cost share policies, components and rates.

See WA Exhibit 24 for CREP cost share policies, components and rates.

COC’s shall use the STC’s cost share rates provided in WA Exhibits 19 and 24.

For CREP, CCC cost shares will equal the normal 50 percent of the eligible costs for establishing the approved practice. Washington State cost shares will equal 10 percent of the eligible costs for establishing approved CREP practices. The cost share rates and types (percent of cost or flat rate) will be based on the current rates listed in WA Exhibit 24 at the time the contract is approved.

Note: Under no circumstances may the total cost share amount received by the participant(s), from all sources, exceed 100 percent of the cost of the practice.
A Participants Eligible for C/S Payments

CRP C/S shall be paid only to participants who:

- are a signatory to CRP-1
- established the conservation practice.

See paragraph 519.

Note: Authorized payments may be assigned by the participants.

B C/S Level

Participants who elect to receive other Federal C/S assistance are obligated to refund CRP C/S payments, plus interest.

C/S assistance shall not exceed 50 percent of the eligible costs of establishing the approved practice. Participants may receive C/S assistance from non-Federal sources; however, under no circumstances may the total C/S amount received exceed 100 percent of the cost of the practice.

C/S assistance to establish permanent vegetative cover on CRP land for the sum of the acres for CP1, CP2, CP3, CP3A, CP4B, CP4D, CP18B, and CP18C divided by the acres in CRP-1, shall not exceed 50 percent of the price per acre at which the land placed in CRP could be sold for use as farmland at the time at which CRP-1 is signed by the producer.

Exception: Acreage devoted to CP1 for development of a permanent water source for wildlife implemented on acreage offered as CP10 before March 14, 2011.

See Exhibit 11, page 39.

Use the most recent NASS survey.
C C/S Funds Authorized on CRP Acres

Acreage on which CRP C/S has been paid is not eligible for other Federal C/S during the term of the CRP contract unless approved by DAFP. This does not apply to Federal funding that is not Federal C/S funding. Requests shall be submitted to DAFP on a case-by-case basis for only the most highly meritorious cases as determined by STC.

Example: A participant with an approved contract receives assistance other than cash from FWS Partners for Wildlife program. These services are not considered C/S assistance. FWS provides the participant documentation indicating the value of their service is $2,500. The participant also receives C/S equaling $1,500 from a private conservation organization. The participant has other expenses related to the practice that are eligible for C/S, according to Exhibit 11, and equal to $6,000. Since the participant did not receive C/S from FWS, the participant may receive CRP C/S assistance.

The total practice establishment cost, considering all contributions, is $10,000. The participant may receive $5,000 in C/S assistance from FSA because this amount is less than the participant’s out-of-pocket costs.

Note: Participants who receive ECP payments during the term of the CRP contract on the same land for which they received CRP C/S payments are ineligible to retain CRP C/S unless approved by DAFP on a case-by-case basis. Approval of ECP funds by DAFP does not automatically waive this requirement. Restoration of re-enrolled CRP acreage where no C/S was paid under the existing contract should be C/S’d under CRP.

***

CRP participants may receive C/S funding from non-Federal sources to install conservation practices on CRP acreage. See paragraph 517.

Note: Practices shall only be approved if they are according to an approved conservation plan on CRP acreage.

D C/S Not Authorized

C/S is not authorized for:

- hand-collected seed, except when producer provides verification of PLS factor, germination, quality of seed, amount planted, and types and varieties of seed and seed mixtures
- acreage not under CRP-1
The STC has established the following policy for cost sharing on tree shelters, netting, plastic tubes or other animal damage control devices, where Exhibit 11 indicates cost sharing is only authorized as determined by the STC. This applies to the CP22, CP23, CP23A, CP25, CP27, CP28, CP30 and CP38 practices.

Cost sharing for animal damage control devices is only authorized when the both the following apply:

- the designated technical agency determines that the devices are needed for successful establishment of the trees/shrubs on the specific site
- the device required, rather than over-planting or another type of device, is the most cost-effective method of stand establishment.

**Note:** Cost sharing under this policy is authorized for hardwoods, conifers and shrubs.
D C/S Not Authorized (Continued)

- streambank stabilization

- CP12

*--CP11, except for tree thinning within open areas for contracts approved before March 14, 2011--*

**Note:** See Exhibit 11

- splitting practices on the same land for C/S purposes between different Federal programs

- establishing required practice on CRP if any other Federal C/S has been, or is being, made to establish that practice

- drilling wells

**Exception:** C/S may be authorized for establishing drilled wells on filterstrips and riparian buffers, if needed.

- developing water facilities

**Exceptions:** C/S may be authorized for establishing:

- livestock water facilities outside filterstrips and riparian buffers, if needed

  **Note:** See paragraph 511

- a permanent water source for wildlife, when developed on certain acreage enrolled in CRP and according to a conservation plan. See Exhibit 11

- installing irrigation systems

- improving or reorganizing existing irrigation systems

- purchasing and planting vegetative cover for certain practices exceeding 50 percent of the agricultural market value of the land

**Note:** See subparagraph B.
D  C/S Not Authorized (Continued)

• fencing CRP land

  **Exception:** C/S may be authorized for fencing around filterstrips and riparian buffers.

• re-establishing practice because of damage from emergency haying or grazing

• establishing practices for unacceptable offers

• practice not meeting specifications

• practices not included in the approved conservation plan

• plastic mulch or supplemental irrigation water, except where CP5, CP5A, CP16, CP16A, CP17, CP17A, CP22, and CP25 (only if devoted to trees) will be established in areas where the average annual precipitation is 25 inches or less

• tree shelters, netting, plastic tubes, or other animal damage control devices, except in *—areas designated by STC for use only on CP3A, CP5A, CP16A, CP22, CP23, CP27, CP28, CP30, CP39, CP40, or CP41--*

  **Notes:** C/S is not approved for such devices for other practices.

  See paragraph 31 and Exhibit 11

• re-enrolled practices.

  **Exception:** C/S is authorized **only** if additional work/activity is required for the practice to meet current practice standards according to paragraph 366 and Exhibit 11. C/S is **not** otherwise authorized for re-enrollments.
Example: Expiring CRP-1 with practice CP8A is re-offered as practice CP8A. A site visit reveals CRP-1 is in compliance according to contractual requirements. NRCS or TSP noted that normal degradation has occurred that requires grading and shaping and subsequent re-seeding to meet current CP8A standards with a total estimated cost of $2,000. COC or CED may approve CRP-1 and 50 percent eligible C/S of approximately $1,000 according to procedure.

Example: Producer re-offers expiring acreage as a continuous signup practice. The practice is in compliance and is determined as meeting current practice standards. The producer requests to revise the conservation plan and add a 5 species seeding mix as an interseeding or re-seeding to provide enhanced wildlife habitat benefits. COC or CED may approve CRP-1 and conservation plan; however, since the existing practice and vegetative cover meets procedural standards, COC or CED shall not approve CRP-1 that includes C/S.
A Authorizing C/S

C/S may be authorized for 1 weed and/or insect control application if:

• *--COC or CED determines it is necessary for successful establishment of the cover and--* it is included as part of the approved conservation plan

• it is applied within the first 12 months after planting or seeding the cover

Exception: See subparagraph B.

• it will not disturb the cover during the primary nesting or brood rearing season.

Note: This is in addition to any application that may have been applied when the cover was initially installed.

B Exceptions to Establishment Period for CRP-1’s

Participants who plant CP3, CP3A, CP4B, CP4D, CP5A, CP16A, CP17A, CP22, CP23, CP25, CP27, or CP28 devoted to tree plantings, on acres offered may receive C/S:

• for 1 weed and/or insect control application
• within 24 months after the planting
• if:

  • *--COC or CED determines it is necessary for successful establishment of the cover--*
  • it was included as part of the approved conservation plan
  • it will not disturb the cover during the primary nesting or brood rearing season.

Example 1: Producer planted 10 acres of CP3, Tree Planting. The conservation plan required a chemical site preparation, pre-application herbicide, and a post-emergence weed control to be applied within 12 months of planting. C/S for the post-emergence weed control is eligible.

Example 2: Producer planted 10 acres of CP3, Tree Planting. The conservation plan required a chemical site preparation, pre-application herbicide, and a post-emergence weed control to be applied within 12 months of planting. C/S for the post-emergence weed control is eligible. Eighteen months after planting, NRCS or TSP recommended an additional post-emergence weed control be performed. The additional weed control measures are not eligible for C/S since the producer has received C/S for a post-emergence weed control. The additional weed control measure is considered maintenance.
C/S for Post-Emergence Weed and Insect Control

A Authorizing C/S

Based on guidance received from the National Office, and the “Note” in National subparagraph A, cost sharing for post-plant weed control operations may be authorized once at or shortly after planting, and once again, no later than 12 months after planting or seeding the cover. Cost sharing can never be authorized for more than two post-planting weed control operations.

Examples: Producer A applies a pre-emergence herbicide shortly after seeding. He applies a post-emergence herbicide several months after seeding. Cost sharing could be authorized for both applications.

Producer B mows her CRP stand, after seeding, as soon as the weeds are large enough for mowing to be effective. She applies a post-emergence herbicide several months later, but before 12 months after seeding. Cost sharing could be authorized for both operations.

Producer C mows his CRP stand, after seeding, as soon as the weeds are large enough for mowing to be effective. He applies a post-emergence herbicide 15 months after seeding. Cost sharing can only be authorized for the mowing. Cost sharing cannot be authorized for post-emergence weed control operations more than 12 months after seeding.

Producer D applies a pre-emergence herbicide shortly after seeding, and two post-emergence herbicide applications within 12 months of seeding. Cost sharing can be approved for the pre-emergence herbicide and the first post-emergence herbicide. Cost sharing cannot be authorized for the second post-emergence herbicide application because cost sharing can never be paid on more than two weed control operations after seeding.

Note: For the practices listed in subparagraph B, the limitation changes from 12 months to 24 months after planting. The limitation on the number of cost shareable operations does not change.
A When to Start CRP Practice

Producers shall be advised that:

- approved CRP practices may be started:
  - after submitting the offer to the County Office
  - when notified that CRP-1 has been approved

- starting a practice before final approval of CRP-1 is at the producer’s own risk

- where practical State-certified seed shall be used for CRP

  **Note:** However, common seeds, especially for natives, may be used when certified seed is **not** available.

- C/S payments are ineligible if:

  - offer is not accepted
  - designated acres are ineligible
  - practice does not meet specifications
  - practice is not included in the approved conservation plan.

  **Note:** See paragraph 429 for C/S when modifying approved conservation plan.

B C/S for Re-Establishment

If the practice failed because of a natural disaster or through no fault of the participants, COC shall evaluate the site to determine both of the following:

- the purpose of the practice is being met

- remaining cover provides the same environmental benefits as the original cover, which includes:

  - water quality benefits
  - wildlife habitat benefits
  - erosion control.

If both criteria are met, COC shall not authorize C/S for re-establishment.
If both criteria are not being met, COC shall determine whether the cost of restoring the approved cover outweighs the benefits that would be received from the restoration. COC’s shall, at a minimum, consider all of the following:

- cost of restoring cover
- length of time needed to restore the cover
- benefits received from restored cover
- years remaining before CRP-1 expires
- type of cover to be restored.

If the cost of restoring the approved cover outweighs the benefits that would be received from the restoration, COC shall terminate CRP-1. See paragraph 571.

If the benefits that would be received from the restoration outweighs the cost of restoring the approved cover, COC shall authorize eligible C/S for:

- re-establishing the approved cover
- temporary cover, if needed
- dead litter crop, if needed.

Note: For land devoted to CP3 or CP3A for which the participant received C/S or an easement practice, additional C/S shall be authorized.

C C/S for Dry Litter Crops

CRP participants may receive C/S for dry litter crops needed to establish vegetative cover if the crops are:

- not grazed or harvested
- not included in practice specifications developed by COC or CED--*
- included in the approved conservation plan.
B C/S for Re-Establishment (Continued)

PIP payments are one-time payments, and are not available for re-establishment costs.

For CREP, if the COC determines a participant is eligible for CCC cost share for re-establishment in accordance with this paragraph, they will also be eligible for State cost share for re-establishment, dependent on the availability of State funds.

For CREP, Washington State annual maintenance payments will be issued for the amount of re-establishment costs for failed vegetation, fences, livestock water and livestock crossings, not covered by a PIP, if re-establishment occurs within the first 5 years after stand establishment. In this case, the maintenance payment will be calculated the same as a PIP payment would be, dependent on the availability of State funds. See paragraphs 196 and 197.
A Eligible Items

Items eligible to establish C/S rates include the cost of any direct and significant factors necessary to perform the practice, such as:

- equipment
- new or used materials
- services
- labor
- sales tax.

B Estimated Costs

Estimated costs of eligible items may be based on:

- STC, COC, or CED, as applicable, knowledge and judgment of anticipated costs
- current cost data from:
  - application for payment
  - vendor and dealer cost quotations or advertised prices
  - estimates from COC, NRCS, FS, and other agencies

Note: Keep copy of estimates.

- other available sources.
Establishing C/S Rates (Continued)

C  Ineligible Items

The cost of the following items are ineligible for establishing C/S rates:

- engineering charges, consultant fees, permit fees, or archeological surveys

  Note: Archeological surveys will be paid for by CCC according to 1-EQ.

- providing land

- other C/S payments

- right to use water

- incentives

- power sources, including but not limited to electrical or solar fence charges and obtaining utility service generator

- portable equipment

- donated material

- meeting supplemental requirements, such as abstaining from harvesting

- loss of or reduction in revenue from the land

- cost of pumps and pumping accessories, except for permanently installed pumps that are needed as an integral part of the practice.

  Note: One or more of these items may be required to make the practice serve its purpose, but these items may not be used to establish C/S rates.

D  Arbitrary Holddowns

*--STC, COC, and CED shall ensure that arbitrary holddowns are not used when establishing--*
C/S rates and limitations.
Establishing C/S Rates (Continued)

E Flat Rates

Flat C/S rates may be established:

- to simplify administration
- to provide a firm, predetermined commitment to applicants
- when documented costs are relatively uniform
- to provide incentive to producers to obtain the best price available.

Note: See paragraphs 495 and 497
A Overview

STC’s are authorized to develop a State program and C/S policy based on guidelines established in this handbook, in consultation with the State Technical Committee.

B State Practice Requirements and Specifications

The State CRP practice requirements and specifications shall:

- be incorporated by reference to a standard publication
- be included in the State program
- not be less restrictive than National policy and be incorporated in a State amendment according to 1-AS
- not require performance beyond that which is needed to ensure that the practice functions properly.

Maximum and minimum specifications shall be included only if practice is included in the State program.

C Additional Requirements

STC, in consultation with the State Technical Committee, is responsible for developing additional CRP practice requirements and specifications to ensure that natural resource problems are solved.

D Materials and Standards

The standards for materials or services to perform CRP practices shall be included or referred to in the cover practice writeup.
E Establishing Rates for State CRP

STC’s that establish C/S rates for the State shall establish rates within the National C/S levels, expressed as either a:

- flat rate
- percent of cost, not to exceed $ ___ per unit of measure
- percent of cost.

Notes: Base flat rate or limitations on documented average costs.

Do not use arbitrary holddowns.

Use percent of cost levels only if there is no data or there is considerable variation in actual cost of practices across the State.

F Reviewing and Approving County C/S Rates

STC’s that do not establish C/S rates for the State may authorize COC’s to establish C/S rates for the county.

STC shall establish State guidelines for COC’s to follow when establishing county C/S rates.

STC, or representative, shall review and approve all C/S rates established by COC to ensure that:

- C/S rates are consistent across county boundaries
- C/S rates are consistent across district and State boundaries

Important: State Office shall not delegate this responsibility.

- C/S rates established are within the National and State C/S levels, if applicable
- all flat C/S rates established represent the applicable percentage of cost specified
- cost estimates used by COC’s to establish flat C/S rates are accurate and acceptable
- C/S rates are set at the minimum incentive needed to encourage producer participation and implement the approved practice.
496 Establishing Standardized Components

A State-Developed Components

State Offices shall establish and maintain a list of standardized components applicable for practices under CRP to be used within the State.

- Components shall represent different items that are required as part of a practice.

  Examples: Materials, seed types, seed mixtures, tree types, labor, etc.

- The State Office shall develop the coding system. See subparagraph B.

Note: Components shall be established in the automated system according to 1-CONSV, Part 2.
Establishing Standardized Components (Continued)

B Coding System

State Offices may use 1 of the following options to develop standardized components.

**Note:** State Offices may establish a different method of developing standardized components if the results are the same as either of the following options.

### Option 1
Develop a coding system that will provide County Offices with a structured system that allows an additional character to be added for specific County Office components associated to the State-developed component.

<table>
<thead>
<tr>
<th>Office Level</th>
<th>Example of Standardized Component</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example of State component</td>
<td>EW Earthwork</td>
</tr>
</tbody>
</table>
| Example of County Office-specific components | EW1 Earthwork - Heavy Equipment  
| | EW2 Earthwork - Light Equipment |

### Option 2
Develop a coding system that will provide for every component needed for the State. County Offices will not be able to add characters to the State-developed codes.

<table>
<thead>
<tr>
<th>Office Level</th>
<th>Example of Standardized Component</th>
</tr>
</thead>
</table>
| Example of State-developed components | TC1 Temp Cover Tractor/Drill  
| | TC2 Temp Cover Seedbed Prep/Tractor/Drill  
| | TC3 Temp Cover Disc/Seedbed Prep/Tractor/Drill |
| Example of County Office-specific components | With this option, the County Office shall:  
| | • not develop County-specific components  
| | • use the State-developed components that apply to the county. |
A Establishing Rates

COC’s are authorized to establish county C/S rates:

- if authorized by STC
- according to State and National guidelines
- with NRCS concurrence.

COC’s that establish C/S rates for the county shall establish rates within the State and National C/S levels, expressed as 1 of the following:

- flat rate
- percent of cost, not to exceed $ ___ per unit of measure
- percent of cost.

B County Practice Requirements and Specifications

COC shall include all CRP practice provisions, requirements, and specifications issued in the State program.

The County CRP practice requirements and specifications shall:

- be incorporated by reference to a standard publication
- not be less restrictive than State or National policy
- not require performance beyond that which is needed to ensure that the practice functions properly
- be recorded in a County Office handbook or in some other manner

Note: Include the following information:

- list of practices
- approved C/S rates
- reference to the general provisions in the State guidelines.

- not be effective until approved by STC according to subparagraph C.

Maximum and minimum specifications shall be included only if practice is included in the County program.
C STC Approval

STC, or designee, shall ensure that the requirements, specifications, and C/S rates established by COC are consistent across county boundaries before approval.

STC shall ensure that all C/S rates established by COC are consistent across district and State boundaries.

Important: STC shall not delegate this responsibility.

D Establishing Flat C/S Rates

Flat C/S rates established by COC shall apply to the entire county. Variations of flat C/S rates within a county are not authorized.

Express flat C/S rates as follows:

• $ ____ per acre
• other unit of measure, such as cubic yard, linear foot, ton, or pound.

Note: Base flat rates or limitations on documented average costs. Do not use arbitrary holddowns. Use percent of cost levels only if there is no data or there is considerable variation in actual cost of practices across the county.

E Supporting Data for Flat C/S Rates

COC shall:

• use existing FSA and NRCS average cost lists as supporting data to establish flat C/S rates
• if average C/S rates are not established, base flat rates on current data from:

  • NASS
  • *--NIFA through the State Extension service--*
  • applications for payment
  • quotations from dealers or contractors
  • other available sources.
E  Supporting Data for Flat C/S Rates (Continued)

File the cost data used to establish flat rates with the County eligibility status list.

Note: Supporting evidence and proof of payment for completed practices paid on a flat rate method are not required to be maintained by the producer for 1 year.

F  Adjusting Previously Established Flat C/S Rates and Documentation

COC’s shall not increase or reduce flat C/S rates or limitations based on isolated changes in costs during the FY.

If the average cost of performance:

- changes substantially during FY, COC’s shall revise the rate
- decreases so the rate is materially greater than the established State or National level, COC’s shall reduce the rate.

COC’s shall:

- document the reason or basis for any changes to C/S rates in COC minutes
- amend county CRP C/S data indicating the revised rates.

C/S earned shall be computed based on the average cost of carrying out the practice, as determined by COC using rates in effect when C/S is approved on AD-245.

Exception: When the average cost of performance changes substantially for reasons beyond the producer’s control, COC or CED may compute C/S based on the average cost of carrying out the practice using the rates in effect when the practice is performed. These exceptions shall be documented in COC minutes.

Note: AD-245, page 2, shall not be approved until CRP-1 is approved.
G Percentage-of-Cost Not to Exceed C/S Rates

COC may use percentage-of-cost not to exceed $____ per unit of measure C/S rates if either of the following applies:

- there is no available cost data
- there is a considerable variation in the actual cost of performing a practice.

Express percentage-of-cost C/S rates as “____ percent of cost, not to exceed $____ per unit of measure”. Base the limitation on the average cost of performing the unit of measure.

File the cost data used to establish percent-of-cost not to exceed $____ per unit of measure rates with the County eligibility status list.

*--COC or CED shall inform the producer that supporting evidence and proof of payment for--* completed practices paid on a percent of cost not to exceed method must be:

- maintained for 1 year after the end of FY in which the practice is completed
- presented within 30 calendar days to the County Office if selected for spot check.
H Percent-of-Cost C/S Rates

COC may use percent-of-cost C/S rates if either of the following applies:

- there is no available data
- there is a considerable variation in the actual cost of performing a practice.

Express percent-of-cost C/S rates as “____ percent-of-cost per unit of measure”.

File the cost data used to establish percent-of-cost rates with the County Office eligibility status list.

*--COC or CED shall inform the producer that supporting evidence or proof of payment for--* completed practices paid on a percent-of-cost method must be:

- maintained for 1 year after the end of FY in which the practice is completed
- presented within 30 calendar days to the County Office if selected for spot check.
I Acceptable Evidence

*--COC or CED shall obtain evidence to determine proper payment to eligible participants.--*
This may include, but is not limited to:

- invoices
- canceled checks
- receipts
- analysis tags
- other acceptable evidence to determine payment.

**Note:** Evidence must be obtained regardless of whether flat rates or percent-of-cost method was used to determine the C/S payment.

See paragraph:

- 519 for making C/S payments
- 513 for supporting evidence.

J Spot Check of Support Data and Proof of Payment

*--COC or CED shall randomly spot-check a minimum of 5 percent of the participants--*
whose C/S payments for completed practices were made in the previous FY and whose payments, in total or in part, were determined by the percent of cost method. C/S payments computed solely on a flat-rate basis shall not be subject to this provision.
A Changes in Practices

*--For county CRP changes, COC or CED shall:--*

- develop County CRP amendments
- submit the amendments to STC for review and approval.

*--NRCS, NIFA, through the State Extension service, and FS, through the State Forestry--*

agency, must approve technical changes.

Send questionable cases to STC. STC shall contact other agencies to help resolve the issue.

B Effective Date of Changes

A CRP amendment that changes C/S rates or specifications shall specify the effective date, which shall not be retroactive.

**Exception:** When the average cost of performance changes substantially for reasons *--beyond the producer’s control, COC or CED may compute C/S based on--*

the average cost of carrying out the practice using the rates in effect when the practice is performed. These exceptions shall be documented in COC minutes.

Rates and specifications in effect before an amendment’s effective date shall remain in effect for C/S approvals issued before that date.

Use the revised rates and specifications for all approvals issued on or after the amendment’s effective date.
C  Processing Instructions

*--For CREP, form FSA-848B, Page 3, shall be used by FSA to report the following to Conservation Districts:

- amount of the participant’s State 10 percent cost share payment
- payments due producers under State maintenance payments for re-establishment
- State PIP Advance Loan amounts.

Report “WA State C/S” and “PIP Loan” amounts above item 18D, Current Amount Earned, on Page 3 of the FSA-848B.

Note: See paragraph 196 and WA Exhibit 25--*
A Approval

When CRP-1 is approved, the practices scheduled on the approved conservation plan are automatically approved.

*--By approving CRP-1, COC or CED is committing funds for completing the practices.--*

B Issuing AD-245

Process initial AD-245 for all practices, C/S, non-C/S, and management activities, immediately after approving CRP-1.

Issue AD-245, page 2 for all practices on CRP-1 immediately after receiving AD-862 information from NRCS or TSP. See paragraphs 500 and 501.

AD-245 and AD-862 shall serve as a:

- reminder of approval
- report of performance
- claim for payment.

C Processing Instruction

Process AD-245 according to 1-CONSV.

Note: AD-245, page 2, shall not be approved before CRP-1 is approved.
Completing and Referring AD-862

A Implementing Procedure

After approving CRP-1’s, the applicable agency shall complete the following steps.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>FSA enters information and prints AD-862 according to 1-CONSV.</td>
</tr>
<tr>
<td>2</td>
<td>FSA refers AD-862 to NRCS or TSP according to paragraph 508 and 1-CONSV. Include all practices for CRP-1. <em>--Example:  CP2 and CP12.--</em></td>
</tr>
<tr>
<td>3</td>
<td>Applicable technical agency completes required AD-862 information and returns to FSA.</td>
</tr>
<tr>
<td>4</td>
<td>FSA completes AD-862 according to 1-CONSV.</td>
</tr>
</tbody>
</table>

Note: Manual AD-862’s are not authorized.

Notifying Applicant of C/S Approval

A Notifying Producers

Notify the producer of the practice extent and approved C/S according to 1-CONSV, paragraph 165.

Note: AD-245, page 1 may be printed and maintained on file. If AD-245, page 1 is printed, County Offices may request the producer’s signature; however, the producer’s signature is not required.
A Extension of Time

*--COC or CED may extend the time to complete a practice, not to exceed 12 months after the completion date in the approved conservation plan, if the extension is requested before the practice approval expires. See paragraph 426 for COC or CED authority for extensions of--*

B Expiration Notice

Prepare a computer-generated List of AD-245’s Expiring in 30 Days every 30 calendar days to keep track of approvals that need to be completed within a 30-day period.

Mail all participants on the list an expiration notice.

Note: See 1-CONSV, paragraphs 292 and 328.

C Justifying Extensions

An extension of time may be based on NRCS’ or TSP’s advice that the practice is being or will be performed in a timely manner.

*--COC or CED shall limit the extension to the minimum time necessary to complete the--*

D Documenting Extensions in COC Minutes

Document extensions of time individually in COC minutes and, at a minimum, include the following:

- producer or agent
- FSN or control number
- practice
- reason for extension.

E Notification of Extension

*--COC or CED shall notify the producer in writing whether an extension has been authorized. If an extension is authorized, COC or CED shall also notify the producer of the new--*

practice expiration date.
A Canceling Approved AD-245

Cancel an approved AD-245 when the performance report is not filed by the expiration date.

*--When AD-245 is canceled, COC or CED shall:--*

- notify NRCS or TSP
- document the action taken on AD-245
- notify the participant of the action taken, including possible termination of CRP-1

**Note:** Failure to complete the practice shall result in termination of CRP-1.

- document the cancellation in COC minutes.

B Suspending Cancellation

If a performance report on AD-245, page 2, is not filed timely, cancellation may be suspended if the County Office is aware that the practice was performed in a timely manner.

- Certification of performance on AD-862 and personal knowledge of a committee member or County Office employee are acceptable reasons for suspending cancellations.

- Take immediate action to obtain the performance report.

**Note:** If the performance report from the producer is not obtained within 30 calendar days, cancel the approval.
A Conditions to Reinstate Canceled Approvals

*--COC or CED may reinstate a canceled practice approval when all of these conditions apply:

- the participant requests reinstatement
- the practice was started before cancellation
- the practice was or will be completed within a time prescribed by COC or CED.--*

**Important:** Replacement AD-245 and AD-862 will need to be created in the automated system, because once canceled, they cannot be reinstated for long-term programs.
A Who May File

Any eligible “person” according to 1-PL or person or legal entity according to 4-PL who paid a part of the cost of a completed practice and is signatory on CRP-1, may sign and date the performance report. See 1-CM for provisions applying to minors and dead, missing, or incompetent persons.

B Performance Reports

To be eligible for C/S payments, “persons” according to 1-PL or person or legal entity according to 4-PL who perform approved practices must report performance on AD-245, page 2, and provide any required supporting data by the practice completion date.

If the practice or component is not completed, the producer shall not sign AD-245, page 2. County Offices shall date stamp reports when received.
A Final Date to Report Performance

Performance **must** be reported on or before the expiration date or by the authorized extension *--date granted by COC or CED. See paragraph 502.--*

B Filing in Timely Manner

AD-245, page 2, is filed in a timely manner when it is delivered to the County Office or is postmarked on or before the expiration date.

C Not Filing in Timely Manner

For reports not filed in a timely manner enter either of the following on AD-245, page 2:

- date received and initial the entry
- postmarked date and initial the entry.

Cancel AD-245 and notify the participant with appeal rights.

**Note:** A replacement AD-245 shall be created for AD-245 that was canceled because the performance report was not filed in a timely manner, if provisions in paragraph 503 are satisfied.
A Reporting Completion

On AD-245, page 2, participants shall:

- report completion of practice by entering “Yes” in column G
- complete “Instructions to Participant”, item X.

Notes: See 1-CONSV, Exhibit 4.

Participants shall not complete “Instructions to Participant”, item Y if multiple persons shared in the cost of the practice. See subparagraph B.

County Offices shall not process AD-245 until all information is submitted.

On, AD-862, for practice performance not certified by NRCS, FS, or TSP, producers shall self-certify practice performance.

County Offices shall determine that the practice meets needs and feasibility based on the approved conservation plan developed by NCRS or TSP and approved by the conservation district.

B Multiple Contributors

If multiple persons shared in the cost of the practice, the participant shall include on AD-245 or attachment a list of names of all persons who shared in the cost of the practice and the extent of their contributions. The list shall include all ineligible persons, State, or Federal agencies.

A “person” who is fully compensated or reimbursed for materials, equipment, services, or labor is not a contributor.

*--COC or CED may consider all available information to determine the eligibility of other--*

contributors.

If more than 1 person contributed to a practice, determine whether:

- all contributors qualify as separate “persons” according to 1-PL or person or legal entity according to 4-PL or should be considered 1 “person” according to 1-PL or a person or legal entity according to 4-PL
- each eligible contributor is eligible to receive C/S.
A Technical Agency Certification

The technical agency’s certification on up to 10 percent of AD-862’s is required.

County Offices shall:

- determine the total number of practices that must be certified by NRCS based on the total number of practices on CRP-1’s approved in the previous FY
- notify the technical agency when AD-245, page 2, is filed by the participant
- provide aerial photography and current slides, if available, to TSP for its use in determining acreage performed
- not inspect any practice for verification
- accept the technical agency certification of the extent performed for approving payments to participants.

B Priority Practice Selection

Certain practices have greater technical complexity. These practices shall have priority when selecting the 10 percent of practice certifications completed by NRCS. For the following practices, NRCS or TSP, as applicable, shall certify practice performance on AD-862, up to 10 percent, before certifying practice performance for any other CRP practices:

- CP8A
- CP9
- CP18B
- CP18C
- CP21, when a structure, water facility, water development, or pipeline is included
- CP22, when a structure, water facility, water development, or pipeline is included
- CP23
- CP23A
- CP26
- CP27
- CP28
A Technical Agency Certification

*--NRCS or TSP is required to certify practice installation on up to 10% of the FSA-848Bs submitted by participants. The number of FSA-848Bs NRCS/TSP should check equals 10% of the contracts approved in the prior fiscal year. The FSA-848Bs selected for review do not have to be contracts approved in the prior fiscal year.

The COC, in consultation with the CED and local NRCS staff shall select the FSA-848Bs to be reviewed. COC’s should use the following guidelines in selecting FSA-848Bs for NRCS review. These guidelines are suggestions which COC’s and Service Center staff may modify or expand as determined appropriate. Any contracts up to the 10% requirement not selected using these criteria may be selected randomly.

- Identify contracts which have already experienced problems with stand establishment.
- Identify sites where it will be most difficult to establish a vegetative stand due to soils, precipitation or existing weed problems.
- Identify producers that are inexperienced in establishing vegetative CRP stands or who have had difficulties in the past.
- Limit the number of status reviews on the same contract to one unless additional reviews are determined necessary.--*
B Priority Practice Selection (Continued)

- CP29, when a structure, water facility, water development, or pipeline is included
- CP30
- CP31
- CP37
- CP39
- CP40
- CP41.

If NRCS and TSP certifies practice performance on AD-862 for practices listed in this subparagraph, and the 10 percent requirement has not been reached, all other CRP practices may be used to fulfill the 10 percent requirement.

C Items To Be Reported by Technical Agency

The technical agency shall report the following on AD-862:

- a certification showing items and extent that meet specifications, including tree thinning
- any items of performance that do not meet specifications and explain the reasons for the failure.
A Increase in Extent or C/S Before Payment

COC may increase the extent or C/S originally approved after performance is completed, but before payment is made on a case-by-case basis, if the extent approved was based on an estimate that proved to be in error and the producer could not reasonably have known in advance the extent needed to complete the practice.

All adjustments must be in compliance with the approved conservation plan. The conservation plan must be modified to reflect any changes in the extent of performance before COC may approve the change.

Notes: A new AD-245 is not required when increasing the extent or C/S after performance and before payment. Changes in the number of acres on CRP-1 is not authorized.

B Decrease After Performance and Before Payment

COC may decrease the extent and C/S originally approved after performance and before payment if the technical agency approves the lesser extent for practice completion.

All adjustments must be in compliance with the approved conservation plan. The conservation plan must be modified to reflect any changes in the extent of performance before COC may approve the change.

Note: Changes in the number of acres on CRP-1 is not authorized.

C Documenting Adjustment Before Payment

Documentation of adjustment shall include a manual change of the entries on AD-245. The person making changes shall initial and date the changes.

- Enter the total C/S and extent approved on AD-245 through the automated system. Refer to 1-CONSV, Part 5.
- Notify the producer by letter and enclose a copy of the manually revised AD-245.
D Increase Extent or C/S After Payment

COC may increase the extent or C/S originally approved after payment has been issued if 1 of the following situations occurred:

- County Office made an error on original extent or payment computation
- technical agency made an error on original extent reported
- producer failed to bring in a receipt or invoice
- other similar situation that resulted in a lesser extent or C/S payment.

E Documenting Increase After Payment

Documentation of extent or C/S increase shall include a manual change of the entries on AD-245. The person making changes shall initial and date the changes.

- Enter the total C/S and extent approved on AD-245 through the automated system. Refer to 1-CONSV, Part 5.
- Issue payment to the producer for the additional C/S.
B Ineligible Costs

*--If a participant submits an invoice from an entity in which any participant on the contract has a substantial beneficial interest according to subparagraph 215 C of handbook 1-PL for:

- labor, equipment use or other services the COC shall require the participant or entity to submit the actual contributions of time and equipment use and limit cost sharing to the rates established for contributions of personal labor and equipment

- materials or supplies the COC shall require the participant to provide an invoice showing the cost of the materials paid by the entity in which they have an interest and cost sharing shall be based those costs.

Participants and entities in which they hold an interest are not entitled to a profit on the establishment or maintenance of the cover on their own CRP contract.--*
A Eligible Costs

Review all applicable costs for labor, material, equipment used, sales tax, and value of used material to determine the total eligible cost of the practice.

Expenses for personal labor and personal equipment should be less than that charged by contractors who are entitled to make a profit for their efforts.

B Ineligible Costs

Ineligible costs for computing C/S earned include:

- pumps and pumping accessories
  
  **Exception:** Permanently installed pumps that are required as an integral part of water facilities constructed outside of a riparian buffer or filterstrip.

- dry wells

- engineering charges or permit fees

- consultant’s fees

- providing land or the right to use land or water

- meeting supplemental requirements, such as abstaining from harvesting

- loss or reduction in revenue from the land

- rent or other costs of using land

- shipping

- fence chargers.
A C/S Amounts

Exhibit 11 provides that certain components for practices CP21, CP22, CP29, and CP30 are eligible for C/S. The following limitations for C/S eligibility apply:

- C/S for the total of all water developments per contract shall not exceed $3,600
- C/S for the total of all water facilities per contract shall not exceed $2,400
- C/S for the total of all pipelines shall not exceed $2,400
- C/S per foot of fencing shall not exceed the STC- or COC-established cost for a 4-strand barbed wire fence.

Important: C/S is available for the lowest cost option that provides a dependable water source needed to address the resource concerns.

Multiple offers and multiple contracts to avoid C/S limitations are not authorized.

Example: A producer would like to install 3 water tanks, including applicable gravel apron and fencing. Each tank, including gravel apron, and fencing cost is estimated to cost $1,500 each. Because the maximum of $2,400 is eligible for C/S, the producer could receive a maximum payment of $2,400. To avoid the C/S limitation, the producer submits 2 separate offers on a portion of the acreage.

*--COC’s or CED’s shall not approve multiple CRP contracts for the same tract if COC--* determines the multiple contracts are to avoid the C/S limitation.

B Water Developments

Water developments are any of the following:

- spring
- dug, bored, or drilled well
- pond.
B Water Developments (Continued)

Producers may receive C/S if all of the following are met:

- total C/S for all water developments on a contract shall not exceed $3,600 per contract
- technical authority (NRCS, FS, TSP) determines, based on the specific site conditions, that a water development is needed to provide water for livestock
- livestock currently graze or normally graze (crop residue) the marginal pastureland or cropland acreage located adjacent to the acreage enrolled in CRP as a filter strip or riparian buffer
- water development is installed according to the NRCS FOTG standard and this handbook

**Note:** More than 1 water development per contract may be allowed, if needed, to provide the water for livestock, and no other technically feasible and economically viable alternatives for water are available.

- water development is the lowest cost option that provides a dependable water source.

**Examples:** NRCS or TSP determines, based on the site conditions, that the producer could construct a $3,400 spring or a $2,400 drilled well. Both options would provide dependable water and would address the resource concerns. The $2,400 drilled well **must** be selected.

A steep pasture is bisected by a stream. The steep topography and rocky site condition prohibit the crossing of the stream by a pipeline. Two spring developments may be permitted because it is the lowest cost option to provide a dependable water source. The maximum C/S for both springs may not exceed $3,600 for the contract.
C/S Policy for Water Development and Water Facilities (Continued)

C Water Development Distance From Filter Strip or Riparian Buffer

Water developments may be approved for C/S for CRP if the water development distance from the filter strip or riparian buffer contract acres are either of the following:

*--up to 750 feet from the outer edge of the filter strip or riparian buffer based on COC or CED approval--*

• up to 1,500 feet from the outer edge of the filter strip or riparian buffer based on STC approval.

Note: Water developments in excess of 1,500 feet from the outer edge of the filter strip or riparian buffer must be submitted to CEPD for approval. See subparagraph J.

D Water Facilities

Water facilities are any of the following:

• trough
• tank
• fencing, included around the tank or trough
• hydrants and other necessary piping, excluding pipeline to convey water to the watering facility.

Producers may receive C/S for water facilities if all of the following are met:

• total C/S payments for water facilities do not exceed $2,400 per CRP contract
• technical authority (NRCS, FS, TSP) determines, based on the specific site conditions, that water facilities are needed to provide water for livestock
D Water Facilities (Continued)

- livestock currently graze or normally graze (crop residue) the marginal pastureland or cropland acreage located adjacent to the acreage enrolled in CRP as a filter strip or riparian buffer

- water facilities are installed according to the NRCS FOTG standard and this handbook.

**Note:** More than 1 water facility per contract may be allowed, if needed, to address the resource concern, and no other technically feasible and economically viable alternatives for water are available.

**Important:** C/S is available to provide the lowest cost option that provides a dependable water facility needed to address the resource concerns.

**Example:** A producer could choose to install 3 water tanks, gravel aprons, and fencing. Each tank, gravel apron, and fencing costs $1,500 each. The total eligible costs are $4,500. Because a maximum of $2,400 is eligible for C/S, the producer could receive a maximum payment of $2,400.

E Water Facility Distance From Filter Strip or Riparian Buffer

Water facilities may be approved for C/S for CRP if the water development distance from the filter strip or riparian buffer contract acres are either of the following:

- less than 750 feet from the outer edge of the filter strip or riparian buffer based on COC *--or CED approval--*

- less than 1,500 feet from the outer edge of the filter strip or riparian buffer based on STC approval.

**Note:** Water facilities in excess of 1,500 feet from the outer edge of the filter strip or riparian buffer must be submitted to CEPD for approval. See subparagraph J.
F Pipelines

Installing pipelines to convey water to water facilities is eligible for C/S if all of the following are met:

- total C/S for the pipeline does not exceed $2,400 per CRP contract
- livestock currently graze or normally graze (crop residue) the marginal pastureland or cropland where the filter strip or riparian buffer is located
- pipeline is installed according to the NRCS FOTG standard and this handbook
- *--COC’s or CED’s may approve contracts with pipelines less than 750 feet from the outer edge of the filter strip or riparian buffer
- STC may approve pipelines less than 1,500 feet from the outer edge of the filter strip or riparian buffer.

G Fencing

C/S is available for installing fencing if the following are met:

- fencing is necessary to prohibit livestock access to the CRP acres devoted to filter strips or riparian buffers
- fencing is installed parallel and adjacent to the CRP acreage

Note: For extraordinary cases, if the existing size and width requirements for filter strips or riparian buffers in Exhibit 11 do not allow for installing the fence parallel and adjacent to the buffer, these cases may be submitted to CEPD through STC for review.

- C/S does not exceed the STC- or COC-established cost for a 4-strand barbed wire fence.

Note: Producers may install fencing other than a 4-strand barbed wire fence. However, C/S is limited to the cost of the 4-strand barbed wire fence.

Important: C/S is available only for the lowest cost option that provides adequate fencing needed to address the resource concerns.
H Cost

*COC or CED and STC should review all cost data for water facilities, water developments, water gaps, and livestock crossings. COC’s or CED’s and STC’s should take steps necessary to ensure that components of the practice are essential for the practice and the minimum needed for completing the practice.*

I Livestock Crossing

*Livestock crossing is only permitted if it is determined by COC or CED, based on the technical authority finding, that a livestock crossing is essential for implementing the filter strip or riparian buffer. C/S for all livestock crossings is limited to $1,800 per contract.*

J CEPD Waiver Request

Requests for waivers, according to subparagraphs C and E, forwarded to CEPD should include a minimum of the following:

- aerial photograph of the site
- location of the filter strip or riparian buffer
- location of current or proposed water facilities
- location of current or proposed pipelines
- size of pasture impacted and approximate amount of livestock using the pasture
- options considered
- option selected and the rationale for selecting the option
- estimated costs
- technical contact person for the plan
- environmental justification
- letters of concurrence from the State conservationist and STC
- any other pertinent documentation to support the request.
A C/S Amount

Paragraph 428 and Exhibit 11 provide that certain management activities are required for all practices. These management activities are eligible for C/S. C/S is limited to 50 percent of eligible cost up to $50 per acre per year not to exceed:

- $100 per acre for the life of the contract for a 10-year contract
- $125 per acre for the life of the contract for a contract in excess of 10 years.
Supporting Data

A Obtaining Evidence

*--COC’s or CED’s shall obtain evidence to determine proper payment. This includes, but is--* not limited to, the following:

- invoices
- canceled checks
- paid receipts
- analysis tags
- other evidence to determine proper payment.

Evidence **must** be obtained from participants to ensure that C/S received does not exceed 100 percent of the cost of the practice. Participants **must** provide acceptable evidence to determine proper payment regardless of whether flat rates; percent of cost, not to exceed $ ____ per unit of measure; or percent-of-cost method was used to determine the C/S payment.

**Note:** See subparagraph D.

*--COC’s or CED’s shall obtain acceptable evidence of practice completion regardless of whether the participant will receive C/S. COC’s or CED’s **must** ensure that the practice--* was completed according to the standards and specifications in the conservation plan.

B Retaining Documentation

*--Review, copy, and return to participant the supporting evidence required by COC or CED--* that the producer submits to receive C/S payments.

Keep supporting evidence for flat rates and percent-of-cost methods for payments on file in the County Office for 5 years after the expiration of CRP-1.
### Supporting Data (Continued)

#### C Invoices and Documentation for Percent of Cost

Process data for C/S payments based on percent of cost according to the following.

<table>
<thead>
<tr>
<th>Step</th>
<th>COC Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Applicant <strong>must</strong> provide satisfactory evidence to determine proper payment according to subparagraph A.</td>
</tr>
<tr>
<td>2</td>
<td>Manually enter the cost of performing the components of the practice on AD-245, page 2, column G, above the extent reported.</td>
</tr>
<tr>
<td>3</td>
<td>If a discount was applied, use the sale price minus the discount to compute C/S.</td>
</tr>
<tr>
<td>4</td>
<td>Consider costs reported paid by ineligible persons.</td>
</tr>
<tr>
<td><strong>Note:</strong></td>
<td>See paragraph 516 for an example.</td>
</tr>
<tr>
<td>5</td>
<td>If used materials are involved, COC shall determine and document the value of these materials based on current commercial rates.</td>
</tr>
<tr>
<td>6</td>
<td>If the producer performed the practice with the producer’s own labor, equipment, or materials, the producer shall submit signed, itemized statements.</td>
</tr>
</tbody>
</table>

Statements shall include:

- dates of work performed
- cost per hour charged for labor
- type of equipment used
- charge for equipment
- type and cost of materials used
- other applicable information.

Costs for personal labor and personal equipment should be less than that charged by contractors who are entitled to make a profit for their efforts.
D Documentation for Practices With Flat Rates

Producer shall provide supporting evidence of practice cost.

- Make a copy of all supporting evidence and attach to AD-245, page 2.
- Return the original supporting evidence to the applicant.

E Examples

Use the following data for all examples:

- the 100 percent Statewide or countywide average cost for “seedbed preparation” has been established at $20 per acre
- the maximum C/S allowed under CRP is 50 percent
- the flat rate established for “seedbed preparation” is $10 per acre.

Example 1: Producer A performs seedbed preparation and submits receipts indicating that the total cost for seedbed preparation was $21 per acre. Producer A’s C/S for seedbed preparation is $10 per acre.

Example 2: Producer B performs seedbed preparation and submits receipts indicating that total cost for seedbed preparation was $15 per acre. Producer B’s C/S for seedbed preparation is $10 per acre.

Example 3: Producer C performs seedbed preparation and submits receipts indicating that the total cost for seedbed preparation was $8 per acre, which is less than the $10 per acre flat rate. Producer C’s C/S for seedbed preparation is $8 per acre because Producer C’s C/S cannot exceed 100 percent of the actual cost in performing the practice component.
A When to Compute C/S

Compute C/S earned for the practice only after all these actions have been taken:

- AD-862 has been received from NRCS, TSP, or self certified by the producer
- the performance report has been reviewed
- all required information has been obtained
- approved adjustments have been made in:
  - C/S
  - extent
  - materials
  - practice components.

B Rounding

Round all C/S earned to the nearest whole dollar following normal rules of rounding.

C Computing C/S Earned

Manually compute C/S earned for practice and components and enter on AD-245, page 2, column H according to 1-CONSV.
C Computing C/S Earned

For CREP cost sharing, FSA will take the following actions after the participant reports completion of the practice on form AD-245, Page 2, Practice Approval and Payment Application, and submits receipts and other supporting documentation:

- determine the total costs eligible for cost sharing
- determine and issue the FSA 50 percent cost share payment
- determine the State’s:
  - 10 percent cost share payment by multiplying the FSA cost share by 0.2
  - determine any State maintenance payments in accordance with paragraph 124
  - determine any State PIP Advance Loan amounts in accordance with WA Exhibit 29
  - enter State cost share amount, maintenance payments and PIP Advance loan amounts, as separate entries, in the “Net Payment” block on the AD-245
- forward a copy of the completed AD-245, Page 2, to the applicable Conservation District.

Example: FSA determines the total eligible costs for establishing a CREP practice is $10,000, and a FSA cost share payment of $5,000. The producer has applied for a PIP Advance Loan. FSA determines State cost sharing of 1,000 ($5,000 X 0.2) and a PIP loan amount of $4,000 ($5,000 X 0.8)

FSA issues a CCC payment of $5,000 to the participant. FSA enters “WA State C/S $1,000” and “PIP Advance Loan $4,000” in the Net Payment block on the AD-245.

Note: See WA Exhibit 25 for an example of a completed AD-245, Page 2, for CREP.

Following receipt of the AD-245 from FSA, the Conservation District will:

- voucher the Conservation Commission for the State’s payment amount using AD-245, Page 2
- issue the State payments to the participant(s) upon receipt of funds.
A Ineligible Contributor

Any contributor that is not a signatory to the contract is:

- an ineligible contributor
- not eligible to receive C/S.

Examples of contributions from an ineligible contributor include materials, services, or cash provided to an eligible “person” according to 1-PL or person or legal entity according to 4-PL.

B Reporting Ineligible Contributions

Report the contribution of an ineligible contributor on AD-245, page 2. Include the following information:

- name of the ineligible contributor
- total cost of performing the practice
- dollar value of the ineligible contribution made
- describe the ineligible contribution.
A  CRP C/S

C/S payments shall not exceed 100 percent of cost paid by CRP participant, including contributions of ineligible persons, to carry out a CRP practice.

B  Computing C/S Payments

If an ineligible person contributed to a practice, C/S is computed by including the ineligible contributor’s contribution in the total cost. C/S is limited to the participant’s out-of-pocket cost.

Note: The participant shall never earn C/S exceeding 100 percent of out-of-pocket costs.

C  Example of Percent of Cost

Producer A, an eligible “person” according to 1-PL or person or legal entity according to 4-PL, incurs $4,000 for a practice. An ineligible contributor contributes $1,000 for the practice. Total cost of the practice was $5,000. Percent of cost rate is 50 percent.

The ineligible contribution of $1,000 will not be deducted from the total practice cost of $5,000 to compute C/S amount. Producer A will receive a $2,500 C/S payment, which is 50 percent of $5,000.

Note: C/S of $2,500 does not exceed 100 percent of the producer’s out-of-pocket cost.

D  Example of Percent of Cost, Not to Exceed

Producer A, an eligible “person” according to 1-PL or person or legal entity according to 4-PL, incurs $4,000 for a practice. An ineligible contributor contributes $1,000 for the practice. Total cost of the practice was $5,000. Percent of actual cost rate is 50 percent, not to exceed $3,000.

The ineligible contribution of $1,000 will not be deducted from the total practice cost of $5,000 to compute C/S amount. Producer A will receive a $2,500 C/S payment, which is 50 percent of the actual cost, not to exceed $3,000.

Note: C/S of $2,500 does not exceed 100 percent of the producer’s out-of-pocket cost.
E Example of Flat Rate

Producer A, an eligible “person” according to 1-PL or person or legal entity according to 4-PL, incurs $4,000 for a practice. An ineligible contributor contributes $1,000 for the practice. Total cost of the practice was $5,000. Flat rate for this practice is $3,500.

The ineligible contribution of $1,000 will not be deducted from the total practice cost of $5,000 to compute the C/S amount. Producer A will receive a $3,500 C/S payment, which is the flat rate for this practice.

Note: C/S of $3,500 does not exceed 100 percent of the participant’s out-of-pocket cost.
A Special Interest Groups

Special interest groups, such as Ducks Unlimited or Pheasants Forever, are eligible to receive C/S payments if they are part of the contract.

When special interest groups contribute to the cost of a practice, their contribution shall not be subtracted from the total cost when computing C/S.

Non-C/S services are permitted from special interest groups, such as Ducks Unlimited or Pheasants Forever, and are included in the calculation of total establishment costs.

Notes: C/S payment shall not exceed 100 percent of the eligible “persons” according to 1-PL or person or legal entity according to 4-PL contribution to the cost of installing the practice.

Special interest groups may not be eligible to receive annual rental payments.

B Example

An eligible producer contributes $5,000 to the cost of a practice. A special interest group contributes $1,500 to the cost of the same practice for a total cost of $6,500. The practice C/S level is 50 percent.

The eligible producer may receive a $3,250 C/S payment, which is 50 percent of $6,500.

Note: C/S of $3,250 does not exceed 100 percent of the producer’s out-of-pocket cost.
518 Dividing C/S Based on Contributions

A All Costs Paid by 1 Eligible “Person” or Person or Legal Entity

An eligible person who performs the obligation of establishing the practice may earn the C/S payment.

Note: See paragraph 491 for eligible persons.

B Costs Paid in Equal Proportions by Eligible “Persons” or Person or Legal Entity

If 2 or more eligible “persons” according to 1-PL or person or legal entity according to 4-PL equally contribute to the cost of performing the practice, divide C/S equally.

C Costs Paid in Unequal Proportions by Eligible “Persons” or Person or Legal Entity

If 2 or more eligible “persons” according to 1-PL or person or legal entity according to 4-PL contribute to the cost of performing a practice and COC determines that each “persons” according to 1-PL or person or legal entity according to 4-PL contributions are not in equal proportions, COC or CED shall:

- prorate the C/S payments based on the individual’s contributions
- document how each “persons” according to 1-PL or person or legal entity according to 4-PL percent of contribution was determined.

D All Costs Paid by Ineligible “Person”

Make no C/S payments to any person for a practice for which all costs are paid by ineligible “persons”.

2-29-12 2-CRP (Rev. 5) Amend. 8 Page 15-51
A  C/S Payments

CRP C/S payments shall:

- be made when authorized according to 1-FI
- be computed based on the rates and specifications in effect when C/S is approved on AD-245

**Note:** See paragraph 498 for an exception.

- be paid as soon as possible after all of the following have been completed:
  - COC or CED approves CRP-1
  - producer signs AD-245, page 2 and reports completion of the practice
  - NRCS or TSP certifies performance or producer self certifies performance
  - AD-1026 has been completed and signed
  - CCC-502 or CCC-901, as applicable, has been completed and signed
  - compliance with 1-PL or 4-PL, as applicable

**Note:** See 61-FI for prompt payment provisions.

- not exceed:
  - 50 percent of eligible costs
  - 50 percent of land value

**Exceptions:** See paragraph 491

- 100 percent of participant’s out-of-pocket cost
- be exempt from maximum payment limitation provisions and offset for debts to FLP
- only be paid to signatories to approved CRP
- not be authorized for splitting practices on the same land for C/S purposes between different Federal programs
A C/S Payments (Continued)

- not be issued to Federal entities
- be recorded on AD-245
- be spot-checked according to subparagraph 497 J.

Note: See 58-FI. Make partial payments according to 1-CONSV and paragraph 520. Record partial and final performance according to 1-CONSV.

B Approval Responsibilities for C/S Payments

STC or DAFP representative shall review certain AD-245’s before approval. The following shows required reviews, persons responsible for review, and persons responsible for approval or disapproval.

<table>
<thead>
<tr>
<th>AD-245’s for...</th>
<th>MUST be reviewed by...</th>
<th>BEFORE approval or disapproval by...</th>
</tr>
</thead>
<tbody>
<tr>
<td>• COC members</td>
<td>DD</td>
<td>DD.</td>
</tr>
<tr>
<td>• County ES employees</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• FSA County Office employees</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• other County USDA employees</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• Conservation District board members</td>
<td></td>
<td></td>
</tr>
<tr>
<td>State Office employees</td>
<td>STC</td>
<td>STC.</td>
</tr>
<tr>
<td>STC members</td>
<td>DAFP</td>
<td>SED.</td>
</tr>
<tr>
<td>SED’s</td>
<td>DAFP</td>
<td>STC.</td>
</tr>
<tr>
<td>Other FSA employees</td>
<td>DAFP</td>
<td>STC.</td>
</tr>
</tbody>
</table>

Note: Reviews must be completed for any entity for which the employees, who are subject to a required review, have a substantial beneficial interest, according to 1-PL or 4-PL, as applicable.

Persons making the required reviews shall ensure that all:

- eligibility requirements are met
- required entries on CRP-1 and CRP-2 are completed.

SED or STC, as applicable, shall not approve CRP-1’s unless authorized by DAFP in writing.
A Authority for Partial Payment

Partial payment for a practice may be paid if the participant will complete all of the practice-*within the time prescribed by COC or CED.--*

If the practice is not completed within the time prescribed, the participant must refund the payment.

B Making Partial Payments

Make partial payments only when all of the following conditions are satisfied:

- a request for payment is made on AD-245

- COC or CED and NRCS or TSP determine that the completed components are a--*reasonable attainment toward completing the practice

- the participant agrees to complete the practice on FSA-18, which must be filed with AD-245.

Note: See Exhibit 41 for instructions on completing FSA-18.

NRCS or TSP must certify performance before any payment is made.
A Adjustments

County Offices shall adjust AD-245, page 2, if:

- overpayment is caused by an error in data or computations, which includes excess refunds
- underpayment is caused by an error in data or computations, which includes deficient refunds.

Note: The participant must sign the corrected AD-245, page 2.

522-545 (Reserved)
A When to Revise CRP-1's

CRP-1’s must be revised for the following reasons:

- change in farm number after a reconstitution
- change of participants
- change in producer’s shares
- part of the land under CRP-1 is terminated by the producer according to subparagraph 571 B
- part of the land under CRP-1 is terminated because of a violation
- land under CRP-1 is withdrawn from cropland status
- land under CRP-1 is sold to another producer
- loss of control of land, including death, sale, inheritance, incompetency, foreclosure, or eminent domain
- acreage changes because of new aerial imagery
- removal of CRP because of natural conditions.

Note: This shall be applicable to all CRP-1 signups.

*--COC or CED shall not approve requests to revise CRP-1’s to increase the number of--*
participants when the original number of participants were not eligible to receive the full value of CRP-1.

Example: Joe historically owned and operated acreage that was offered and accepted for CRP. The acreage accepted supports a $150,000 annual rental payment. Joe is limited to $50,000 by the annual payment limitation. Joe requests to revise CRP-1 to add Steve and Tim as tenants to CRP-1, each receiving $50,000. COC *--or CED shall not approve these revisions; however, if Joe sold CRP acreage through an arms-length transaction to Steve and Tim, COC or CED could--*
approve CRP-1 for Steve and Tim as successor’s-in-interest, providing Joe did not maintain a reversionary interest in the acreage and all other eligibility requirements are met.
B Revising Erroneous Acre Determinations

Revise erroneous acre determinations according to the following.

Note: This subparagraph only applies to cases where there was no measurement service completed.

<table>
<thead>
<tr>
<th>IF, after CRP-1 is approved, it is determined that CRP-1 includes…</th>
<th>THEN…</th>
</tr>
</thead>
<tbody>
<tr>
<td>more eligible acres than originally approved</td>
<td>• revise CRP-1 to include the additional eligible acres</td>
</tr>
<tr>
<td></td>
<td>• do not make retroactive payments on the additional acres.</td>
</tr>
<tr>
<td>less eligible acres than originally approved</td>
<td>• revise CRP-1 to correct the error</td>
</tr>
<tr>
<td></td>
<td>• do not collect overpayments if it is an FSA, NRCS, or TSP error.</td>
</tr>
</tbody>
</table>

C Notification of Revisions

*--COC or CED must notify all CRP participants in writing that the conservation plan and CRP-1 must be revised to reflect the change to CRP-1. Participants must consult with NRCS or TSP to revise the conservation plan. Notify all participants, in writing, upon COC or CED receipt of the revised conservation plan, that the participants have 60 calendar—* days from the date of notification to sign the revised CRP-1.

D Required Forms and Signatures

The following provides required forms and signatures.

<table>
<thead>
<tr>
<th>Form</th>
<th>Signature Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>• CRP-1 [Exhibit 21]</td>
<td>• Operator.</td>
</tr>
<tr>
<td>• CRP-1 Appendix (Exhibit 29), if applicable</td>
<td>• Operator’s spouse, if spouse is another producer.</td>
</tr>
<tr>
<td>• NRCS-CPA-1155</td>
<td>• Each owner whose name is on the deed.</td>
</tr>
<tr>
<td>• Certification Statement [subparagraph 130 E]</td>
<td>Note: CRP-1 signatures are required 60 calendar days after COC notification.</td>
</tr>
<tr>
<td>• Conservation Plan and Contract Support Documents</td>
<td></td>
</tr>
</tbody>
</table>

Note: An operator is not required to sign a revised CRP-1 if the operator provides a written statement voluntarily relinquishing rights to CRP.
E Requirement Exceptions

The requirements for signatures apply unless:

- a trustee of BIA representing native Americans owning the land signs on their behalf

**Note:** All CRP-1’s signed by BIA representative on behalf of native Americans owning the land shall be reviewed by RA. COC shall not approve CRP-1 until RA determines that the required signatures have been obtained.

- a native American has a restrictive 5-year BIA farm lease that has been extended according to BIA provisions.

F Other Signatures

*--COC or CED shall:--*

- ensure that operators and tenants receive fair and equitable treatment
- verify that this provision is being followed before making C/S or annual rental payments.
G Revise CRP-1’s

Revise CRP-1 only according to the following.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Assign an alpha suffix to CRP-1 number.</td>
</tr>
</tbody>
</table>
| 2    | Transfer original CRP-1 data to revised CRP-1. See Exhibit 21.  
- Change items affected by revisions.  
- Leave rental rate and expiration date the same.  
- Have participants sign revised CRP-1. |
| 3    | Have participants sign and date CRP-1 Appendix, if applicable. |
| 4    | Enter “VOID” on original CRP-1. |
| 5    | Provide copy of revised CRP-1 and CRP-1 Appendix, if applicable, to all participants.  
**Note:** Do not provide a different CRP-1 Appendix if the participant on the revised CRP-1 is the same participant signing the original CRP-1. See subparagraph 546 H. |
| 6    | Revise automated CRP-1. |
546 Revisions to CRP-1’s

G Revising CRP-1’s

In the upper margin of the CRP-1, indicate the date of the applicable Appendix. See subparagraph J.
Revisions to CRP-1’s (Continued)

H  Revising CRP-1 if Plan Is Modified

If CRP-1 is revised for reasons other than modifying the plan, consult with NRCS or TSP about the need for modifying the approved conservation plan.

- Do not revise CRP-1 for only changes to the approved conservation plan. NRCS or TSP will use SCS-LTP-12.

  Note: Changes in practices require a revision to CRP-1.

- NRCS or TSP, in consultation with the participant, is responsible for changing the approved conservation plan.

  *--COC or CED shall consider recommendations for changes in CRP practices.--*

- Final approval for changes in C/S obligations is the responsibility of COC.

- Obtain a signed, modified conservation plan from NRCS or TSP.

- An approved conservation plan must be modified to reflect signatures of new owners if CRP-1 is revised because of succession-in-interest.

I  Policy for Using Correct CRP-1 and CRP-1 Appendix

Successors-in-interest electing to succeed to an existing CRP-1 shall:

- sign the current version of CRP-1
- receive the same CRP-1 Appendix that was agreed to by the predecessor.

  Note: Do not provide a different CRP-1 Appendix if the participant on the revised CRP-1 is the same participant signing the original CRP-1.
J  Applicability of CRP-1 Appendix for CRP Offers

The following provides the dates of each CRP-1 Appendix used for CRP offers.

<table>
<thead>
<tr>
<th>IF CRP acreage was offered during...</th>

**Note:** Continuous signup 34 is used for EFCRP.
Revising CRP-1 Because of Loss of Control of Land

A General Policies

CRP-1 may need to be revised because of loss of control of land under CRP-1.

If loss of control occurs because of death, sale, inheritance, incompetency, foreclosure, or exercise of eminent domain, follow:

- subparagraph 630 A for conservation easements placed on CRP land
- paragraph 555 for succession-in-interest
- subparagraphs 550 B and C for other revisions
- paragraph 551 for land acquired by a Federal agency
- paragraph 552 for land acquired by a Federal agency
- paragraph 571 for:
  - land acquired by eminent domain
  - terminations
  - terminations because of foreclosure.

B If Owner Loses Control of CRP Land

Follow this table if owner loses control of CRP land.

<table>
<thead>
<tr>
<th>IF loss of control occurs...</th>
<th>THEN...</th>
</tr>
</thead>
<tbody>
<tr>
<td>on a tract of land on which all CRP-1 acres are located</td>
<td>revise CRP-1 and the approved conservation plan according to paragraph 546.</td>
</tr>
</tbody>
</table>
| on part of CRP-1 acreage | • continue CRP-1 on the remaining acreage still under control of participant  
                           • follow paragraph 571 for partial terminations  
                           • offer person acquiring control successor-in-interest rights. |
| and CRP-1 is not continued on any part of acreage | terminate CRP-1 according to paragraph 571. |
A Voluntary Withdrawal by Operator or Tenant From CRP-1

CRP-1 acreage over which an operator or tenant voluntarily relinquishes the right to CRP-1 benefits may be continued by the owner or other eligible participant becoming a successor-in-interest.

The participant acquiring an interest in CRP-1:

- may share in payments made according to division of shares on CRP-1
- shall be responsible for complying with CRP-1 provisions
- shall be liable for payment reductions for noncompliance after becoming a party to CRP-1.

B COC Action

An operator must submit a request, in writing, to COC to be removed from CRP-1 when the operator no longer has an interest in CRP acreage.

COC shall:

- document basis for removal, in both COC minutes and in CRP folder
- verify that a signed statement was received from operator leaving voluntarily
- give owner the option of continuing to operate the land or obtaining a new operator if previous operator:
  - voluntarily relinquishes rights to CRP benefits
  - files for bankruptcy
  - dies and the estate fails to succeed within 60 calendar days of COC notification.
A Gaining Control of Land Under CRP-1

Follow this table when the participant of an existing CRP-1 gains control of other land already under CRP-1.

<table>
<thead>
<tr>
<th>WHEN...</th>
<th>THEN...</th>
</tr>
</thead>
<tbody>
<tr>
<td>participant chooses to assume CRP-1 on newly acquired land</td>
<td>• do not combine CRP-1’s</td>
</tr>
<tr>
<td></td>
<td>• revise CRP-1 on new land.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> See paragraph 555 for successor-in-interest.</td>
</tr>
<tr>
<td>participant chooses to continue both CRP-1’s</td>
<td>• advise participant of maximum payment limitation</td>
</tr>
<tr>
<td></td>
<td>• adjust latest approved CRP-1 annual payment amount to reflect no more than maximum payment limitation, if necessary.</td>
</tr>
<tr>
<td>either CRP-1 will not be continued</td>
<td>terminate applicable CRP-1 according to paragraph 571</td>
</tr>
</tbody>
</table>
A Revision Because of New Aerial Imagery

If new aerial imagery or digitizing new photography (certified CLU’s or GIS measurement) results in a change in the approved CRP acreage or official cropland for the farm, follow 1-CRP, paragraph 285.

B Revision to Substitute Fields

Fields designated under CRP-1 cannot be substituted because the original field is under a long-term contract.

C Removal of CRP Acreage Because of Natural Conditions

Apply this subparagraph to CRP-1 when CRP acreage no longer exists because of natural conditions.

Example: The original CRP-1 contained 50 acres along a river. The river eroded 3 acres of land downstream; therefore, only 47 acres remain in the field.

Do not apply this subparagraph to CRP acreage that is underwater or that has been severely damaged.

County Offices shall take the following action.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Revise CRP-1 to remove acreage that has been physically removed from the property after COC determines that the acreage is no longer eligible for CRP because it does not exist.</td>
</tr>
<tr>
<td>2</td>
<td>See 3-CM for procedure on adjusting farm and cropland acreage.</td>
</tr>
</tbody>
</table>

D Revision Authorized by DAFP

Revisions, other than in this section, require DAFP approval.
Gain of Control of CRP Land by a Federal Agency

A Federal Agency Gains Control of CRP Land

Federal agencies that acquire property that contains CRP acreage are **ineligible** to succeed to or earn payments under CRP or offer acreage for enrollment in CRP. However, CRP-1 may be continued on land acquired by a Federal agency if:

- CRP acres are maintained according to CRP-1 terms and conditions
- the operator on CRP-1 at the time the Federal agency gains control continues to be the operator of the property, unless this operator signs a written statement relinquishing rights to CRP.

**Note:** The Federal agency **must** provide evidence of control to the operator for the remainder of CRP-1 period. Other eligible tenants, including the previous owner, may continue to earn CRP payments, as “other producers.”

If CRP-1 will be continued with eligible CRP participants, do the following:

- use CRP-20 (Exhibit 43) to notify participants of the conditions for continuing CRP-1
  
  **Note:** Send a copy of CRP-20 to the Federal agency.

- have CRP participants and an authorized representative of the Federal agency sign CRP-1E Addendum (Exhibit 44) within 60 calendar days of COC notification

- file a copy of CRP-20 and CRP-1E Addendum in the participant’s folder.

If a Federal agency acquires property that contains CRP land and chooses **not to continue** CRP-1:

- terminate CRP-1 on the affected acres
- **do not** require refund of previous CRP payments if Federal agency agrees to maintain the acreage according to the CRP-1 terms and conditions.

  **Note:** CRP participants may earn their prorated share of eligible CRP payments according to paragraph 463.
A Federal Agency Gains Control of CRP Land (Continued)

When a Federal agency maintains the CRP acreage and the land is subsequently sold to a new owner, if CRP-1 will:

- be continued, see paragraph 555 for succession-in-interest
- not be continued, see paragraph 571 for terminations.

B Exception When FLP Gains Control of CRP Land

The provision that an eligible successor must control CRP acreage for the remainder of CRP-1 period does not apply if during the period FLP holds title to property that contains CRP acreage and an eligible FLP borrower exercised the right to repurchase the property under FLP’s “lease back/buy back” provisions.

Note: See Exhibit 6

CRP payments may be continued if:

- participants have received CRP-20
- FLP continues to hold title to the property and the FLP borrower has signed:
  - a lease to repurchase the property that includes CRP acreage
  - CRP-1E Addendum within 60 calendar days of notification.

CRP payments shall be prorated to eligible participants, based on the date the lease was approved by FLP.

Note: No payment shall be made under CRP-1 until FLP and the eligible FLP borrower have entered into a lease to repurchase the property under “lease back/buy back” provisions.

County Offices shall:

- review the FLP lease to ensure that the FLP lease does not otherwise violate CRP provisions
- file a copy of the FLP lease, CRP-20, and CRP-1E Addendum in the participant’s folder.
C Continuing CRP-1 With FLP Borrower

CRP-1 shall be revised only if the land is sold to an eligible participant who agrees to continue CRP-1.

During the period the eligible borrower is attempting to repurchase the property under FLP’s “lease back/buy back” provisions, the FLP borrower shall:

- be considered as an “other producer” under CRP-1
- forfeit all rights to future payments and refund, subject to previous payments made under CRP-1, if the property is:
  - not repurchased by the FLP borrower within 5 years
  - sold to an eligible participant who does not continue CRP-1.

If the FLP borrower:

- does not repurchase the land under CRP-1, see paragraph 571 for terminations
- repurchases the land under CRP-1, see paragraph 547 for revisions.

D Reoffering CRP Acreage Under FLP Control

CRP acreage under FLP control may be reoffered if:

- the person offering the acreage has signed a purchase agreement with FLP before the end of signup
- the person offering the acreage meets the eligibility requirements in paragraph 126
- the acreage being reoffered meets all other eligibility requirements.

*--COC or CED shall not approve CRP-1 until proof of ownership is provided.--*

E Policy Regarding Operators

The exceptions provided in this paragraph do not relieve COC’s of the responsibility to ensure that the rights of operators or tenants are protected.

Eligible operators or tenants, who are signatories on original CRP-1, shall:

- continue to earn their share of CRP payments
- not be arbitrarily removed or replaced as eligible participants on CRP-1.
A Applicability of Husband and Wife Provisions for CRP-1’s Approved Before October 1, 2008

Spouses may be determined separate “persons” for 1991 and subsequent years according to 1-PL.

Follow 1-PL when revision of original CRP-1 is requested because of an additional “person” determination. Only revise existing CRP-1’s if the commensurate shares are changed after a separate “person” determination is made.

B Signature Requirements on CRP-1’s

Spouses in a joint operation are required to sign CRP-1’s, including an existing CRP-1, if the spouses are subsequently determined to be separate persons. If only 1 spouse signed the original CRP-1 for a joint operation, the other spouse must sign CRP-1 after the spouses have been determined to be separate persons for payment limitation purposes.

<table>
<thead>
<tr>
<th>IF...</th>
<th>THEN...</th>
</tr>
</thead>
<tbody>
<tr>
<td>a revised CRP-1 is signed by the spouses within 15 calendar days after notification of person determination</td>
<td>*--COC or CED shall approve the revised CRP-1.</td>
</tr>
<tr>
<td>a revised CRP-1 is not signed after 15 calendar days but is signed within 30 calendar days after notification of person determination</td>
<td>STC must approve late-filed signature before COC or CED approval of CRP-1.--*</td>
</tr>
<tr>
<td>a revised CRP-1 is not signed within 30 calendar days after notification of person determination</td>
<td>CRP-1 may not be approved and producer shall be advised of appeal rights.</td>
</tr>
</tbody>
</table>
Revising CRP-1 Because of Inheritance

A Policy

A producer who becomes the owner of land enrolled in CRP because of inheritance, and succeeds to CRP-1, may receive payments for that contract without regard to the amount of payments received under any other contract executed before the inheritance. The participant shall provide adequate documentation, as defined by COC, to prove that acreage was inherited.

B When the Recipient Already Has an Interest in the Inherited CRP-1

When a CRP participant inherits CRP acreage and the recipient already has a share of the inherited CRP-1, use the following table for guidance.

**Note:** Each example assumes the son inherits the father’s share of CRP-1.

<table>
<thead>
<tr>
<th>IF the recipient’s revised payment total for all CRP-1’s is...</th>
<th>THEN...</th>
</tr>
</thead>
<tbody>
<tr>
<td>less than $50,000</td>
<td>• revise the inherited CRP-1 to remove the deceased participant and increase the shares of the recipient to 100 percent according to 1-CRP</td>
</tr>
<tr>
<td>Example: Father and son share CRP-1, each receives 50 percent of the $20,000 annual rental payment.</td>
<td>• process payments in the normal manner according to 1-CRP.</td>
</tr>
<tr>
<td>greater than $50,000</td>
<td>• revise the inherited CRP-1, according to 1-CRP, into 2 contracts; 1 contract will have the recipient’s original payment amount, the other will have the inherited payment amount</td>
</tr>
<tr>
<td>Example: Father and son share CRP-1, each receives 50 percent of the $60,000 annual rental payment.</td>
<td>• The acreage on the contracts shall be divided accordingly.</td>
</tr>
<tr>
<td></td>
<td>• process annual rental payments for the inherited contract through the special CRP payment processing option according to 1-CRP, paragraph 361.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Note:</strong> On Special Payment Reductions Screen EPCJ7301, ENTER “Y” in the “Inherited CRP-1 over PL” field.</td>
</tr>
</tbody>
</table>

7-28-10 2-CRP (Rev. 5) Amend. 1
C When the Recipient Has No Prior Interest in CRP-1

When a CRP participant inherits CRP acreage, and the recipient had no share in the contract before inheritance, use the following table for guidance.

<table>
<thead>
<tr>
<th>IF the recipient’s revised payment total for all CRP-1’s is...</th>
<th>THEN...</th>
</tr>
</thead>
<tbody>
<tr>
<td>less than $50,000</td>
<td>• revise the inherited CRP-1 to remove the deceased participant and add the recipient</td>
</tr>
<tr>
<td></td>
<td>• payments will be processed in the normal manner according to 1-CRP.</td>
</tr>
<tr>
<td>greater than $50,000</td>
<td>• revise the inherited CRP-1 to remove the deceased participant, and add the recipient according to 1-CRP</td>
</tr>
<tr>
<td></td>
<td>• revise through pay limit system using the inheritance adjustment. See 3-PL (Rev. 1).</td>
</tr>
</tbody>
</table>
554 Transferring Land From CRP to WRP, GRP, HFRP, or EWP Floodplain Easement

A Transferring Existing CRP-1’s

*--Land that is subject to an existing CRP-1 may be accepted into WRP, FRPP, GRP, HFRP, or EWP Floodplain Easement at the discretion of NRCS.

When issuing CRP annual rental payments, the amount shall be prorated from October 1 to the filing date of the easement for WRP, FRPP, GRP, HFRP, or EWP Floodplain Easement.

Notes: Do not cancel CRP-1 until all WRP, FRPP, GRP, HFRP, or EWP Floodplain Easement documents are approved and filed. See 1-CRP, paragraph 296 to cancel CRP-1.

Refunds of C/S payments shall not be required when terminating CRP to enroll in WRP, FRPP, GRP, HFRP, or EWP Floodplain Easement. Refund of CRP-SIP and--* CRP-PIP is required.

Land terminated from CRP is no longer included in the 25 percent cropland limitation or 10 percent easement limitation.

B Transferring Portion of CRP Acreage

*--If only a portion of the land subject to CRP-1 is accepted into WRP, FRPP, GRP, HFRP, or EWP Floodplain Easement, terminate only that portion of CRP-1 that is affected by enrollment into WRP, FRPP, GRP, HFRP, or EWP Floodplain Easement as follows.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Revise CRP-1 into separate contracts using suffix number according to 1-CRP.</td>
</tr>
<tr>
<td>2</td>
<td>After revising CRP-1, terminate CRP-1 for the acres transferring to WRP, FRPP, GRP, HFRP, or EWP Floodplain Easement.--*</td>
</tr>
</tbody>
</table>
A Eligible Person Acquiring Interest in CRP Land

An eligible person may become successor-in-interest to CRP-1 if:

- land has been sold
- there has been a change in owner or operator
- a foreclosure or involuntary loss of land occurs.

Follow this table if an eligible person acquires an interest in CRP lands.

<table>
<thead>
<tr>
<th>IF eligible person elects...</th>
<th>THEN...</th>
</tr>
</thead>
<tbody>
<tr>
<td>not to continue CRP-1</td>
<td>terminate CRP-1 according to paragraph 571</td>
</tr>
<tr>
<td>to continue CRP-1</td>
<td>revise CRP-1 according to subparagraph 546 G.</td>
</tr>
</tbody>
</table>

B Eligible Succession

*--Before approving CRP-1 revisions, COC or CED shall ensure that the successor-in-interest:--*

- understands that any outstanding adjustments because of violations by the previous participant will be the successor’s responsibility

- has 1 of the following:
  - a valid deed to the land under CRP-1
  - a contract-for-deed with the seller that has been properly filed under applicable State law

  **Note:** Contact RA for further guidance.

- a final journal entry of a probate court showing change of ownership, if RA concurs

- acquired right of occupancy, through foreclosure proceedings, to the land under CRP-1.

  **Note:** This provision applies only to right of occupancy acquired as a result of foreclosure proceedings.
C Full or Partial Succession

The following shows the difference between full succession-in-interest and partial succession-in-interest.

<table>
<thead>
<tr>
<th>IF...</th>
<th>AND...</th>
<th>THEN consider succession...</th>
</tr>
</thead>
<tbody>
<tr>
<td>the owner is the only signatory to CRP-1</td>
<td>no longer has control of CRP land</td>
<td>to be full succession-in-interest.</td>
</tr>

</tr>
</tbody>
</table>

Note: The shares on revised CRP-1 shall be agreed to by successor and operator, and approved by COC or CED.

D Responsibilities of Eligible Successors

An eligible person who acquires an interest in land under CRP-1 and becomes a successor-in-interest by signing CRP-1, regardless of the division of shares, is:

- entering into a binding agreement with CCC for the remainder of the CRP-1 period
- jointly and severally liable for complying with terms and conditions of CRP-1

Exception: Participants that sign CRP-1 with zero percent interest in the annual rental payment shall not be held responsible for contract compliance.
Successor-in-Interest (Continued)

D  Responsibilities of Eligible Successors (Continued)

• responsible for:
  • refunding all payments made since the effective date of CRP-1, including payments earned by previous participant, if CRP-1 is subsequently terminated
  • complying with payment limitation provisions
  • complying with landlord and tenant provisions.

*--COC or CED shall notify previous CRP-1 signers, when a successor-in-interest CRP-1 is approved, that they are no longer responsible for complying with CRP-1 for the acreage in which they no longer have an interest.

An operator or tenant, or his or her estate cannot be replaced unless the operator, tenant, or his or her estate agrees, in writing, to voluntarily withdraw from CRP-1 and is determined by *--COC or CED to no longer be an eligible participant.

COC or CED shall notify:--*

• new landowners and authorized estate representatives that they have an opportunity to succeed to CRP-1

Notes: If a revised CRP-1 is not signed within 60 calendar days from the date of *--notification by COC or CED, CRP-1 shall be terminated. No--* successor-in-interest will be allowed.

FSA shall not force landowners to agree to accept an estate representative as an operator. If a landowner refuses to sign a revised CRP-1, CRP-1 shall be terminated without requiring refunds. See paragraph 571

• the bankruptcy trustee that CRP-1 shall be affirmed. See paragraph 580
Successor-in-Interest (Continued)

E  Policy for Using Correct CRP-1 and CRP-1 Appendix

Successors-in-interest electing to succeed to an existing CRP-1 shall:

- sign the current version of CRP-1
- receive the same CRP-1 Appendix that was agreed to by the predecessor.

**Note:** **Do not** provide a different CRP-1 Appendix if the participant on the revised CRP-1 is the **same** participant signing the original CRP-1.

556  Revisions Authorized by DAFP

A  DAFP Authorized Revisions

Revisions, other than in this Section, require DAFP approval.

557-570  (Reserved)
Section 2 Terminations, Foreclosures, Receiverships, and Bankruptcies

571 Terminations

A Policy for Terminating All Land Under CRP-1

See WA Exhibit 16 for required documentation when submitting requests for a waiver of refunds for any contract termination.
Section 2  Terminations, Foreclosures, Receiverships, and Bankruptcies

571  Terminations

A Policy for Terminating All Land Under CRP-1

COC shall terminate all land under CRP-1 before its expiration date, if any of the following are met:

- participant loses control of or transfers all of the land under CRP-1 and there is no successor-in-interest

- all signatories voluntarily request, in writing, to terminate all land under CRP-1

- participants’ request for termination of part of the land under CRP-1 was disapproved and participants proceed to violate the terms and conditions of CRP-1 on that land

Example: Participant has 100 acres enrolled in CRP. Participant requests to terminate part of the acres under CRP-1 to return to crop production. The request is not approved. Producer plants part of the acres under CRP-1 to corn. COC shall terminate all land (100 acres) under CRP-1.

Note: See subparagraph 603 E.

- all land under CRP-1 is transferred to WRP, GRP, HFRP, or EWP Floodplain Easement according to paragraph 554

- CRP practice or practices failed on all land under CRP-1 according to subparagraph 493 B and COC determines the cost of restoring the cover outweighs the benefits received from the restoration

- land under CRP-1 is under lease for gas, oil, earth, or mineral rights and the owner of these rights exercises the option to extract the gas, oil, earth, or minerals on all of the land under CRP-1 according to paragraph 154

- CRP-1 was approved based on erroneous eligibility determinations according to paragraph 638

- NRCS determines continuous signup practice cannot function on its own when a partial termination is requested.

Note: See paragraph 573 for terminating CRP-1’s.
571 Terminations (Continued)

B Policy for Terminating Part of the Land Under CRP-1

COC shall terminate part of the land under CRP-1 before its expiration date, if any of the following are met:

- participant loses control of or transfers part of the land under CRP-1 and there is no successor-in-interest

- COC could not determine that a good faith effort was made according to paragraph 603
  
  Note: See paragraph 603 to determine whether all or part of the land under CRP-1 will be terminated.

- part of the land under CRP-1 is transferred to WRP, GRP, HFRP, or EWP Floodplain Easement according to paragraph 554

- CRP practice or practices failed on part of the land under CRP-1 according to subparagraph 493 B and COC determines the cost of restoring the cover outweighs the benefits received from the restoration

- land under CRP-1 is under lease for gas, oil, earth, or mineral rights and the owner of these rights exercises the option to extract the gas, oil, earth, or minerals on part of the land under CRP-1 according to paragraph 154

- part of the land under CRP-1 was approved based on erroneous eligibility determinations according to paragraph 638

- both of the following conditions are met:

  - all signatories to CRP-1 request, in writing, to terminate part of the acreage under an approved CRP-1

  - the later of the following:

    - CRP-1 has been effective for at least 2 years

  Exception: CRP-1’s that have been re-enrolled do not have to be in effect for at least 2 years.

  Example: CRP-1 number 196 was enrolled in 1997 and was scheduled to expire September 30, 2007, but was re-enrolled under REX with an effective date of October 1, 2007. CRP-1 does not have to be in effect for 2 years to request a partial termination.
Terminations (Continued)

B Policy for Terminating Part of the Land Under CRP-1 (Continued)

- the approved cover is established on the acreage
- for continuous signup practices only, NRCS determines the remaining practice functions after part of the land under CRP-1 is terminated.

*--Notes: A paid-for measurement service must be completed to determine the acreage terminated. The producer must refund annual rental payments plus interest and liquidated damages for the acreage terminated. Any cover destroyed on the acreage not terminated must be re-established at the producer’s expense.

SRR’s for remaining acreage under CRP-1 must not be recalculated.

Requests for termination of part of the land under CRP-1 that do not meet these requirements may only be approved by DAFP.--*

Requests for DAFP approval of termination of part of the land under CRP-1 must include, at a minimum:

- written request, signed by all signatories to CRP-1, to terminate part of the acreage under an approved CRP-1 that includes the reason for termination and what the land will be used for after termination
- COC and STC recommendations
- map of acreage to be terminated
- copy of original CRP-2 or CRP-2C and revised CRP-2 or CRP-2C with all item numbers completed for acreage that will remain enrolled in CRP. Participants shall not sign revised CRP-2 or CRP-2C.--*

Note: See paragraph 573 for terminating CRP-1’s.
Terminations Because of Foreclosures and Eminent Domain

A CRP-1 Terminated Because of Foreclosure

CRP participants shall not be required to refund payments received when CRP-1 is terminated because of foreclosure, regardless of the foreclosure date.

**Note:** Sufficient documentation must be provided to COC or CED verifying the CRP acreage was foreclosed upon.

If the participant regains control of the land under contract, CRP-1 will be in effect on the date of the foreclosure shall apply.

**Note:** See paragraph 580

B Land Acquired Under Eminent Domain

CRP land acquired under threat of condemnation or by eminent domain for public use is considered an involuntary loss of land by the participant.

COC shall:

- terminate the CRP acres acquired through condemnation or eminent domain
  
  **Exception:** CRP acreage may be continued under CRP-1 if there is minimal impact on the affected acreage and the vegetative cover is maintained.

- waive the refund of annual rental payments and C/S payments

- not assess liquidated damages.

**Note:** CRP payments shall be prorated to eligible participants based on the date the land was acquired by eminent domain.
A How to Terminate CRP-1

COC shall do the following when terminating all or part of the land under CRP-1:

- clearly document the facts in the COC minutes
- on CRP-1, write, “Terminated for (reason), REF COC minutes of (date of COC meeting)”
  
  Note: Person making entries shall initial and date.
- cancel automated CRP-1

  *--Important: Terminated CRP-1’s may only be reinstated by DAFP. COC’s, CED’s, or STC’s do not have authority to reinstate a terminated CRP-1.--*

- notify each CRP-1 participant of all of the following:
  - reason for termination
  - they are no longer required to comply with terms of CRP-1 for which they no longer have an interest
  - they are ineligible to receive future CRP payments for acreage terminated
  - conservation compliance provisions apply
  - when part of the land under CRP-1 is terminated, they have 60 calendar days from the date of notification to obtain all signatures on revised CRP-1

  Note: If all signatures are not obtained within 60 calendar days of notification by COC, CRP-1 shall be terminated.

- amount that must be refunded. See paragraph 574.

  Note: Standard payment reductions do not apply to terminated CRP-1’s.
574 Required Refunds

A Refunds

For terminations, COC must request refund of all of the following * * *:

- all annual rental payments plus interest
- all C/S payments, plus interest
- CRP-SIP, plus interest
- PIP, plus interest
- CP23, one-time WRI payment, plus interest
- liquidated damages, if applicable, according to paragraph 577

Notes: If a participant was assessed a payment reduction during the CRP-1 period, required refunds shall not include the amount of the reduction.

C/S payments may be prorated after the permanent cover has been established for 5 years if COC determines, after consulting with the Conservation District and NRCS, that the established conservation practices have achieved the desired conservation benefits.

A second party review shall be conducted on all refund calculations.

See paragraph 576 for waiver of refunds.
Refunds Not Required

A No Refunds Required

Refunds of CRP-1 payments are not required of:

- operators when the administrator or heirs of an owner’s estate do not become successor-in-interest to CRP-1

- the owner’s estate if the estate or the heirs do not succeed to CRP-1

  Note: If the owner’s estate succeeds to CRP-1, and the heirs subsequently do not succeed, refunds are not required from the estate.

- heirs if the deceased has no estate and the heirs do not succeed to CRP-1

- participants when both of the following apply:
  - an operator’s estate wants to succeed to CRP-1
  - the landowner refuses to sign a revised CRP-1

- participants when CRP-1 is being terminated to enroll the acreage in a State conservation program, WRP, FRPP, EWP Floodplain Easement, GRP, or HFRP

  Exception: Refunds of SIP and PIP are required.

- participants when CRP-1 was approved based on an erroneous ownership or operatorship determination as provided in paragraph 638, and CRP-1 is terminated because of the erroneous determination

- participants when CRP-1 was approved based on an erroneous land eligibility determination according to paragraph 638, and CRP-1 is terminated because of the erroneous determination

- participants when COC determines that CRP-1 shall be terminated, based on provisions in subparagraph 493 B

  Note: COC or CED shall clearly document in COC minutes that the costs of restoring the cover outweigh the benefits received from the restoration.
Requests for Waiver of Refunds

A Policy for Waivers of Refunds

COC and STC are authorized to waive refunds when the following apply:

- a request to waive refunds is received from participants, in writing

  Note: It is the producer’s responsibility to request a waiver of refunds.

- the total amount of refunds per contract, calculated according to paragraph 574 does not exceed:
  - $10,000, for COC authority to waive refunds
  - $50,000, for STC authority to waive refunds.

  Note: SED’s are authorized to waive refunds for equitable relief according to subparagraph D.

B COC Waivers of Refunds

COC shall:

- ensure that participants are provided appeal rights
- document requests for waivers in COC minutes
- submit requests for waivers in excess of $10,000 to STC or SED, as applicable
- not submit requests for waivers to STC or SED if COC does not recommend approval
- provide a report of waivers of refunds, no later than December 1 for each FY, according to subparagraph E.

*--Notes: COC may waive liquidated damages according to paragraph 578

COC may waive TIP liquidated damages according to subparagraph 812 C.--*
B  COC Waivers of Refunds

COC shall not waive any refund where the total refund due, as calculated according to paragraph 574, exceeds $10,000.

Example:  Producer A owes refunds due to the voluntary or involuntary removal of enrolled land from the CRP-1. The total refund due, including rental, incentive and cost share payments, interest and liquidated damages, equals $10,500. The COC shall not waive any of the refund because the total due exceeds $10,000. The COC may recommend a waiver to the STC. See paragraph 578 for the COC’s authority to waive liquidated damages.

COCs are responsible for maintaining program integrity and should not grant refund waivers simply because a producer requests it. In determining if a waiver should be granted, the COC should determine if the producer has made a good faith effort to comply with the program. Considerations should include:

- could the waiver be justified to other producers who continue to comply with the program and to taxpayers
- did the participant know or have reason to know that the action they took, or failed to take, could result in a violation of the contract and requirement to refund payments
- were there conditions beyond the participant’s control that contributed to requirement to refund benefits
- will the participant gain a financial benefit from their actions
- whether the participant provided all required information timely and honestly without any misrepresentation, concealment, or intention to evade any program compliance provision
- whether the participant brought the failure to FSA’s attention or if FSA learned of the program failure or discrepancy by other means
- if the failure was the result of oversight and not an intent of the participant to comply with only some of the program requirements
- the actual performance rendered by the participant toward compliance with the program’s requirements.
C STC Waivers of Refunds

*--STCs are responsible for maintaining program integrity and should not grant refund waivers simply because a producer requests it. In determining if a waiver should be granted, the STC should determine if the producer has made a good faith effort to comply with the program. Considerations are provided in subparagraph B. --*
Requests for Waiver of Refunds (Continued)

C STC Waivers of Refunds

STC shall:

- ensure that participants are provided appeal rights
- document requests for waivers in STC minutes
- provide a report of waivers of refunds for the previous FY, no later than December 1 each year, according to subparagraph E.

Notes: STC may waive liquidated damages according to paragraph 577.

*--STC may waive TIP liquidated damages according to subparagraph 812. *--*

D SED Waivers of Refunds for Equitable Relief

SED’s:

*--may approve requests for waivers of refunds because of termination of CRP-1 or CRP-1R when the total amount calculated according to paragraph 574 (all annual rental payments and C/S payments, plus interest applicable to both, and liquidated damages or TIP liquidated damages) is equal to or less than $20,000, according to equitable relief--*

provisions in 7-CP

Example: The total refund amount calculated according to paragraph 574 is $23,000. The producer requested a waiver of $20,000. Because the total calculated refund amount exceeds $20,000, SED must submit the request for waiver to DAFP if it recommends approval of the waiver.

Note: Sufficient documentation must be maintained when waivers are approved.
576 Requests for Waiver of Refunds (Continued)

D SED Waivers of Refunds for Equitable Relief (Continued)

- shall document requests for waivers of refunds

- shall submit all cases for waivers of refunds to DAFP for relief, when the total refund amount calculated according to subparagraph C exceeds $20,000

Note: The cases shall contain the following:

- copy of participant’s written request for relief

- copy of COC and STC minutes thoroughly documenting request and justification

- copy of all applicable forms and documents in the case file, including but not limited to CRP-1’s, CRP-2’s, CRP-2C’s, copy of aerial photocopies, conservation plans, land deeds, etc

- all documentation used by COC and STC during review

- narrative of the case in chronological order.

Note: Incomplete case files may delay response.

- shall not submit requests for waivers of refunds to DAFP if STC does not recommend approval.
E Report

*--STC’s and COC’s must provide a report to the State Office of all refunds waived during the previous FY. The report must include the following:*--*

- State and county code
- CRP participant name
- CRP contract number
- calculated refund amount
- amount waived
- reason waived.

State Offices must provide a compilation of the STC and COC reports to the CRP Program Manager no later than December 1 for each FY. The following is an example of the report.

<table>

A Determining Liquidated Damages Amounts

To determine the amount when assessing liquidated damages, multiply the number of acres being terminated times 25 percent times the annual rental rate.

B When to Assess Liquidated Damages

Before CRP-1 is approved, assess liquidated damages when the producer withdraws any offers after the offer is determined acceptable.

Exception: Liquidated damages shall not be assessed before CRP-1 is approved when the producer withdraws any request for CRP participation under the continuous signup provisions.

After CRP-1 is approved, COC shall assess liquidated damages if an original or revised CRP-1 is terminated.

*--Note: Assess liquidated damages for TIP CRP-1R according to Part 21.--*

C When Not to Assess Liquidated Damages

Do not assess liquidated damages if:

- CRP-1 participant is adversely affected by a person determination or by being determined not “actively engaged” according to 1-PL or 4-PL, as applicable, and withdraws from CRP-1

- CRP land is acquired under threat of condemnation or by eminent domain or acquired by an entity with the right of eminent domain, according to paragraph 572

- CRP land is under an existing lease for earth, oil, gas, or other mineral exploration before submission of CRP, and lessor exercises rights under the lease
Assessing Liquidated Damages (Continued)

C When Not to Assess Liquidated Damages (Continued)

- an estate does not succeed to CRP-1
- all signatures are not obtained after the offer is determined acceptable.

Note: If all signatures are not obtained after offer is determined acceptable, the offer is determined ineligible and CRP-1 shall not be approved.
A Request for Waiver

Determinations to waive liquidated damages shall be made on a case-by-case basis. CRP-1 termination does not automatically warrant waiving liquidated damages. When considering granting waivers, COC and STC shall consider:

- the future use of the terminated CRP acreage
- the circumstances in which the contract was terminated
- the agreement by the participant at time of enrollment to remove the acreage from production for the full term of CRP-1
- whether the acreage will be restored to production
- the effect the termination has on the participant.

COC may waive up to 50 percent of the assessed liquidated damages or recommend waiver of 100 percent to STC.

STC may approve requests to waive all liquidated damages.

Liquidated damages shall not be waived when COC or STC determines there was not a good faith effort to comply with the terms and conditions of CRP-1.

B Submitting Waiver Requests

COC shall submit fully documented requests to STC. Include the following when preparing requests:

- producer’s written request
- COC findings
- specific COC recommendations and basis for recommendation, including determination on whether liquidated damages shall be assessed
- copies of all program documents and other County Office records.
B Submitting Waiver Requests

See WA Exhibit 16 for required documentation when submitting requests for a waiver of liquidated damages. In particular, note any conditions beyond the producer’s control that may have impacted contract termination.
A Policy

CRP-1’s on land subsequently placed in State or Federal receivership, subject to RA’s concurrence:

- do not have to be terminated
- may continue to earn payments if CRP-1 terms and conditions are satisfied.

B Court-Appointed Receiver

A Receiver is appointed by the court to manage the assets of a landowner. However, the Receiver:

- shall not be a successor to CRP-1
- is not required to sign CRP-1.

Note: A court-appointed Receiver “stands in the shoes” of the landowner as the CRP participant.

Contacts about CRP-1 should be made with the Receiver.

C Continuing CRP-1 on Land in State or Federal Receivership

Do not revise CRP-1 until the land is sold to an eligible participant who agrees to continue CRP-1.

If land is subsequently sold and CRP-1:

- will be continued, follow paragraph 546 for revisions
- will not be continued, follow paragraph 571 for terminations.

D Issuing CRP Payments for Land in State or Federal Receivership

Payments shall, subject to RA concurrence, be:

- made to the eligible CRP participant, using the producer’s ID number
- mailed to the State or Federal Receiver.

Note: Do not make payments to the Receiver.
A Bankruptcy Policy

Because of the complexity of the U.S. Bankruptcy Code provisions:

- there are no established standard procedures regarding producers who have filed for protection under the bankruptcy law

- STC’s and COC’s shall, in all cases, determine program eligibility involving bankruptcy cases based on the advice of RA.

If CRP-1 is terminated because of bankruptcy, refunds are not required from any signatories on CRP-1.

B CRP-1 Considered Executory Contract

CRP-1’s are considered executory contracts.

CRP-1’s approved before filing a petition for bankruptcy shall be affirmed by the Trustee or Debtor in Possession:

- upon order of the court
- after notice and hearing as determined by RA.

Note: No payments shall be made under CRP-1’s, after filing the petition, until there is a court order agreed to by RA permitting assumption and an actual assumption.

C Chapter 7

When a producer files a Chapter 7 bankruptcy petition, the Trustee must obtain approval from the Bankruptcy Court within 60 calendar days of filing the bankruptcy petition to assume CRP-1. Otherwise, CRP-1 shall be terminated according to paragraph 571. Refunds, however, are not required.
**D Exception to Chapter 7**

If the Trustee does not affirm CRP-1 within 60 calendar days of filing the bankruptcy petition, CRP-1 may be reaffirmed with the debtor if:

- the parties elect to continue CRP-1 with FSA, waiving any breach deemed to have occurred by the lack of affirmation by the Trustee

- the debtor shows the property has been abandoned by the Trustee, leaving the debtor in a position to continue to comply with the terms and conditions for the full term of CRP-1

- agreeing to the reaffirmation will not compromise FSA’s or CCC’s interest

- RA agrees to defend the reaffirmation.

**Note:** A formal court approved reaffirmation will generally not be required.

**E Chapters 11 and 13**

Producers **must** also affirm or reject CRP-1’s under Chapters 11 and 13. However, there is no requirement to assume CRP-1 within 60 calendar days. The reorganization plan shall include an affirmation or rejection of CRP-1 when filed with the Bankruptcy Court.

**Note:** If the reorganization plan has not been filed, request guidance from RA about when CRP-1 would have to be assumed by the Debtor in Possession, his or her estate, or his or her Trustee.
B Annual Status Review

*--NRCS or TSP is required to conduct annual status reviews on contracts where the stand is not certified as established. The number of contracts NRCS/TSP should check equals 10% of the contracts approved in the prior fiscal year. The contracts selected for review do not have to be contracts approved in the prior fiscal year.

The COC, in consultation with the CED and local NRCS staff shall select the contracts to be reviewed. At the beginning of the calendar year, County Offices shall identify contracts on which the stand has not been certified as established. The primary focus should be on contracts that have been recently seeded or enhanced.

COC’s should use the following guidelines in selecting contracts for NRCS review. These guidelines are suggestions which COC’s and Service Center staff may modify or expand as determined appropriate. Any contracts up to the 10% requirement not selected using these criteria may be selected randomly.

- Identify contracts which have already experienced problems with stand establishment.
- Identify sites where it will be most difficult to establish a vegetative stand due to soils, precipitation or existing weed problems.
- Identify producers that are inexperienced in establishing vegetative CRP stands or who have had difficulties in the past.
- Limit the number of status reviews on the same contract to one unless additional reviews are determined necessary.--*
A Participant Responsibilities

All signatories on CRP-1 are jointly and severally responsible for complying with the term and conditions of CRP as stated on:

- CRP-1
- CRP-1 Appendix
- the approved conservation plan
- any other CRP forms.

**Exception:** Only signatories that receive a share of the payment are responsible for compliance.

B Annual Status Review

NRCS or TSP will complete a status review with the participant and a COC representative, if available, on up to 10 percent of all CRP-1’s before the end of each FY until all practices in the plan are applied and the approved cover is established. The 10 percent required will be based on the total number of CRP-1’s approved in the previous FY. Vegetative and tree cover establishments are reported to FSA by a status review labeled “Final.”

**Note:** FSA and NRCS or TSP shall work together to prioritize and select the contracts and practices on which to complete an annual status review.

The State Forestry Agency will provide NRCS or TSP with 2 listings by name and CRP-1 number for contracts having tree plantings that:

- do not have adequate tree cover established or require replanting
- have established adequate tree cover and have not been reported as established
- have not been thinned according to the conservation plan.

**Note:** Certain participants agreed to thin tree stands to receive additional environmental benefits index points when the acreage was offered for enrollment.

NRCS or TSP will provide a copy of this list to FSA indicating “Final Status Review” for these CRP-1’s.
601 General Provisions (Continued)

B Annual Status Review (Continued)

Progress of the practice establishment shall be documented, including:

- implementation of the approved conservation plan, including tree thinning, if applicable
- condition of installed practices
- need for revisions
- additional assistance.

NRCS or TSP shall use:

- NRCS-LTP-013, or its related electronic form, for required status reviews
- NRCS-LTP-03, or its related electronic form, to document completion of the annual status review.

NRCS or TSP will provide COC signed copies of the annual status reviews and the following information, if applicable:

- the reason why the practices have not been established
- why the practice does not meet the design standards and specifications
- what action must be taken for the practice to meet the standards and specifications
- the estimated time it will take to meet the standards and specifications.
C FSA County Office Action

FSA County Offices shall:

- file the annual status review copies in CRP folders
- follow up on noncompliance cases
- conduct annual spot checks according to 2-CP after NRCS or TSP certifies on a final status review that the practice is established
- conduct annual spot checks on at least 10 percent of CRP-1’s, including CREP, approved for:
  - spot treatment during the primary nesting or brood rearing season according to paragraph 427
  - early land preparation according to paragraph 637

If NRCS or TSP certifies that a practice has not been established in the final performance review, COC shall determine necessary action. Action may include, but is not limited to:

- terminating CRP-1 according to paragraph 571
- determining that erosion is being controlled adequately with existing cover according to subparagraph 603 D
- participant working with NRCS or TSP to establish an approved cover.
A Certification of Compliance

Before CRP annual rental payments are issued, a certification of compliance shall be filed on either FSA-578 or CRP-817U by 1 of the following:

- owner on CRP-1
- operator on CRP-1
- person authorized by power of attorney.

Notes: See subparagraph B for completing CRP-817U.

Substitute forms are not authorized. State and County Offices shall not develop substitute forms for FSA-578 or CRP-817U.

A current AD-1026 and applicable payment limitation forms shall be on file for all participants earning CRP benefits before CRP annual rental payments are issued.

At least 15 calendar days before the end of the reporting period, COC shall notify each CRP participant to file FSA-578 or return CRP-817U.
B  Completing CRP-817U

County Offices shall complete CRP-817U according to the following.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Enter FSN in item 1.</td>
</tr>
</tbody>
</table>
| 2    | Enter CRP-1 number in item 2.  
**Note:** Use one CRP-817U for each CRP-1. |
| 3    | Enter the program year for the certification in item 3. Do not enter the CRP-1 year. |
| 4    | Enter applicable CRP practices and the associated number of acres in item 4. |
| 5    | Provide a deadline for returning CRP-817U to the County Office. |
| 6    | Mail CRP-817U to CRP participant. |
| 7    | When the participant returns CRP-817U:  
  • ensure that participant signed and dated CRP-817U in item 5  
  • update the following in the System 36:  
    • FSA-578 according to 2-CP  
    • eligibility flags according to 6-CP and 2-PL. |
602 Certifying Compliance (Continued)

C Example of CRP-817U

The following is an example of CRP-817U:

![CRP-817U Example]

Dear Producer:

Our records indicate that all of the following applied to you in the previous year:

1. That all or a portion of the land of your farm was enrolled in the Conservation Reserve Program (CRP).

2. That you certified compliance with Highly Erodible Land Conservation and Wetland Conservation provisions and have approved farm operating plan for payment eligibility review (form CCC-502) or CCC-902 as applicable.

If the above statements remain true for the current year, please sign and date the CRP-817U and return it to this office by ______________ so your CRP rental payment may be processed.

| IMPORTANT INFORMATION -- PLEASE READ AND RETURN BY DATE SPECIFIED SHOWN ABOVE |
|-----------------|-----------------|-----------------|
| 1. Farm Number  | 2. CRP Contract No. | 3. Program Year of Certification |

I hereby certify that: (1) the information shown above is correct; (2) I have and will continue to comply with ALL the terms and conditions of the indicated CRP contract, including the applicable appendix and any addenda; (5) I am in compliance with ALL Highly Erodible Land Conservation (HEL-C) and Wetland Conservation (WC) provisions set forth in 7 CFR Part 12; (4) I have filed an approved farm operating plan for payment eligibility review (form CCC-502 or CCC-902, as applicable), in accordance with 7 CFR Part 1400 and there have been no changes in my farming operation; and (5) USDA representatives are authorized to enter upon and inspect the farm indicated above for the purpose of confirming this certification.

Contact this office immediately if any information shown is incorrect or if farming interests identified on the farm operating plan referred to above have changed.

5A. Producer's Signature (By)  5B. Title/Relationship of the Individual Signing in the Representative Capacity  5C. Date

NOTE: The information collection is made in accordance with the Privacy Act of 1974 (5 U.S.C. 552a, as amended). The authority for requesting the information identified on this form is 7 CFR Part 1400, the Food Security Act of 1985 (16 U.S.C. 3331 et seq.), the Commodity Credit Corporation Charter Act (15 U.S.C. 714 et seq.), and the Food, Conservation, and Energy Act of 2008 (Pub. L. 110-236). This information will be used to verify compliance with all terms and conditions indicated on the CRP contract. The information will be released to the public as required by 7 CFR Part 1400. The information is collected or retained for the purpose of scientific research or for statistical or aggregate purposes as described in the System of Records Notice identified as USDA/CRS-62, Farm Records File, and will be used to determine eligibility for CRP payments.

The following statement is made in accordance with the Privacy Act of 1974 (5 U.S.C. 552a, as amended). The authority for requesting the information identified on this form is 7 CFR Part 1400, the Food Security Act of 1985 (16 U.S.C. 3331 et seq.), the Commodity Credit Corporation Charter Act (15 U.S.C. 714 et seq.), and the Food, Conservation, and Energy Act of 2008 (Pub. L. 110-236). This information will be used to verify compliance with all terms and conditions indicated on the CRP contract which will prevent the processing of the CRP payment. The information collected is exempted from the Paperwork Reduction Act, as it is required for the administration of the Food Security and Conservation, and Energy Act of 2008 (Pub. L. 110-236). The information is collected or retained for the purpose of scientific research or for statistical or aggregate purposes as described in the System of Records Notice identified as USDA/CRS-62, Farm Records File, and will be used to determine eligibility for CRP payments.

The information collection is exempted from the Paperwork Reduction Act, as it is required for the administration of the Food Security and Conservation, and Energy Act of 2008 (Pub. L. 110-236). The information is collected or retained for the purpose of scientific research or for statistical or aggregate purposes as described in the System of Records Notice identified as USDA/CRS-62, Farm Records File, and will be used to determine eligibility for CRP payments.
A Noncompliance Cases

Notify participant in writing of noncompliance issue according to 4-CP.

Noncompliance cases shall be handled promptly before CRP payments are made for the year.

COC shall determine whether a participant who is in violation of CRP-1 terms and conditions:

- made a good faith effort to comply
- did not make a good faith effort to comply.

B Examples of Noncompliance

COC shall consider a producer to be out of compliance if:

- the approved cover has been harvested or grazed or other commercial use has been made of the forage
  
  **Exception:** Managed harvesting, routine grazing, or emergency haying or grazing, as authorized.

- an unauthorized crop, such as an agricultural commodity, has been planted on acreage under CRP-1

- trees have been harvested or sold, or other commercial use has been made of trees, including the shearing or shaping of trees for Christmas trees or removal of pine straw
  
  **Exception:** Customary forestry activities are authorized.

- producer conducted an activity on CRP acres without authorization, including unauthorized treatment, such as mowing, spraying, and burning of CRP during the primary nesting or brood rearing season

- the State or local noxious weed commission determines that the participant is violating noxious weed provisions and notifies COC that the noxious weeds are not controlled on the designated acres

- the approved cover has not been maintained according to the conservation plan
603 Noncompliance (Continued)

B Examples of Noncompliance (Continued)

- the producer has not performed required management activities according to the conservation plan
- other undesirable weeds, plants, insects, or pests, as determined by COC, are not controlled on the designated acreage
- a satisfactory cover or a required practice has not been established or re-established within the time prescribed
- the producer has not complied with landlord and tenant provisions
- there has been a scheme or device that tends to defeat the program
- a false claim has been filed
- a violation of the terms and conditions of CRP-1 has occurred.

C Joint and Several Liability

If the farm is in violation of CRP-1 terms and conditions, all signatories to CRP-1 are jointly and severally liable for any payment reduction or refunds that may become due to CCC because of noncompliance.

CRP participants with zero interest in the annual rental payment are not responsible for contract compliance.

D Participant’s Good Faith Effort

If COC determines that the participant made a good faith effort to comply with the terms and conditions of CRP-1 and:

- a practice failed because of natural disaster or through no fault of the participant, do not use this subparagraph

Note: See subparagraph 493 B.
D Participant’s Good Faith Effort (Continued)

- noncompliance has occurred for reasons other than a practice failing because of natural disaster or through no fault of the participant, COC shall:
  - assess a standard payment reduction on the affected acres not to exceed the annual rental payments for CRP-1 on which the violation occurred

  **Note:** See subparagraph 604 A.

  - advise the participant that subsequent violations may result in terminating CRP-1.

If noncompliance because of practice failure occurs after the fifth year of CRP-1, COC may determine whether CRP-1 shall be:

- continued without additional C/S, if a permanent cover has failed and adequate cover exists to prevent erosion

  **Note:** Adequate cover to prevent soil erosion does not satisfy tree planting requirements.

  - terminated according to paragraph 571

When determining whether to terminate CRP-1, COC shall consider factors, such as the age of CRP-1 and the cost-effectiveness of re-establishing the practice.

**Example:** COC terminates CRP-1 because, in the eighth year of CRP-1, the producer inadvertently applied a herbicide that killed all ground cover.
Noncompliance (Continued)

E Good Faith Effort Not Determined

If COC determines there was not a good faith effort to comply with the terms and conditions of CRP-1 and:

- the participant’s request for termination of part of the land under CRP-1 was not approved, COC shall terminate all land under CRP-1 according to subparagraph 571 A.

**Example:** Participant has 100 acres enrolled in CRP. Participant requests to terminate part of the acres under CRP-1 to return to crop production. The request is not approved. Producer plants part of the acres under CRP-1 to corn. COC shall terminate all land (100 acres) under CRP-1.

- there was no request to terminate part of the land under CRP-1, COC shall terminate only land in violation according to subparagraph 571 B.

COC must determine there is not a good faith effort to comply with the terms and conditions of CRP-1 if:

- unauthorized grazing is discovered and producer refuses to remove livestock from CRP acreage

- unauthorized haying is discovered and producer refuses to destroy or donate the hay

**Note:** If the unauthorized hay has already been sold or used by the time the violation is discovered, COC may determine the producer made a good faith effort to comply with the terms and conditions of CRP-1. Burning is not an authorized method for destruction of the hay. Donation must be to a third-party.

- unauthorized planting or harvesting of a crop is discovered and producer refuses to destroy the crop.

**Note:** If the unauthorized crop has already been sold or used by the time the violation is discovered, COC may determine the producer made a good faith effort to comply with the terms and conditions of CRP-1.
A Assessment of Payment Reduction

The participant shall be assessed payment reductions as follows:

• according to 4-CP for maintenance defaults and unauthorized haying or grazing

   Notes: To ensure equity in payment reduction for unauthorized grazing only, COC may:

   • pre-establish payment reduction rates
   • prorate the payment reduction based on the days, weeks, or months the violation occurred.

   See subparagraph 603 E if producer refuses to remove livestock or destroy hay.

• for unauthorized planting or harvesting of a crop, such as annually tilled crops, pine straw, etc., acres in default times current market value times the lesser of the following:

   • established yield for the crop times 2
   • actual yield for the crop times 2

   Note: See subparagraph E if producer refuses to destroy unauthorized crop.

• for unauthorized treatment, such as mowing, spraying, and burning, during the primary nesting or brood rearing season, an amount equal to the annual rental payment for the acreage in violation.

Standard payment reductions shall not exceed the annual rental payments for CRP-1 on which the violation occurred.

When the violation results in termination of acres in violation, participants shall refund payments, according to paragraph 571.
A Waiver or Reduction of Standard Payment Reduction

COC shall:

- authorize a waiver or reduction of the standard payment reduction only if the request is received from participants, in writing

  Note: It is the participant’s responsibility to request a waiver or reduction of refunds.

- ensure that participants are provided applicable appeal rights according to 1-APP

- thoroughly document requests for waiver or reduction of standard payment reduction refunds in COC minutes

- submit requests for waiver or reduction of standard payment reduction to STC only if COC determines that the action is justified based on documented and verifiable facts of the individual case

- provide a report of waivers or reductions of the standard payment reduction, no later than December 1 for each FY according to subparagraph B.

Note: Each case is unique. Determinations shall be made on a case-by-case basis based on the facts of the individual case.

COC’s may waive up to 50 percent of the assessed standard payment reduction.

STC shall:

- thoroughly review each request for waiver or reduction of standard payment reduction

- thoroughly document requests for waiver or reduction of standard payment reduction in STC minutes

- provide a report of waivers or reductions of standard payment reduction, no later than December 1 for each FY according to subparagraph B.

Note: Each case is unique. Determinations shall be made on a case-by-case basis based on the facts of the individual case.

STC’s may waive up to 100 percent of the assessed standard payment reduction.
B Reports

STC’s and COC’s must provide a report to the State Office of all waivers of the standard payment reduction during the previous FY. The report must include the following:

- State and county code
- CRP participant name
- CRP contract number
- calculated standard payment reduction amount
- amount waived
- reason waived.

*--State Offices must provide a compilation of the STC and COC reports to the CRP program manager no later than December 1 each year.--*

The following is an example of the report.

606-625  (Reserved)
A CRP-1 Harvesting Restrictions

No crops of any kind may be harvested from the designated CRP acreage during the CRP-1 period.

Exceptions: Incidental harvest of natural products, such as wild game, fish, native berries, etc., from CRP acreage may be permitted if all of the following are met:

- they do not increase supplies of feed for domestic animals
- the participant receives no economic benefit
- there is no commercial use of the products.

Note: This exception does not include pine straw. See Part 19 for managed haying provisions.

Conservation plan shall not be modified for this purpose.
A CRP-1 Customary Forestry Activities on CRP Acreage

Activities consistent with customary forestry practice, such as pruning, thinning, or timber stand improvement, are allowed. C/S is authorized.

*--Subject to COC or CED approval, CRP participants may make commercial use of forest refuse resulting from customary forestry activities, such as pruning, thinning, or timber improvement, the participant must agree to:

- protect the area from erosion by establishing an adequate cover best suited for wildlife in the area

- perform prescribed burn or otherwise treat the forest refuse from thinning or other customary forestry activities on CRP acreage to improve resource condition of the land and enhance wildlife habitat and reduce the spread of insects and disease.

Example: CRP acreage, including open areas established for wildlife, shall not be used to dump, pile, or leave forest refuse resulting from forestry activity or creation of open areas.

Customary forestry activities, such as pruning, thinning, or timber improvement may be conducted anytime, including during the primary nesting or brood rearing season. The removal or harvest of pine straw is prohibited at all times.
Using CRP Acres as Turn Rows

A Using CRP Acres as Turn Rows or Crossing Areas

Limited use of field margins and areas within a field enrolled in CRP is authorized during the primary nesting or brood rearing season only if this activity is conducted as part of the planting, cultivating, or harvesting of a crop in an adjoining field. Use of this acreage shall be:

- limited to turning or crossing areas
- minimal, as determined by STC.

Note: Areas within a field include, but are not limited to:

- waterways
- contour grass strips
- terraces.

CRP acreage shall not be used as a lane or road under any circumstances.

Water as Cover

A Water as Eligible Cover

CRP-1 may be continued on land that is under water because of natural causes or as a result of a flood control structure if the participant agrees to all of the following:

- replace the permanent vegetative cover on CRP acres if the water recedes
- not use the impounded water for irrigation water for producing agricultural commodities
- obtain a modified conservation plan from NRCS or TSP that includes the eligible uses that can be made of the acres under water.

Ponds are eligible cover on CRP if they are installed according to subparagraph 429 A.
A When Easements Are Placed on CRP Land

Land enrolled in CRP that is not encumbered by a CRP useful life easement and is subsequently encumbered by other conservation easements, except for WRP or EWP Floodplain Easements, may continue to earn CRP payments under CRP-1 if the:

- participant continues to comply with CRP provisions
- Agency certifies, in writing, that the:
  - Agency was aware of the existence of CRP-1 at the time the participant agreed to encumber the land
  - participant will be able to comply with CRP provisions.

Notes: Land encumbered by certain conservation easements, such as those placed by FWS and FLP Debt for Nature, is ineligible for subsequent enrollment and contract extension in CRP.

*--See paragraph 554 for transferring land from CRP to WRP, FRPP, GRP, HFRP,--* and EWP Floodplain Easements.
A Public Use of CRP Land Guidelines

The following is the procedure for continuing CRP-1 on land temporarily being used by public utilities for installing gas lines, pipes, cable, telephone poles, etc., materials used by an entity of the State for road building or Federally funded pipeline projects.

CRP-1’s may be continued without reduction in payment if:

- the participant gives COC or CED details of proposed temporary use, including length of use
- COC authorizes the use

**Note:** Use is **not** authorized during the primary nesting season.

- NRCS or TSP certifies usage will have minimal effect, such as:
  - erosion is kept to a minimum
  - minimum effect on wildlife and wildlife habitat
  - minimum effect on water and air quality

- the participant restores cover, at the participant’s expense, to disturbed land in timeframe set by COC or CED.

**Note:** No payment reduction will be made for compensation received by the participant from the public agency.

NRCS or TSP will determine whether the disturbance will have an adverse effect on the land. If NRCS or TSP determines that public use will have an adverse effect on CRP acreage, affected acreage shall be terminated and refunds assessed.

632 Carbon Sequestration Credits

A Selling Carbon Sequestration Credits

CRP participants may sell carbon sequestration credits associated with land enrolled in CRP. Selling carbon sequestration credits is not considered commercial use and is not, therefore, a violation of CRP-1.
633     Recreational Hunting and Commercial Shooting Preserves on CRP Acreage

A     Recreational Hunting

CRP participants may lease hunting rights, charge fees for access to hunters, or conduct other similar hunting operations on CRP acreage if this activity occurs during the normal hunting season for the pursuit of game that is normal to the area. Hunting must be conducted consistent with State laws and bag limits for the appropriate game species.

* * *

Important: Barrier fencing or boundary limitations that prohibit wildlife access to or from the CRP acreage is not allowed.

B     Commercial Shooting Preserves

Commercial shooting preserves may be operated on CRP acreage if all of the following apply:

- the commercial shooting preserve is licensed by a State agency, such as the State Fish and Wildlife Agency or State Department of Natural Resources
- the commercial shooting preserve is operated in a manner consistent with the applicable State agency rules governing commercial shooting preserves
- CRP cover is maintained according to the conservation plan
- no barrier fencing or boundary limitations exist that prohibit wildlife access to or from the CRP acreage
- related CRP cover maintenance, as determined by STC according to FOTG and in consultation with the State Technical Committee, must:
  - be performed according to the conservation plan
  - provide benefit and enhancement to all wildlife normal to the area
B Commercial Shooting Preserves (Continued)

- be conducted outside the primary nesting or brood rearing season
- not adversely impact the CRP cover
- not degrade wildlife habitat benefits, water quality benefits, or erosion control measures.

**Important:** STC, in consultation with the State Technical Committee, **must** determine the extent and method of cover maintenance acceptable for all CRP acreage within the State that provides enhancement for all wildlife habitats.

C Mowing of CRP Cover

As provided in paragraph 427, periodic mowing and mowing for cosmetic purposes is prohibited at all times. Annual mowing of CRP for weed control is prohibited. Mowing of CRP cover, not to exceed 20 percent of the total CRP acres in a field, is permitted. This activity **must** be:

- included in the conservation plan
- part of a State-approved management plan for habitat maintenance and wildlife and land management
- conducted outside the primary nesting or brood rearing season.

**Note:** The location of this mowing should be changed from year to year.

Until a final status review has been completed by NRCS, TSP, or self certified by the producer, COC or CED, in consultation with NRCS, may allow participants to spray and mow the acreage under contract at any time, if this activity is required in the conservation plan to establish the approved cover.
A Authorized Uses of CRP Acreage

COC may determine authorized uses of CRP acreage on a case-by-case basis during the life of CRP-1, except during the primary nesting or brood rearing season, if the use is not otherwise prohibited in procedure.

**Example:** COC may authorize using CRP acreage for a parking lot for a special event or as a camp site on a limited basis. COC has no authority to authorize the harvesting of forage or trees.

Each request shall be documented in COC minutes with justification for actions taken. Inspection fees or payment reductions may be assessed as determined by COC.

B Beehives on CRP

Consistent with the soil, water, and wildlife goals of CRP, beehives may be stored on CRP acreage.
Authorized Use

A Authorized Uses of CRP Acreage

Cell Telephone Towers

The STC has established the following policy concerning the placement of cellular telephone towers on land enrolled in CRP:

COC may authorize the installation of cellular telephone towers on CRP acreage on a case-by-case basis. COC may approve up to 5.0 acres of cellular telephone towers provided the towers have minimal impact on the contract’s cover or wildlife. This policy mirrors the policy in paragraph 639 concerning the installation of wind turbines on CRP land.

Notes: The acreage covered by the telephone tower includes the structure, any supporting structures such as cables, and any area that will be impacted by maintenance activities.

Any acreage associated with the cellular tower that is devoted to roads or ancillary equipment must be removed from CRP and refunds paid.

A CPA-052 or FSA-850 must be completed to document the environmental review completed before approval of the cell tower installation.

Motocross and Other Racing Tracks

Paragraph 4 A (6) of the CRP-1 Appendix provides that CRP participants agree “not to undertake any action on land under the participant's control which tends to defeat the purposes of this contract, as determined by CCC.” The STC has determined that any form of race track is extremely disruptive to wildlife. COCs shall not permit the partial withdrawal of acreage from CRP if the land will be used for a race track, motocross track or any similar *--land use. COCs also shall not approve the enrollment of land around an existing or--* intended race track or similar land use.
A Application Requirements for Sludge and Agriculture By-Products

COC’s may permit the application of sludge or an agricultural by-product on land under CRP-1 if:

- FSA-850 does not reveal any adverse impacts to the human environment that cannot be successfully mitigated
- the participant has sought approval to apply the waste and the waste has been approved, or is not prohibited, by any State or local water quality agency with jurisdiction over the area of application

Note: COC shall consult with State or local water quality agencies on an as needed basis to ensure proper application of the materials.

- all requirements and specifications are met as required by EPA and State and local regulatory authorities that provide oversight for air quality and water quality
- a current soil and waste test analysis that is conducted by a State-approved laboratory determines the nutrient level for the nitrogen, phosphorus, and potassium of the waste and the amount of material to be applied per acre
- the waste will be applied by injection
- the amount of nutrients applied are limited to the level that can be used by the vegetative cover
- the waste is free of toxic elements, or does not contain amounts of toxic elements that could build up over a period of time to a level injurious to animals and humans
- all required State or local permits for applying the waste to agricultural land are obtained by parties responsible for applying the material
- the approved conservation plan is modified to include the entire area or field that will be treated
- the waste will not be applied within 100 feet of property boundaries or water sources, such as wells, streams, rivers, wetlands, or swamps
- the waste will be applied when the wind direction allows minimal odor detection by neighbors and the humidity level is low.
B Application Requirements for Animal Waste

*--COC’s or CED’s may permit the application of animal waste, sludge, or agricultural by-product on CRP acreage if NRCS or TSP provides, in writing, that the conservation plan developed meets or exceeds the minimum standards of FOTG. The approved conservation plan shall be modified to include the application of animal waste, sludge, or agricultural by-product.

Note: Soil contaminated with petroleum products or hazardous waste will not be allowed for application on CRP acres.

C Application Restrictions

The amount applied shall not exceed the:

• permitted application rate as determined by the soil and waste test analyses for animal waste, sludge, or agricultural by-products

• quantity specified in the modified conservation plan as determined by NRCS for animal waste, sludge, or agricultural by-products.

The participant must agree to re-establish, at the CRP participant’s expense, the vegetative cover in the event of failure after application.

The timing of each application should minimize adverse impacts to:

• air quality, including odor
• water quality
• wildlife
• environment
• endangered species.

Note: CRP cover shall not be disturbed during the primary nesting or brood rearing season, as determined by STC in consultation with the State Technical Committee.
D Participant Responsibility

During and after application of the waste at their own expense, CRP participants shall:

- ensure that erosion is controlled
- re-establish and maintain the disturbed cover for the life of CRP-1.

E Payment Reduction

If producer receives compensation for the use of CRP acres, the annual rental payment shall be reduced by the amount of compensation the producer receives.
A Research Project Applications

State FSA Offices shall notify, in writing:

- each land grant institution within the State that STC shall:
  - review and evaluate applications based on the criteria in subparagraph 636 G
  - ensure that each proposal submitted has been reviewed for relevance and scientific soundness by an independent review committee, such as the State Technical Committee

- Director, CEPD of approved projects within 30 calendar days of project approval. Documentation shall include:
  - description of project
  - number of acres being used
  - expected completion date.

STC may approve up to 5 recommended projects, including projects DAFP previously approved. When considering projects for approval, STC shall avoid approving duplicative projects.

B Recordkeeping

Ensure that a file containing the following is maintained according to 25-AS:

- all land grant institutions notified according to subparagraph A
- all research projects submitted for consideration regardless of whether the project was recommended for DAFP approval.

C Annual Reporting Requirement

State FSA Offices with approved CRP research projects shall annually submit, as a memorandum, Status of CRP Research Project Report (CEP-58R) to Director, CEPD. At a minimum, CEP-58R shall include:

- information regarding the progress of project
- anticipated completion date.
D Project Proposal Requirements

CRP research project proposals submitted to STC for rating and evaluation shall include a:

- brief summary of the proposed research project
- formal research proposal.

E Project Title

Include “(State) CRP Research Project Proposal” in the title of the research project.

F Background Statement

The background statement in the proposal shall describe the following:

- the conservation or land use problem being addressed
- demographic information, such as number of CRP acres, size of farm units, and number of producers
- conservation and agronomic conditions
- water quality program efforts that exist in the research area, if applicable
- what the problem is, in a concise manner.
G Project Objectives

The proposal shall include the research project, and:

- clearly describe what will be accomplished during the research period
- relate to the problem identified in the background statement
- describe what is planned during the research.

The proposed research project shall:

- include objectives that are consistent with CRP purposes
- provide beneficial information on the economically and environmentally sound agriculture practices
- not adversely affect local agricultural markets
- include adequate funding for completing the project from sources other than FSA or CCC
- be conducted and monitored by a bona fide research entity, such as a land grant institution
- be conducted on no more than 640 CRP acres per project.

H Project Research Activities

The procedure section shall describe research activities that will:

- be implemented to accomplish the objectives in subparagraph G
- be organized to reflect a logical sequence of events and activities
- identify dates, time schedules, and deadlines
- define roles of respective agencies
- include a plan for marketing and promoting the project, including public participation.
A General Policy for Fall-Seeded Crops

Beginning July 1 of the final year of CRP-1, CRP cover may be destroyed on certain acreage before CRP-1 expiration to prepare a seedbed for fall-seeded crops.

This provision requires that participants:

• obtain an approved conservation plan for the destruction of the cover from NRCS or TSP when the method of destruction could cause adverse environmental affects, as determined by NRCS or TSP

• obtain an approved conservation plan for conservation compliance, if applicable

• not be assessed a payment reduction

• submit requests to start this activity according to this paragraph.

Note: See subparagraph:

• D for acreage ineligible for early land preparation
• E for participants’ responsibilities.

B General Policy for Spring-Seeded Crops

In the final year of CRP-1, participants are permitted to apply chemicals to prepare certain CRP acreage for spring-seeded crops after the primary nesting season. Destruction of the CRP cover by any other means is not permitted. Seedbed preparation is not permitted before CRP-1 expires.

Notes: Participants may mow CRP acreage before applying chemicals to prepare CRP acreage for spring-seeded crops, if the mowing is conducted outside the primary nesting or brood rearing season.

Participants shall not hay, graze, or otherwise make commercial use of CRP acreage in preparing the acreage for spraying.
A General Policy for Fall-Seeded Crops

*--COC’s shall not approve burning of CRP in the last year of the contract prior to the dates provided in this paragraph (May 1 or July 1) for land that will be planted to fall-seeded crops.

B General Policy for Spring-Seeded Crops

COC’s shall not approve burning of CRP in the last year of the contract for land that will be planted to spring-seeded crops.

Note: For land where the CRP cover will be maintained, but the land will not be re-enrolled in CRP, burning shall not be approved in the final year of the contract.--*
B General Policy for Spring-Seeded Crops (Continued)

This provision requires that participants:

- obtain an approved conservation plan for the application of the chemicals from NRCS or TSP when the method of destruction could cause adverse environmental affects, as determined by NRCS or TSP
- obtain an approved conservation plan for conservation compliance, if applicable
- not be assessed a payment reduction
- submit requests to start this activity according to this paragraph.

Note: See subparagraph:

- D for acreage ineligible for early land preparation
- E for participants’ responsibilities.

C Early Land Preparation for Fall Seeded Crops - Arid Areas

In the final year of CRP-1, participants in arid areas may destroy CRP cover on certain acreage beginning May 1 if maintaining CRP cover through June 30 could inhibit normal planting of a fall-seeded crop. This special provision for participants in eligible arid areas requires that participants:

- obtain an approved conservation plan for the destruction of the cover from NRCS or TSP when the method of destruction could cause adverse environmental affects, as determined by NRCS or TSP
- obtain an approved conservation plan for conservation compliance, if applicable
- submit requests to destroy CRP cover before July 1 according to this paragraph.
Destroying CRP Cover Before CRP-1 Expiration (Continued)

C Early Land Preparation Early Land Preparation for Fall Seeded Crops - Arid Areas (Continued)

- be assessed a payment reduction to exclude payment for the period indicated on CRP 1G Addendum, item 3.

Notes: Arid areas are defined as acreage located west of the 100th meridian that receives less than 25 inches of annual precipitation.

See subparagraph:

- D for acreage ineligible for early land preparation
- E for participants’ responsibilities.

D Acreage Ineligible for Early Land Preparation

All CRP cover may be destroyed in the final year of CRP-1 for early land preparation, according to subparagraph A, B, or C, as applicable, except for acreage that is:

- devoted to the following practices:
  - practices on which a useful life easement is filed
  - located within an average width 120 feet of a stream or other permanent waterbody to ensure continued habitat for wildlife
  - considered a wetland by NRCS
  - required to serve as a wetland buffer according to the practice standard in FOTG to protect the functions and values of a wetland
  - located within an EPA-designated wellhead protection area
  - subject to frequent flooding, as determined by NRCS or TSP.
Determine participants’ responsibilities according to the following.

**Note:** Measurement service is available at the participant’s expense for requests to prepare only a portion of the acres under contract.

<table>
<thead>
<tr>
<th>WHEN participants, in the final year of CRP-1, intend to destroy CRP cover to...</th>
<th>THEN participants...</th>
</tr>
</thead>
</table>
| prepare for spring seeded crops | • shall submit requests on CRP-1G Addendum at any time during the final year of CRP-1  
  • are required to meet with NRCS or TSP to obtain an approved conservation plan for:  
    • the chemical destruction of the CRP cover when the method of destruction could cause adverse environmental effects, as determined by NRCS or TSP  
    • conservation compliance, if applicable  
  • shall not prepare a seedbed for planting before CRP-1 expires  
  • shall not hay, graze, or otherwise make commercial use of CRP acreage during the CRP-1 period. |

**Notes:** Participants may mechanically remove cover from CRP acreage; however, no commercial use can be made of the forage. The participant must pay for a field visit by COC or CED to verify destruction of the cover. * * *

All signatories to CRP-1 shall be required to sign CRP 1G Addendum before COC or CED approval.

No payment reduction shall be assessed.

</tr>
<tr>
<td></td>
<td>- conservation compliance, if applicable</td>
</tr>
<tr>
<td></td>
<td>- may plant fall-seeded agricultural commodities in areas where planting these crops normally occurs before October 1, as determined by STC</td>
</tr>
<tr>
<td></td>
<td>- may mechanically remove cover and make commercial use of CRP acreage during the CRP-1 period with a 25 percent reduction of the annual rental payment</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Participants may mechanically remove cover from CRP acreage without a reduction of the annual rental payment if no commercial use is made of the forage. The participant <strong>must</strong> pay for a field visit by COC or CED to verify destruction of the cover. *****</td>
</tr>
<tr>
<td></td>
<td>- shall receive a reduced annual rental payment for the period indicated on CRP-1G Addendum, item 3</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> See subparagraph F.</td>
</tr>
<tr>
<td></td>
<td>- shall be in violation of CRP-1 if the participants fail to plant a fall seeded crop in a normal manner.</td>
</tr>
<tr>
<td><strong>Notes:</strong> All signatories to CRP-1 shall be required to sign CRP-1G Addendum before COC or CED approval.</td>
<td>CRP participants requesting to destroy CRP cover to prepare land for planting fall-seeded crops shall be informed that failure to plant a fall-seeded crop in a normal manner is a violation of CRP-1 and may result in a refund of all CRP annual rental payments, plus interest, and liquidated damages.</td>
</tr>
</tbody>
</table>
F Processing Participants’ Requests

County Offices shall process participants’ requests for early land preparation according to the following.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Accept requests on CRP-1G Addendum. See subparagraph G. Ensure that all required signatures are obtained.</td>
</tr>
</tbody>
</table>
| 2    | Ensure that participants meet with NRCS or TSP to develop a conservation plan for:  
  - the destruction of the CRP cover when the method of destruction could cause adverse environmental effects, as determined by NRCS or TSP  
  - conservation compliance, if applicable. |
| 3    | Remind participants that approval is for land preparation activities only. However, planting fall-seeded agricultural commodities is permitted when fall planting of these crops normally occurs before October 1, as determined by STC.  
  **Note:** Unauthorized haying and grazing during the contract period are violations of CRP-1. |
| 4    | Ensure that participants are aware that no annual rental payment shall be earned for the period indicated on CRP-1G Addendum, item 3. Nonpayment period shall begin on the day land preparation commences, but:  
  - *no earlier than May 1-*  
  - ends June 30.  
  Enter “N/A” on CRP-1G Addendum, item 3 for requests that do not require a payment reduction.  
  **Note:** The nonpayment period may be for a portion of a month. The payment reduction shall be based on the number of nonpayment days entered on CRP-1G Addendum, item 3. |
## F Processing Participants’ Requests (Continued)

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
</table>
| 5    | Ensure that participants are aware that failure to plant a fall-seeded crop after acreage has been destroyed for such use:  
  - is a violation of CRP-1  
  - may result in a refund of all CRP annual rental payments, plus interest, and liquidated damages. |
| 6    | Attach a copy of an aerial photograph to CRP-1G Addendum. Highlight the acreage on which the cover will be destroyed. |
| 7    | Provide each participant and NRCS or TSP with a:  
  - copy of approved CRP-1G Addendum  
  - a photocopy highlighting the acreage on which the cover will be destroyed. |
| 8    | File CRP-1G Addendum and attached photocopy in the CRP-1 folder. |
| 9    | Immediately approve requests received on eligible acreage. |
| 10   | During the normal payment cycle, after October 1, prorate the final payment to exclude payment for the nonpayment period identified on CRP-1G Addendum, item 3. |

**Note:** Participants who want to apply chemicals to prepare eligible CRP acreage for spring seeded crops or destroy eligible CRP cover for planting fall-seeded crops after June 30 will not be assessed a payment reduction.
637  Destroying CRP Cover Before CRP-1 Expiration (Continued)

### G Example of CRP-1G Addendum

The following is an example of CRP-1G Addendum.

**6. TERMS TO ALLOW EARLY LAND PREPARATION**

This contract modification is entered into by the Commodity Credit Corporation (CCC) and the undersigned participant(s) on the Conservation Reserve Contract number in Item 2 above. By signing this contract modification, the CCC agrees to allow the participants identified below to (check one):

- A. Prepare CRP acreage for planting fall seeded crops.
- B. Apply chemicals to prepare CRP acreage for spring seeded crops.

The participant(s), in return, agrees:

- To meet with Natural Resource Conservation Service (NRCS) or Technical Service provider (TSP) to develop a conservation plan for land preparation when the method of destruction could cause adverse environmental effect.

For spring-seeded crops:

- To not hay, graze, or otherwise make commercial use of CRP acreage during the CRP-1 period.

For fall-seeded crops:

- To accept a 25-percent reduction in the annual rental rate if the cover is mechanically removed from CRP acreage during CRP-1 period and not destroyed.
- To no reduction in the annual rental payment if cover is mechanically removed from CRP acreage during CRP-1 period and no commercial use is made of the forage. The participant must pay for field visit by COC to verify destruction of the hay.
- To accept a reduced annual rental payment, if applicable, in the final year of the contract.
- To refund all CRP payments plus interest and liquidated damages if a fall seeded crop, if applicable, is not planted in a normal manner on the acreage identified on the attached aerial photograph.

**NOTE:**

The following statement is made in accordance with the Privacy Act of 1974 (P.L. 93-579) as amended. The authority for requesting the information identified on this form is 7 CFR Part 1400 the Commodity Credit Corporation Charter Act (15 U.S.C. 1714 et seq.), and the Food, Conservation, and Energy Act of 2002 (Pub. L. 107-27) The information collected on this form may be disclosed to other Federal, State, Local-government agencies, Tribal agencies, and nongovernmental entities that have been authorized access to the information by statute or regulation and/or as described in applicable Routine Uses as identified in the System of Records Notice for USDA-FSA-2, Farm Records File. (Automated). Providing the requested information is voluntary. However, failure to furnish the requested information will result in a determination of eligibility to modify the CRP-1 contract to allow early land preparation. The authority for collecting the following information is Pub. L. 107-171.

This authority allows for the collection of information without prior OMB approval mandated by the Paperwork Reduction Act of 1980. The time required to complete this information collection is estimated to average 5 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. The provisions of appropriate criminal and civil fraud, privacy, and other statutes may be applicable to the information provided. RETURN THIS COMPLETED FORM TO YOUR COUNTY FSA OFFICE.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, political beliefs, genetic information, reprisal, or because all or part of an individual’s income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA’s TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write to USDA, Assistant Secretary for Civil Rights, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue, 6W., Stop 9410, Washington, DC 20250-9410, or call toll-free at (866) 632-9992 (English) or (800) 877-8339 (TDD) or (866) 377-8692 (English Federal-relay) or (800) 845-6136 (Spanish Federal-relay). USDA is an equal opportunity provider and employer.
A Erroneous Land Eligibility

Land enrolled that is ineligible shall be terminated according to paragraph 571 from CRP-1. Refunds are not required.

B Erroneous Ownership Determination

If it is determined that CRP-1 was approved based on an erroneous ownership or operatorship determination, COC shall:

• not assess liquidated damages
• not require refund of C/S if participant agrees to maintain the practice for the practice’s lifespan

Note: The practice lifespan equals the length of the approved CRP-1.

• not require refund of annual rental payments earned
• allow producers adversely affected to earn the current year’s annual rental payment
• terminate affected acres of CRP-1.

Note: If the eligible ownership or operatorship requirement was not met at the time CRP-1 was approved, but is currently met, COC shall not terminate CRP-1.
A Policy

*--COC must authorize the installation of windmills, wind turbines, wind-monitoring towers, or other wind-powered generation equipment on CRP acreage on a case-by-case basis consistent with the statute. COC may approve up to 5.0 acres per contract of wind turbines on CRP acreage provided the environmental impacts have been considered according to subparagraph 367 F, and the installation does not occur during the primary resting or brood-rearing season, as determined by FSA STC in consultation under the State Technical Committee. For authority over 5 acres, COC shall submit a request in writing to CEPD--* through the State Office according to subparagraph 31 A. The 5.0-acre per contract threshold is a cumulative figure that is calculated by totaling the square footage of land area devoted to the footprint of the wind generating device and any firebreak installed around the footprint.

Access roads, transformers, and other ancillary equipment will not be considered in calculating the 5.0-acre per contract threshold. A refund shall apply for acreage terminated for access roads, transformers, and other ancillary equipment. See subparagraph 639 B.

Each request shall be documented in the COC minutes and for cases over 5.0 acres, *--forwarded to CEPD through the State Office, with a copy of the completed FSA-850 signed by SEC included with the request before final approval.*--*

B Payment Reductions and Refunds

The payment reduction for installation of wind turbines, wind mills, wind-monitoring towers, or other wind-powered generation equipment is determined to be de minimus.

A refund applies to access roads, transformers, and other ancillary equipment terminated from CRP-1.
639 Wind Turbines

A Policy

If contacted by a producer or power company interested in placing wind turbines on land under contact for CRP, the County Office shall immediately contact the State Environmental Coordinator (SEC) for guidance. The SEC should be provided contact information for the company installing the wind turbines. If the company’s Environmental Impact Statement (EIS) has already been published, a copy should be obtained and provided to the SEC. If the EIS has not yet been completed, the company should be advised to contact the SEC for assistance in addressing CRP issues in the EIS.

The EIS completed for the wind turbine project can usually be cited in completing the *FSA-850 required for each contract where turbines, roads or ancillary equipment will be installed. A completed FSA-850 must be on file for a contract before wind turbine construction can be approved.

If construction will be conducted during the primary nesting season the COC may approve this activity as a spot treatment if the environmental review does not indicate a significant impact will occur on a contract. See paragraph 427. The spot treatment approval should also be placed in the contract file.--*
Section 1   Managed Haying and Grazing, Including Biomass

Acreage Eligibility

B Ineligible Acreage

All land enrolled in SAFE CP38 practices are ineligible for managed haying and grazing throughout the contract period.

Managed Haying and Grazing Provisions

A General Provisions

See WA Exhibit 6 for STC policies on managed haying and grazing.
Part 19  Haying and Grazing of CRP Acres

Section 1  Managed Harvesting and Managed Harvesting of Biomass

663 Acreage Eligibility

A Equivalent Acreage

Acreage eligible for managed harvesting includes acreage devoted to practices CP1, CP2, CP4B, CP4D, CP10, CP18B, CP18C, and CP38 if included in the approved SAFE proposal. Acreage shall become eligible 12 months after the cover is fully established.

B Ineligible Acreage

Acreage ineligible for managed harvesting includes acreage devoted to:

- useful life easements
- land within 120 feet of a stream or other permanent waterbody
- any practices not listed in subparagraph A.

664 Managed Harvesting Provisions

A General Provisions

Managed harvesting, including harvest for biomass, is authorized no more frequently than 1 out of every 3 years after the cover is fully established.

STC must consult with the State Technical Committee:

- to determine appropriate beginning and ending dates for the primary nesting and brood rearing season
- for establishing the frequency of managed harvesting period.

Note: In certain circumstances, States may restrict the amount of acreage that may be harvested as recommended by the State Technical Committee. For example, after consulting with the State Technical Committee, a State establishes that 50 percent of the acreage must be left unhayed for wildlife. States shall report any additional restrictions to CED.
A General Provisions (Continued)

If STC’s do not establish nesting and brood rearing season and harvesting dates and frequency as recommended by the State Technical Committee, STC must:

- submit the dates to CEPD for approval
- include justification to support the dates not recommended by the State Technical Committee
- notify Director, CEPD, each time the primary nesting or brood rearing season or frequency is changed in consultation with the State Technical Committee.

If any State Office wishes to change the primary nesting season beginning or ending date for managed harvesting or frequency, an EA must be completed at their own cost. After completion of EA and issuance of a “Finding of No Significant Impact”, the request may be forwarded to CEPD for approval.

Note: This includes those States subject to the NWF Settlement Agreement that have not yet completed EA.

Managed harvesting is authorized for a single period up to 120 calendar days after the end of the primary nesting season. The length of time established shall be included in the locally approved harvesting plan, which is a part of the conservation plan. The primary purpose of this plan must be to maintain vegetative cover, minimize soil erosion, protect water quality, and protect wildlife habitat quality.

COC’s shall not authorize participants to select their own managed harvesting periods or establish harvesting “windows” greater than the number of calendar days authorized.

Managed harvesting is not authorized during the primary nesting and brood rearing season. Requests for waiver will not be granted.
Managed Harvesting Provisions (Continued)

A General Provisions (Continued)

Before harvesting, CRP participants:

- shall request approval to harvest eligible acreage
- specify acreage to be harvested for hay for livestock and acreage to be harvested for Biomass
- obtain a modified conservation plan to include harvesting requirements, as determined by NRCS or TSP

Notes: The harvesting plan must be site specific and reflect the local wildlife needs and concerns.

Managed harvesting may be incorporated into the conservation plan for new contracts.

- be limited to 1 cutting
- shall not hay or graze the same acreage
- shall not harvest any acreage hayed or grazed under managed, or emergency provisions during the period established by STC in consultation with the State Technical Committee

Exception: For emergency haying and grazing, see paragraph 693

- shall not harvest during the primary nesting or brood rearing season
- shall be assessed a payment reduction based on the number of acres actually harvested times the CRP annual rental payment times 25 percent, as applicable
- shall remove all hay or biomass from all CRP fields within 120 calendar days of the end of the primary nesting season
- who do not own or lease livestock, may harvest hay for sale to an eligible livestock producer or sell the hay for biomass

Participants who harvest CRP acreage without approval or fail to follow these provisions will be subject to the noncompliance provisions in paragraph 667.
B Participant Provisions

CRP participants shall:

- file a request to harvest CRP acreage before harvesting begins
- take the following actions.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Identify the acreage to be harvested for livestock and harvested for Biomass on a GIS-generated map.</td>
</tr>
<tr>
<td>2</td>
<td>Obtain a modified conservation plan to include harvesting requirements, as determined by NRCS or TSP. The harvesting plan <strong>must</strong> be site specific and reflect the local wildlife needs and concerns.</td>
</tr>
<tr>
<td>3</td>
<td>Record intended use on CRP-117. See Exhibit 47</td>
</tr>
<tr>
<td>4</td>
<td>Sign agreement in Exhibit 48</td>
</tr>
<tr>
<td><strong>Note:</strong> All participants are required to sign the agreement before harvesting begins.</td>
<td></td>
</tr>
<tr>
<td>5</td>
<td><em>--Receive notification of approval in writing from COC or CED.--</em></td>
</tr>
<tr>
<td>6</td>
<td>Require CRP participants, who harvested CRP acres, to report the number of acres actually harvested, and sign and date CRP-118. See Exhibit 49</td>
</tr>
<tr>
<td>7</td>
<td>Re-establish the CRP cover, at their own expense, if the cover fails as a result of managed harvesting.</td>
</tr>
<tr>
<td>8</td>
<td>Be assessed a payment reduction according to paragraph 666.</td>
</tr>
<tr>
<td>9</td>
<td>Harvesting shall be limited to 1 cutting.</td>
</tr>
<tr>
<td>10</td>
<td>CRP participants <strong>must</strong> remove all hay or Biomass from all fields within 120 calendar days of the end of the primary nesting season.</td>
</tr>
</tbody>
</table>
## Managed Haying and Grazing PNS Dates and Frequencies

### PNS Dates and Frequencies

The following provides the managed haying and grazing PNS dates and frequencies.

<table>
<thead>
<tr>
<th>CRP-1 Category</th>
<th>PNS Dates</th>
<th>Frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>CRP-1’s approved before September 26, 2006, NWF Settlement Agreement</td>
<td>• Use PNS dates in effect before the NWF Settlement Agreement. • Conservation plans may be modified to incorporate PNS dates of FONSI.</td>
<td>• For haying, no more frequency than 1 out of every 3 years. • Conservation plans may be modified to incorporate the frequency of the alternative selected in FONSI.</td>
</tr>
<tr>
<td>CRP-1’s approved on or after September 26, 2006, NWF Settlement Agreement</td>
<td>• Use PNS dates required under the terms of the NWF Settlement Agreement. • Conservation plans may be modified to incorporate PNS dates selected in FONSI.</td>
<td>For haying, no more than: • 1 out of every 10 years for AZ, CA, CO, ID, KS, MT, NE, NV, NM, ND, OK, SD, TX, UT, and WY • 1 out of every 10 years (East) and 1 out of every 3 years (West) in OR and WA. Conservation plans may be modified to incorporate the frequency of the alternative selected FONSI.</td>
</tr>
<tr>
<td>CRP-1’s approved on or after the date FONSI was published</td>
<td>Use the dates of the alternative identified in FONSI.</td>
<td>Use haying frequencies identified in FONSI.</td>
</tr>
</tbody>
</table>

*---Note: NWF Settlement Agreement States are Arizona, California, Colorado, Idaho, Indiana, Kansas, Montana, Nebraska, Nevada, New Mexico, New York, North--* Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington, Wisconsin, and Wyoming. All other States must use the PNS date and frequencies in effect at the time CRP-1 was approved.
666 Payment Reductions

A Reduction Rates

For each applicable year the CRP participant harvested eligible CRP acreage, the CRP annual rental payment shall be reduced by the number of acres actually harvested, times the CRP per acre annual rental payment, times 25 percent.

**Notes:** The required reduction may be prepaid by participants approved for harvesting and recorded according to 3-FI.

After the annual rental payment scheduled to be made after October 1 of the applicable year is made, producers **must** pay any required reduction according to 3-FI.

667 Compliance

A Required Spot Checks

To ensure that CRP cover is not damaged, wildlife and associated habitat is protected, and participants are complying with harvesting plans, COC’s shall spot-check at least 10 percent of the contracts approved for managed harvesting. Spot checks shall be completed within 10 calendar days of the managed harvesting ending date.

B Maintenance Defaults

When unauthorized haying is discovered, see paragraph 603, and use the provisions in the following.

<table>
<thead>
<tr>
<th>IF the maintenance default is on...</th>
<th>THEN...</th>
</tr>
</thead>
<tbody>
<tr>
<td>less than the reported acreage</td>
<td>compute managed harvesting payment reduction on the determined acreage.</td>
</tr>
<tr>
<td>greater than the reported acreage and COC determines the participant made a good faith effort to comply</td>
<td>compute managed harvesting payment reduction on the reported acreage and assess a payment reduction on the acreage in excess of the reported acreage according to paragraph 603</td>
</tr>
<tr>
<td>greater than the reported acreage and COC determines the participant did not make a good faith effort to comply</td>
<td>terminate CRP-1 according to paragraph 571</td>
</tr>
</tbody>
</table>
668 Reporting Requirements

A Producer Reports

Participants must report the number of acres harvested by a date determined by STC.

B County Office Report

County Offices shall report to the State Office by a date determined by STC, the number of CRP:

- contracts in the county
- contracts where harvesting under managed provisions actually occurred
- acres actually harvested under managed provisions.

C STC Report

STC’s or designees shall report to CEPD by e-mail to ra.dcwashing2.crpreports by November 15, the number of:

- CRP-1’s in the State
- CRP-1’s harvested for hay for livestock under managed conditions
- CRP acres harvested for hay for livestock under managed conditions
- CRP-1’s harvested for Biomass under managed conditions
- CRP acres harvested for Biomass under managed condition.

Note: Negative reports are required.

669 Managed Grazing

A Authority for Managed Grazing

The Food Security Act of 1985, as amended, removed authority for managed grazing.

B CRP Contracts With Existing Managed Grazing Plans

Existing managed grazing plans in CPO are part of the CRP contract and are effective for the life of the CRP contract. CRP participants wishing to switch from managed grazing to routine grazing must modify their existing CPO to permit routine grazing. Managed grazing only applies to CRP contracts approved before July 28, 2010.

670-678 (Reserved)
Section 2    Managed Grazing for CRP Contracts Approved Before July 28, 2010

**679 Acreage Eligibility**

**A Eligible Acreage**

Acreage eligible for managed grazing includes acreage devoted to practices CP1, CP2, CP4B, CP4D, CP10, CP18B, and CP18C. Acreage shall become eligible 12 months after the cover is fully established.

**B Ineligible Acreage**

Acreage ineligible for managed grazing includes acreage devoted to:

- useful life easements
- land within 120 feet of a stream or other permanent waterbody
- any practices not listed in subparagraph A.

**680 Managed Grazing Provisions**

**A General Provisions**

STC must consult with the State Technical Committee:

- to determine appropriate beginning and ending dates for the primary nesting and brood rearing season
- for establishing the duration and frequency of managed haying and grazing periods.
A General Provisions (Continued)

If STC’s do not establish nesting and brood rearing season and grazing dates and frequency as recommended by the State Technical Committee, STC must:

- submit the dates to CEPD for approval
- include justification to support the dates not recommended by the State Technical Committee
- notify Director, CEPD, each time the primary nesting or brood rearing season is changed in consultation with the State Technical Committee.

If any State Office wishes to change the primary nesting season beginning or ending date for managed grazing, an EA must be completed at their own cost. After completion of the EA and issuance of a “Finding of No Significant Impact”, the request may be forwarded to CEPD for approval.

Managed grazing is authorized for a single period up to 120 calendar days not to exceed September 30; or for two 60-calendar-day periods not to exceed September 30. The length of time established shall be included in the locally approved Prescribed Grazing Plan, which is a part of the conservation plan. The primary purpose of this plan must be to maintain vegetative cover, minimize soil erosion, protect water quality, and protect wildlife habitat quality.

COC’s shall not authorize participants to select their own managed grazing periods or establish “windows” greater than the number of calendar days authorized.

Example: COC shall not establish a managed grazing window that allows participant A to conduct managed grazing July 1 through August 31 and allow participant B to conduct managed grazing July 15 through September 13. In this example, the July 1 grazing start date selected by participant A and the September 13 ending date selected by participant B exceeds the 60-calendar-day grazing period.

Managed grazing is not authorized during the primary nesting and brood rearing season. Requests for waiver will not be granted.
Par. 680

Managed Grazing Provisions (Continued)

A General Provisions (Continued)

Before grazing, CRP participants:

- shall request approval to graze eligible acreage
- obtain a modified conservation plan to include grazing requirements, as determined by NRCS or TSP

Notes: The grazing plan must be site specific and reflect the local wildlife needs and concerns.

Managed grazing may be incorporated into the conservation plan for new contracts.

- shall not graze the same acreage
- shall not graze any acreage hayed or grazed under managed or emergency provisions during the period established by STC in consultation with the State Technical Committee or established by the NWF Settlement Agreement

*--Exception: For emergency haying and grazing, see paragraph 693.--*

- shall not graze during the primary nesting or brood rearing season
- shall be assessed a payment reduction based on the number of acres actually grazed times the CRP annual rental payment times 25 percent, as applicable
- shall remove livestock from all CRP fields by a date determined by STC
- who do not own or lease livestock, may rent or lease the grazing privilege to an eligible livestock producer.

Note: CRP participants who rent or lease the grazing privilege to an eligible livestock producer shall:

- inform the County Office of the producer’s name
- identify the acreage to be grazed on an aerial photocopy.
MANAGED GRAZING PROVISIONS (CONTINUED)

A General Provisions (Continued)

Eligible livestock producers who are renting or leasing eligible acreage from a CRP participant, before any grazing occurs, shall:

- sign a statement that he or she will not sublease CRP acreage
- *receive notification of approval, in writing, from COC or CED.*

**Note:** A copy of the notification shall be given to the CRP participant.

Participants who graze CRP acreage without approval or fail to follow these provisions will be subject to the noncompliance provisions in paragraph 667.

B Participant Provisions

CRP participants shall:

- file a request to graze CRP acreage before grazing begins
- take the following actions.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Identify the acreage to be grazed on a GIS-generated map.</td>
</tr>
<tr>
<td>2</td>
<td>Obtain a modified conservation plan to include grazing requirements, as determined by NRCS or TSP. The grazing plan <strong>must</strong> be site specific and reflect the local wildlife needs and concerns.</td>
</tr>
<tr>
<td>3</td>
<td>Record intended use on CRP-117. See Exhibit 47</td>
</tr>
<tr>
<td>4</td>
<td>Sign agreement in Exhibit 48. <strong>Note:</strong> All participants are required to sign the agreement before grazing begins.</td>
</tr>
<tr>
<td>5</td>
<td>Receive notification of approval in writing from COC or CED. <strong>Note:</strong> A copy of the notification <strong>must</strong> be given to the CRP participant.</td>
</tr>
<tr>
<td>6</td>
<td>Require CRP participants, who grazed CRP acres or rented or leased grazing privileges, to report the number of acres actually grazed, and sign and date CRP-118. See Exhibit 49</td>
</tr>
<tr>
<td>7</td>
<td>Re-establish the CRP cover, at their own expense, if the cover fails as a result of managed haying or grazing.</td>
</tr>
<tr>
<td>8</td>
<td>Be assessed a payment reduction according to paragraph 681.</td>
</tr>
<tr>
<td>9</td>
<td>CRP participants <strong>must</strong> remove all livestock from all fields by a date to be determined by STC.</td>
</tr>
<tr>
<td>10</td>
<td>Grazing shall not be conducted after a date determined by STC.</td>
</tr>
</tbody>
</table>
A Reduction Rates

For each applicable year the CRP participant grazed eligible CRP acreage, the CRP 1 annual rental payment shall be reduced by the number of acres actually grazed, times the CRP per acre annual rental payment, times 25 percent.

Notes: The required reduction may be prepaid by participants approved for grazing and recorded according to 3-FI.

After the annual rental payment scheduled to be made after October 1 of the applicable year is made, producers must pay any required reduction according to 3-FI.

B Maintenance Defaults

When unauthorized grazing is discovered, follow paragraph 603, and use the provisions in the following.

<table>
<thead>
<tr>
<th>IF the maintenance default is on...</th>
<th>THEN...</th>
</tr>
</thead>
<tbody>
<tr>
<td>less than the reported acreage</td>
<td>compute managed grazing payment reduction on the determined acreage.</td>
</tr>
<tr>
<td>greater than the reported acreage and COC determines the participant made a good faith effort to comply</td>
<td>compute managed grazing payment reduction on the reported acreage and assess a payment reduction on the acreage in excess of the reported acreage according to paragraph 603.</td>
</tr>
<tr>
<td>greater than the reported acreage and COC determines the participant did not make a good faith effort to comply</td>
<td>terminate CRP-1 according to paragraph 571.</td>
</tr>
</tbody>
</table>
683 Reporting Requirements

A Producer Reports

Participants **must** report the number of acres grazed by a date determined by STC.

B County Office Report

County Offices shall report to the State Office by a date determined by STC, the number of CRP:

- contracts in the county
- contracts where grazing under managed provisions actually occurred
- acres actually grazed under managed provisions.

C STC Report

STC’s or designees shall report to CEPD by e-mail to ra.dcwashing2.crpreports by November 15, the number of:

- CRP-1’s in the State
- CRP-1’s grazed under managed provisions
- CRP acres grazed under managed provisions.

**Note:** Negative reports are required.

684-690 (Reserved)
Section 3  Emergency Haying and Grazing

691 County Eligibility

A Authorization

Emergency haying and grazing of CRP acreage is not:

- intended to be a convenience; rather emergency haying and grazing is generally intended for periods of drought or excessive moisture of such magnitude that livestock producers nationally or across wide-ranging areas are faced with culling of herds or livestock losses

- generally authorized for situations where livestock producers suffer inconveniences in forage availability or prices, because of less than ideal production or over-utilization of acreage not under CRP contract.

Emergency authorization shall be from DAFP or STC determination according to this Section.

B DAFP Authorizations

COC’s may request emergency haying or grazing for all or part of a county with STC concurrence through CEPD.

CEPD shall make determinations on a county-by-county basis.

C Applying for National Authorization

County eligibility is based on COC submitting evidence that the county is suffering from a 40 percent or greater loss in normal hay and pasture production, and either of the following conditions exists for:

- drought conditions, precipitation levels indicate an average of 40 percent or greater loss of normal precipitation for the 4 most recent months, plus the days in the current month before the date of request

- excessive moisture conditions, precipitation levels indicate an average of 140 percent or greater increase in normal precipitation during the 4 most recent consecutive months, plus the days in the current month before the date of request.
C Applying for National Authorization (Continued)

Emergency haying or grazing shall be confined to the acreage physically located within the boundary of the eligible county, regardless of where the headquarters for the farm is located.

**Note:** An entire field, which is partially located in an ineligible county, may be hayed or grazed as part of an eligible county.

COC shall submit requests for authorization for emergency haying or grazing of CRP acreage to CEPD, through the State Office. Requests shall include at a minimum the following:

- CRP-42 that was completed according to Exhibit 51
- detailed narrative written description of disaster conditions in the county
- copy of COC minutes and narrative recommendation
- explanation of livestock emergency and justification of need for emergency measures.

When COC is requesting authorization for emergency haying or grazing in only a part of the county, the County Office shall submit the following:

- CRP-42, completed according to Exhibit 51, for the:
  - entire county
  - affected area
- county map clearly showing the part of the county affected by the disaster

  **Note:** The affected area should be outlined by township boundaries, roads, highways, streams, or other identifiable landmarks.

- detailed written description of disaster conditions in the county.

  **Note:** If the request for part of a county is approved, the part of the county not covered by the request shall not be eligible for haying or grazing of CRP.
C Applying for National Authorization (Continued)

COC shall ensure that an eligible livestock producer, to whom the acreage is rented or leased, is located in an approved county or part of a county, as applicable.

All requests and CEPD determinations, and STC determinations, as applicable, shall be recorded in the COC minutes.

COC shall clearly document in the COC minutes the following:

- justification for the request to release CRP for emergency haying or grazing
- monthly review of conditions in the county and the basis used to determine whether continued haying or grazing is warranted.

STC, or designee, shall thoroughly review COC requests for completeness and make a recommendation before submitting requests to CEPD. Failure to submit complete requests with STC, or designee, recommendation will delay the CEPD response.

After CEPD approves COC’s request, COC shall notify all participants in the county or part of the county, as applicable, of the authorization to hay or graze CRP acreage by the fastest means possible.

Note: Unless otherwise indicated, all emergency haying authorizations shall end August 31, and all emergency grazing authorizations shall end September 30.
D STC Determinations

COC’s may request emergency haying or grazing for all or part of a county to STC using the U.S. Drought Monitor.

STC shall:

- make determinations on a county-by-county basis
- report approvals to CEPD by COB each day.

Note: STC approval notification shall be in the following format.

<table>
<thead>
<tr>
<th>County Name</th>
<th>Date Grazing Approved</th>
<th>Date Haying Approved</th>
</tr>
</thead>
</table>

STC shall not approve counties for emergency haying or grazing based on the U.S. Drought Monitor during the primary nesting and brood rearing season.

*--STC shall not take action to approve counties for emergency haying or grazing based on the U.S. Drought Monitor during the primary nesting and brood rearing season to be effective after the primary nesting season ends.

Exception: STC may take action during the last week of the primary nesting season using the most recent data available from the U.S. Drought Monitor.--*

STC approvals of emergency haying shall end no later than August 31, and approvals of emergency grazing shall end no later than September 30.

E County Eligibility Criteria for STC Determination

For emergency haying and grazing, county eligibility is based on COC submitting evidence that the county is designated as level “D2 Drought-Severe” according to the U.S. Drought Monitor.

The following is an example of U.S. Drought Monitor.

The data cutoff for Drought Monitor maps is Tuesday at 7 a.m. Eastern Standard Time. The maps, which are based on analysis of the data, are released each Thursday at 8:30 a.m. Eastern Time.

NOTE: To view regional drought conditions, click on map below. State maps can be accessed from regional maps.

To compare current drought conditions with last week’s map, click here.
To view tabular statistics of this week’s Drought Monitor, click here.
To view tabular statistics for the Drought Monitor archive, click here.
To view Drought Monitor Change Maps, click here.
Par. 691 County Eligibility (Continued)

G Submitting County Request

COC’s requesting emergency haying or grazing shall access the Drought Monitor Data Downloads Screen at [http://droughtmonitor.unl.edu/dmshps_archive.htm](http://droughtmonitor.unl.edu/dmshps_archive.htm). In the center of the screen is a data table. The following is an example of the data table. Each line of the table corresponds to the date of the weekly Drought Monitor Map.

<table>
<thead>
<tr>
<th>Date</th>
<th>KMZ</th>
<th>Shapefiles</th>
<th>GML</th>
<th>WMS</th>
<th>Statistics</th>
</tr>
</thead>
<tbody>
<tr>
<td>2011-08-02</td>

</tbody>
</table>

Scroll down the table to the appropriate State and county. The data within each drought category column represent the percent of the county at each drought level.

**Example:** Barbour County, Alabama, has:

- 100 percent of the county > “D0” condition
- 100 percent of the county at “D1” or “D0” condition
- 95.06 percent of the county at “D2”, “D1”, or “D0” condition
- 60.64 percent of the county at “D3”, “D2”, “D1”, or “D0” condition
- 0 percent of the county at “D4” condition.

*--If the county has a value in the “D2”, “D3”, or “D4” column, then the county is eligible for STC approval of emergency haying and grazing.--*
H Haying and Grazing Timeframes

The following are haying and grazing timeframes:

- STC designation for emergency grazing may be for up to 90 calendar days, not to exceed September 30
- STC may authorize one 30-calendar-day extension, not to exceed September 30
- STC designation for emergency haying may be for up to 60 calendar days, not to exceed August 31
- STC may not authorize emergency haying extensions.

* * *

*--Note: STC shall not approve counties for emergency haying or grazing during the primary nesting and brood rearing season. This authority requires National Office approval.--*
692 Acreage Eligibility

A Eligible Acreage

Acreage eligible for emergency haying or grazing includes acreage devoted to practices CP1, CP2, CP4B, CP4D, CP10, CP18B, CP18C, and CP38 if included in the approved SAFE proposal.

B Ineligible Acreage

Acreage ineligible for emergency haying or grazing includes acreage devoted to:

- useful life easements
- land within 120 feet of a stream or other permanent waterbody
- any practice not listed in subparagraph A.

693 Emergency Haying and Grazing Provisions

A General Provisions

Emergency haying or grazing shall be confined to the acreage physically located within the boundary of the eligible county, regardless of where the headquarters for the farm is located.

Note: An entire CRP field, which is partially located in an ineligible county, may be hayed or grazed as part of an eligible county.

Before haying or grazing, CRP participants:

- shall request approval to hay or graze eligible acreage

- obtain a modified conservation plan to include haying or grazing requirements, as determined by NRCS or TSP

Note: The haying or grazing plan must be site specific and reflect the local wildlife needs and concerns.

- shall leave at least 25 percent of each field or contiguous CRP fields ungrazed for wildlife, or graze not more than 75 percent of the stocking rate determined by NRCS or TSP
Emergency Haying and Grazing Provisions (Continued)

A General Provisions (Continued)

- shall leave at least 50 percent of each field or contiguous CRP fields unhayed for wildlife--*

- shall not hay or graze the same acreage

- shall not sell the hay

- shall limit haying to 1 cutting

- shall not hay or graze during the primary nesting or brood rearing season

Notes: For States listed in the NWF Settlement Agreement, the haying and grazing dates in subparagraph 665 A apply.

STC shall establish only 1 primary nesting season for managed harvesting, emergency haying and grazing, and routine grazing.

- shall be assessed a payment reduction based on the number of acres actually hayed or grazed times the CRP annual rental rate payment times 25 percent, as applicable

- shall remove all hay or livestock from all CRP fields by a date determined by STC

- who do not own or lease livestock, may rent or lease the haying or grazing privilege to an eligible livestock producer.

CRP participants who rent or lease the haying or grazing privilege to an eligible livestock producer shall:

- identify the acreage to be hayed or grazed on an aerial photocopy.
- inform the County Office of the producer’s name.

Eligible livestock producers who are renting or leasing eligible acreage from a CRP participant, before any haying or grazing occurs, shall:

- sign a statement that he or she will not sublease CRP acreage
- receive notification of approval, in writing, from COC or CED.

Note: A copy of the notification shall be given to the CRP participant.

Participants who hay or graze CRP acreage without approval, or fail to follow these provisions, will be subject to the noncompliance provisions according to paragraph 695.
Par. 693  

**Emergency Haying and Grazing Provisions (Continued)**

**B  Participant Provisions**

CRP participants shall:

- file a request to hay or graze CRP acreage before haying or grazing begins
- take the following actions.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Identify the acreage to be hayed or grazed on an aerial photocopy.</td>
</tr>
<tr>
<td>2</td>
<td>Obtain a modified conservation plan to include haying or grazing requirements, as determined by NRCS or TSP. The haying or grazing plan must be site specific and reflect the local wildlife needs and concerns.</td>
</tr>
<tr>
<td>3</td>
<td>Record intended use on CRP-117. See Exhibit 47</td>
</tr>
<tr>
<td>4</td>
<td>Sign agreement in Exhibit 52.</td>
</tr>
<tr>
<td><strong>Note:</strong> All participants are required to sign the agreement before haying or grazing begins.</td>
<td></td>
</tr>
<tr>
<td>5</td>
<td>Leave at least 50 percent of each field or contiguous CRP fields unhayed for wildlife. Leave at least 25 percent of each field or contiguous fields ungrazed for wildlife, or graze no more than 75 percent of the stocking rate determined by NRCS or TSP.</td>
</tr>
</tbody>
</table>
| 6    | Receive notification of approval in writing from COC or CED. Livestock producers who rent or lease acreage from the CRP participant shall:  
- sign a statement agreeing not to sublease the CRP acreage  
- receive notification of approval from COC or CED. *--*  
**Note:** A copy of the notification must be given to the CRP participant. |
| 7    | Require CRP participants, who hayed or grazed CRP acres or rented or leased haying or grazing privileges, to report the number of acres actually hayed or grazed, and sign and date CRP-118. See Exhibit 49. |
| 8    | Re-establish the CRP cover, at their own expense, if the cover fails as a result of emergency haying or grazing. |
| 9    | Be assessed a payment reduction according to paragraph 694. |
| 10   | Haying shall be limited to 1 cutting. |
| 11   | CRP participants must remove all hay from all fields by a date to be determined by STC. |
| 12   | Haying shall not be conducted after August 31. Grazing shall not be conducted after September 30. |
694 Payment Reductions

A Reduction Rates

For each applicable year the CRP participant hayed or grazed eligible CRP acreage, the CRP-1 annual rental payment shall be reduced by the number of acres actually hayed or grazed, times the CRP per acre annual rental payment, times 25 percent.

Notes: The required reduction may be prepaid by participants approved for haying or grazing and recorded according to 3-FI.

After the annual rental payment scheduled to be made after October 1 of the applicable year is made, producers must pay any required reduction according to 3-FI.

695 Compliance

A Required Spot Checks

To ensure that CRP cover is not damaged, wildlife and associated habitat is protected, and participants are complying with haying and grazing plans, COC’s shall spot-check at least 10 percent of the contracts approved for emergency haying and grazing. Spot checks shall be completed within 10 calendar days of the ending date determined by STC.

B Maintenance Defaults

When unauthorized haying or grazing is discovered, follow paragraph 603, and use the provisions in the following.

<table>
<thead>
<tr>
<th>IF the maintenance default is on...</th>
<th>THEN...</th>
</tr>
</thead>
<tbody>
<tr>
<td>less than the reported acreage</td>
<td>compute emergency haying or grazing payment reduction on the determined acreage.</td>
</tr>
<tr>
<td>greater than the reported acreage and COC determines the participant made a good faith effort to comply</td>
<td>compute emergency haying and grazing payment reduction on the reported acreage and assess a payment reduction on the acreage in excess of the reported acreage according to paragraph 603</td>
</tr>
<tr>
<td>greater than the reported acreage and COC determines the participant did not make a good faith effort to comply</td>
<td>terminate CRP-1 according to paragraph 571</td>
</tr>
</tbody>
</table>
696 Reporting Requirements

A Producer Reports

Participants must report the number of acres hayed or grazed by a date determined by DAFP.

B County Office Report

County Offices shall report to the State Office by a date determined by STC, the number of CRP:

- contracts in the county
- contracts where haying or grazing under emergency authority actually occurred
- acres actually hayed or grazed under emergency authority.

C STC Report

STC’s or designees shall report to CEPD by e-mail to ra.dcwashing2.crpreports by a date determined by DAFP, the number of:

- CRP-1’s in the State
- CRP-1’s hayed or grazed under emergency authority
- CRP acres hayed or grazed under emergency authority.

Note: Negative reports are required.

697-713 (Reserved)
Section 4  Routine Grazing Provisions

714  Restrictive Grazing

A  General Restrictions

Except as authorized in this part, CRP acreage shall not be grazed during the CRP-1 period.

Exceptions:  Free roaming wildlife may graze CRP acreage.

Grazing of CRP acreage may be authorized under certain conditions, such as an approved grazing plan or DAFP authorization due to widespread drought of other similar national emergency.

715  Acreage Eligibility

A  Eligible Acreage

Acreage eligible for routine grazing includes acreage devoted to practices CP1, CP2, CP4B, CP4D, CP10, CP18B, CP18C, and CP38 if included in the approved SAFE proposal. Acreage shall become eligible 12 months after the cover is fully established.

B  Ineligible Acreage

Acreage ineligible for routine grazing includes acreage devoted to:

- useful life easements
- land within 120 feet of a stream or other permanent waterbody
- any practices not listed in subparagraph A.
A General Provisions

The Food, Conservation, and Energy Act of 2008 added new authority for routine grazing. Because of the new authority, routine grazing frequency and duration must be established. Establishing the frequency and duration or routine grazing requires analysis under NEPA.

STC shall consult with the State Technical Committee to determine routine grazing frequency and duration. States must set frequency and duration for routine grazing for new contracts. If States want to use the frequency and duration that applies for managed grazing, STC may make that decision and then no additional NEPA is required. However, if STC, in consultation with the State Technical Committee, wants something other than the frequency and duration that currently applies for managed grazing, additional NEPA is required.

Routine grazing, as authorized, consists of the following 3 activities:

- routine grazing
- routine - permissive grazing
- routine - incidental grazing.

* * *

*--If any State Office wishes to change the frequency and primary nesting season dates for grazing, EA’s must be completed at their own cost. After completion of the EA and issuance of a “Finding of No Significant Impact”, the request may be forwarded to CEPD for approval.

Notes: STC shall establish only 1 primary nesting season for managed harvesting, emergency haying and grazing, and routine grazing.

No changes are authorized to routine permissive grazing or routine incidental grazing as authorized.
A General Provisions (Continued)

NRCS or TSP shall use NRCS technical practice standard No. 528, Prescribed Grazing, in developing the Routine Grazing Plan. The length of time and frequency established shall be included in the locally approved Prescribed Grazing Plan, which is a part of the conservation plan. The primary purpose of this plan must be to maintain vegetative cover, minimize soil erosion, protect water quality, and protect wildlife habitat quality.

Routine grazing is not authorized during the primary nesting and brood rearing season. Requests for waiver will not be granted.

Before grazing, CRP participants:

• shall request approval to graze eligible acreage

• obtain a modified conservation plan to include routine grazing requirements, as determined by NRCS or TSP

Notes: The routine grazing plan must be site specific and reflect the local wildlife needs and concerns.

Routine grazing may be incorporated into the conservation plan for new contracts.

• shall not hay or graze the same acreage

• shall not graze any acreage hayed or grazed under managed or emergency provisions during the period established by STC in consultation with the State Technical Committee.

Exception: For emergency haying and grazing, see paragraph 693

• shall not graze during the primary nesting or brood rearing season
A General Provisions (Continued)

- shall be assessed a payment reduction based on the number of acres actually grazed times the CRP annual rental payment times 25 percent, as applicable

- who do not own or lease livestock, may rent or lease the grazing privilege to an eligible livestock producer.

Note: CRP participants who rent or lease the grazing privilege to an eligible livestock producer shall:

- inform the County Office of the producer’s name
- identify the acreage to be grazed on an aerial photocopy.

Eligible livestock producers who are renting or leasing eligible acreage from a CRP participant, before grazing occurs, shall:

- sign a statement that he or she will not sublease CRP acreage
- *--receive notification of approval, in writing, from COC or CED.--*

Note: A copy of the notification shall be given to the CRP participant.

Participants who graze CRP acreage without approval or fail to follow these provisions will be subject to the noncompliance provisions in paragraph 667.
### B Participant Provisions

CRP participants shall:

- file a request to graze CRP acreage before grazing begins
- take the following actions.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Identify the acreage to be grazed on an aerial photocopy.</td>
</tr>
<tr>
<td>2</td>
<td>Obtain a modified conservation plan to include routine grazing requirements, as determined by NRCS or TSP. The routine grazing plan <strong>must</strong> be site specific and reflect the local wildlife needs and concerns.</td>
</tr>
<tr>
<td>3</td>
<td>Record intended use on CRP-117. See Exhibit 47.</td>
</tr>
<tr>
<td>4</td>
<td>Sign agreement in Exhibit 48. <strong>Note:</strong> All participants are required to sign the agreement before routine grazing begins.</td>
</tr>
</tbody>
</table>
| 5    | *--Receive notification of approval in writing from COC or CED. Livestock producers who rent or lease acreage from the CRP participant shall:  
  - sign a statement agreeing not to sublease the CRP acreage  
  - receive notification of approval from COC or CED.--*  
  **Note:** A copy of the notification **must** be given to the CRP participant. |
| 6    | Require CRP participants, who grazed CRP acres or rented or leased grazing privileges, to report the number of acres actually grazed, and sign and date CRP-118. See Exhibit 49. |
| 7    | Re-establish the CRP cover, at their own expense, if the cover fails as a result of routine grazing. |
| 8    | Be assessed a payment reduction according to paragraph 666. |
| 9    | CRP participants **must** remove livestock from all fields during the primary nesting season. |
| 10   | Routine grazing shall not be conducted during the primary nesting season. |
A Reduction Rates

For each applicable year the CRP participant grazed eligible CRP acreage, the CRP annual rental payment shall be reduced by the number of acres actually grazed, times the CRP per acre annual rental payment, times 25 percent.

Notes: The required reduction may be prepaid by participants approved for routine grazing and recorded according to 3-FI.

After the annual rental payment scheduled to be made after October 1 of the applicable year is made, producers must pay any required reduction according to 3-FI.
A Required Spot Checks

To ensure that CRP cover is not damaged, wildlife and associated habitat is protected, and participants are complying with haying and grazing plans, COC’s shall spot-check at least 10 percent of the contracts approved for routine grazing. Spot checks shall be completed within 10 calendar days of the ending date determined by STC.

B Maintenance Defaults

When unauthorized grazing is discovered, follow paragraph 603, and use the provisions in the following.

<table>
<thead>
<tr>
<th>IF the maintenance default is on...</th>
<th>THEN...</th>
</tr>
</thead>
<tbody>
<tr>
<td>less than the reported acreage</td>
<td>compute routine grazing payment reduction on the determined acreage.</td>
</tr>
<tr>
<td>greater than the reported acreage and COC determines the participant made a good faith effort to comply</td>
<td>compute routine grazing payment reduction on the reported acreage and assess a payment reduction on the acreage in excess of the reported acreage according to paragraph 603.</td>
</tr>
<tr>
<td>greater than the reported acreage and COC determines the participant did not make a good faith effort to comply</td>
<td>terminate CRP-1 according to paragraph 571.</td>
</tr>
</tbody>
</table>
A Producer Reports

Participants **must** report the number of acres grazed by October 10.

B County Office Report

County Offices shall report to the State Office by a date determined by STC, the number of CRP:

- contracts in the county
- contracts where routine grazing actually occurred
- acres actually grazed.

C STC Report

STC’s or designees shall report to CEPD by e-mail to ra.dcwashing2.crpreports by a date determined by DAFP, the number of:

- CRP-1’s in the State
- CRP-1’s grazed under routine grazing
- CRP acres grazed under routine grazing.

**Note:** Negative reports are required.
A Incidental Grazing

Subject to COC or CED approval, CP8A, CP13C (filter strips), CP15A, CP21, and CP33 may be grazed only if all of the following requirements are met:

- grazing is incidental to the gleaning of the crop residue in a field, or before the harvest of a small grain

- grazing occurs after the participant harvests crops from within the surrounding field, or during the dormant period of a small grain intended for harvest

- grazing shall not occur during the primary nesting or brood rearing season, as determined by STC in consultation with the State Technical Committee, for States affected by the NWF Settlement Agreement (subparagraph 665 B)

Note: See paragraph 427

- all livestock shall be removed from CRP acreage no later than 2 months after incidental grazing begins

- an NRCS or TSP final status review has been completed for the practice that certifies the approved cover has been established

- grazing will not adversely affect the purpose and performance of the practice

- the participant agree in writing to:
  - accept a 25 percent payment reduction for the acreage being grazed
    
    Note: The required reduction may be prepaid by participants and recorded according to 3-FI.
  
  - re-establish, at their own expense, any cover destroyed or damaged as a result of this incidental grazing, regardless of recommendations or determinations made by NRCS.

  Note: See Exhibit 54 for CRP-37.

If the acreage to be grazed is separated from the surrounding cropland by a fence, the acreage shall not be grazed.

Example: John Brown requests to graze a filter strip enrolled in CRP as part of the gleaning of the corn crop residue in the field. There is a fence between the field with the corn residue and the filter strip. COC shall not approve Mr. Brown’s request.
A Routine Permissive Grazing Gleaning

COC’s may authorize gleaning of crop residue on acreage enrolled in CRP if all the following requirements are met:

- the acreage is in the first year of CRP-1
- the acreage was devoted to an agricultural commodity before enrollment in CRP
- mechanical harvesting of the agricultural commodity was not completed in sufficient time for gleaning of the crop residue to be completed before the effective date of CRP-1
- the gleaning of the crop residue will not delay the establishment of the approved cover
- producer agrees, in writing, to:
  - provide adequate cover to prevent soil erosion
  - pay for a field visit to determine if gleaning will be authorized
  - remove all livestock no later than 2 months after gleaning begins.

B Example

Jim has an approved offer that will become effective October 1; the:

- acreage is planted to corn
- approved practice cannot be established until the following spring.

COC may authorize Jim to allow livestock to glean the acreage after October 1 (the effective date of the contract), provided the conditions in subparagraph A are met.

722-740 (Reserved)
Prescribed Grazing

A Prescribed Grazing

Prescribed grazing is authorized where kudzu or other invasive species have infested CRP acreage:

- according to NRCS technical practice standard No. 528, Prescribed Grazing
- not to exceed 30 calendar days between May 1 and September 1
- for not more than a total of 3 consecutive years during the life of CRP-1.

Requests to graze kudzu or other invasive species must be in writing before COC may authorize grazing on the CRP acreage.

Note: Requests must identify the invasive species and dates acreage will be grazed.

A payment reduction shall not be assessed for prescribed grazing.

B County Office Action

COC shall consult FS or other natural resources agency before approving requests to graze kudzu or other invasive species invested acreage.

Note: Conservation plan shall not be modified by NRCS for this purpose.

Applicable County Offices:

- shall inform producers of the kudzu and other invasive species grazing provisions
- shall not reduce the annual rental payment for prescribed grazing
- may approved subsequent requests by the same CRP participant

Note: COC shall approve each request.

- shall spot check CRP-1’s approved for kudzu or other invasive species grazing to ensure that livestock are not grazing more acreage or longer than authorized.
### A Summary of Each Type of Haying and Grazing

The following provides a summary of each type of haying and grazing and the applicable policy and payment reduction.

<table>
<thead>
<tr>
<th>Haying and Grazing Provisions Table</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Type/Provisions Activity/For</strong></td>
</tr>
</tbody>
</table>
| Managed Harvesting for Hay          | • Acreage devoted to practice CP1, CP2, CP4D, CP10, CP18B, CP18C, or CP38E. If included in the approved SAFE proposal.  

  • No more frequently than 1 in 3 years. See paragraph 665  
  • Emergency haying or grazing restarts the clock.  
  • Not authorized during the primary nesting season.  
  • Up to 120 calendar days after the end of the primary nesting season.  
  • Request approval before harvesting eligible acreage.  
  • Spot-check 10 percent of contracts approved. | 25 |
| Managed Harvesting for Biomass      | • Acreage devoted to practice CP1, CP2, CP4D, CP10, CP18B, CP18C, or CP38E. If included in the approved SAFE proposal.  

  • No more frequently than 1 in 3 years. See paragraph 665  
  • Emergency haying or grazing restarts the clock.  
  • Not authorized during the primary nesting season.  
  • Up to 120 calendar days after the end of the primary nesting season.  
  • Request approval before harvesting eligible acreage.  
  • Spot-check 10 percent of contracts approved. | 25 |

| Managed Grazing for Contracts Approved Before July 28, 2010 | • Acreage devoted to practice CP1, CP2, CP4D, CP10, CP18B, CP18C, or CP38E, if included in the approved SAFE proposal.  
  • No more frequently than 1 in 3 years. See [paragraph 665](#).  
  • Emergency haying or grazing restart the clock.  
  • Not authorized during the primary nesting season.  
  • Up to 120 calendar days after the end of the primary nesting season.  
  • Request approval before grazing eligible acreage.  
  • Spot-check 10 percent of contracts approved. | 25 |
| Emergency Haying | • Acreage devoted to practice CP1, CP2, CP4D, CP10, CP18B, CP18C, or CP38E. If included in the approved SAFE proposal.  
  • Shall leave 50 percent of field or contiguous fields unhayed.  
  • Shall not sell the hay.  
  • Authority ends August 31.  
  • Request approval before haying eligible acreage.  
  • Spot-check 10 percent of contracts approved. | 25 |
| Emergency Grazing | • Acreage devoted to practice CP1, CP2, CP4D, CP10, CP18B, CP18C, or CP38E. If included in the approved SAFE proposal.  
  • May graze 75 percent of field or contiguous fields, or graze entire field or contiguous fields at no more than 75 percent of the stocking rate.  
  • Authority ends September 30.  
  • Request approval before grazing eligible acreage.  
  • Spot-check 10 percent of contracts approved. | 25 |

771 General CREP Information

A Background

On February 19, 1997, CCC issued a final rule in 7 CFR 1410.50(b) that provides that CCC may enter into agreements with States to use CRP to cost-effectively further “specific conservation and environmental objectives of that State and the nation.”

CREP has been established to provide a flexible and cost-effective means to address agricultural resource problems by targeting Federal and State resources to specific geographic regions of substantial environmental sensitivity for a 10- to 15-year period.

CREP as part of CRP is administered under the same statutes and Federal regulations. Administration and management of CREP at the national level is the responsibility of the FSA CREP Program Manager. After CREP agreements are entered into with State governments or Indian Tribes, eligible cropland and marginal pastureland may be offered and enrolled on a continuous signup basis. * * * The State CREP supplement to 2-CRP is drafted by the FSA State Office after the CREP agreement is signed by the Secretary and the State Governor and must receive approval by the Program Manager before publication.

*--Notes: CREP policies and procedures generally adhere to those of CRP’s continuous signup except where modified by specific provisions outlined in CREP agreements and related State supplements to this handbook.

Payments for CREP CRP-1 participants must adhere to the written CREP agreements. Changes made in PIP/SIP/WRI for CRP’s general and continuous signup do not automatically apply to CREP’s unless those agreements indicate that these payments shall be made “according to 2-CRP” or “consistent with National CRP directives” or similarly worded reference. CREP agreements which include specific payment provisions such as “25% WRI hydrology restoration payments shall be paid for practices CP23 and CP23A” must be adhered to as written unless amended by a modified CREP agreement and State directive.--*
B CREP Primary Goals

The primary goal of CREP is to establish a unique CRP program initiative through which the resources of both a State or Tribal government, or NGO, and CCC/FSA can be targeted in a coordinated manner to address specific high priority conservation and environmental objectives of that State and the nation.

CREP agreements are to be designed for specific geographic areas within a State that have been adversely impacted by agricultural activities through the use of approved conservation buffer and related practices. CREP conservation practices must be designed to achieve substantial on-site and off-site natural resource benefits targeting 1 or more of the following goals:

- restore/establish wildlife habitat
- enhance water quality
- reduce soil erosion
- enhance air quality
- restore/establish wetlands
- promote conservation forestry
- increase control of critical invasive species
- enhance critical threatened and endangered plant and animal species survival
- achieve a net water savings in ground and/or surface waters and conserve energy.

The achievement of multiple natural resource benefits through CREP contracts is strongly encouraged.

Important: All cropland and marginal pastureland proposed for a CREP project must meet all eligibility criteria according to paragraph 151. CREP agreements cannot:

- be used to create new categories of eligible land, or modify cropping history or producer eligibility provisions in paragraph 151
- provide for FSA to exceed total county cropland limits, unless standard 25 percent waivers are approved as outlined in paragraph 81
- be used to assist State and/or local governmental agencies toward meeting requirements of a court order, settlement agreement, or other legal mandate.

C USDA Assistance

To meet CREP goals, USDA provides financial, educational, and technical assistance to help producers voluntarily implement conservation practices that will enhance the environment in an economically efficient manner. This assistance will be provided after a CREP agreement is signed by the State Governor, or designee, or Tribal Representative and the Secretary of Agriculture, or designee, to implement a State’s CREP.
## A New CREP Project Development Stages

*--The implementation of a new CREP program typically has the following 7 general stages.--*

<table>
<thead>
<tr>
<th>Stage</th>
<th>Development</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>State CREP partners identify natural resource concerns, identify a solid State funding commitment, and draft a written CREP proposal for submission to the Program Manager.</td>
</tr>
<tr>
<td>2</td>
<td>Program Manager and National CREP Review Team will review the proposal and provide written comments to State CREP partners. Subsequent negotiation with State CREP partners may also be conducted to resolve outstanding issues.</td>
</tr>
</tbody>
</table>
| 3     | State CREP partners will develop a Draft CREP Agreement outlining the legal provisions of the proposed State CREP Program and submit to the Program Manager. The Program Manager, National CREP Review Team, and USDA-OGC will review the draft agreement and provide all necessary agreement wording changes back to the State CREP partners.  
**Note:** In most cases, CREP agreement drafts are updated through cycles of review and refinement between State CREP partners and National CREP Review Team/OGC negotiations. |
| 4     | After full agreement and consensus is achieved among State CREP partners and between State CREP partners and the Program Manager, a Final CREP Agreement is prepared by State CREP partners and submitted to the Program Manager for USDA-OGC approval. |
| 5     | The FSA State Office, in consultation with State CREP partners, must:  
• submit a CREP project area shapefile for the new CREP project area  
  **Note:** A separate shapefile must be submitted to CE PD for each project area.  
• consult CE PD to ensure that the shapefile format is consistent with all CREP shapefiles.--* |
| 6     | After the final agreement is signed by the Secretary of Agriculture and the Governor, the FSA State Office drafts and submits a State supplement to 2-CRP to the Program Manager for approval. |
| 7     | The State and County FSA Offices, PAS, and State CREP partners conduct outreach/promotional activities, issue local press releases and fact sheets, conduct training, and announce CREP program signup. |
CREP proposals must:

- address a recognized resource conservation concern of State and national significance, and demonstrate the ability to achieve substantial environmental benefits in a cost-effective manner

- present clear program goals with measurable natural resource/environmental protection targets reflecting the anticipated level of benefits the program will achieve when fully enrolled

**Example:** The project may include a reduction in nitrogen loading to rivers and streams by 2,000,000 pounds from the current level when enrollment goals are reached.

- provide for a substantial financial commitment by State CREP partners

**Notes:** This commitment shall be not less than 20 percent of the total project cost. In addition, not less than 10 percent of the total project cost (1/2 of this 20 percent) must be provided by State CREP partners in the form of either of the following:

  - direct new payments to program participants
  - new funding for a CREP project.

Total cost of the CREP project is the sum of all Federal and State direct payments to participants plus all approved State In-Kind contributions.

State partners may use funds from other Federal sources towards the required 20 percent partner contributions provided that the Federal dollars are **not:**

  - cost-share for practice establishment
  - derived from USDA.

**Note:** Funds from other Federal sources **cannot** be used to meet required 20 percent State partner contributions unless written approval is obtained from the Federal source and submitted to the CREP Program Manager.
A New CREP Project Development Stages (Continued)

The following costs may **not** be counted towards the State 20 percent contribution of the total project cost for CREP:

- any funds offered from groups or individuals for CREP which are conditionally provided only if participants agree to enter into agreements to sell, lease or transfer carbon/timber/grazing, etc., back to the group or individual

- participant’s portion of the cost to establish and maintain practices

- cost incurred by:
  - USDA or TSP to provide administrative or technical assistance for individual offers/contracts/plans
  - State partners outside the CREP project area
  - State partners in the CREP project area which are not targeted to achieve the same primary natural resource benefits as the CREP project
  - State partners before the CREP agreement is signed except for cost incurred because of the an environmental assessment and/or biological assessment
  - State partners to conduct an agreement signing ceremony
  - State partners after the CRP contracts expire
  - other State partner costs determined by USDA to be unsuitable.

- provide detailed project cost analysis with proposed total Federal and State CREP partner outlays needed to support the request

**Note:** State project cost analysis shall include but is not limited to the following:

- USDA and State partner costs for re-enrolling expiring CRP acreage in the project

- the net present value of Federal CRP rental payments and proposed annual State incentives using the discount rate required by OMB according to Circular A 94 if such payments are not expected to be outlaid in the first 2 years after the contracts are approved. Current rates posted at [http://www.whitehouse.gov/omb/circulars/a094/a94_appx-c.html](http://www.whitehouse.gov/omb/circulars/a094/a94_appx-c.html).
A New CREP Project Development Stages (Continued)

- be consistent with the CRP statute and regulations
- provide for interagency cooperation and provide detailed evidence of State and local agency, producer group, general community, and NGO support for the project, including letters of support, etc.

*--Note: Copies of letters or other statements from local groups reflecting concerns or opposition obtained during this review stage, if any, must also be submitted.--*

- provide a detailed quantifiable monitoring and evaluation component to measure the success of the project
- provide appropriate surveys, maps (including GIS maps), GIS shape file of the project area, tables, and reports supporting the proposal
- provide detailed quantifiable and statistical analysis justifying all incentives and payments

**Example:** Provide a spreadsheet and narrative summary providing a cost comparison of opportunity costs and indicating incentives needed to replace some of the opportunity costs forgone.

- provide detailed analysis of the technical and administrative assistance needs and evidence of sufficient staff resources to meet the needs.

**Note:** See CREP proposal outline requirements in paragraphs 775 through 777.

B New Proposal Development/Approval Process

State CREP partners (including Tribal governments):

- develop the detailed CREP proposal after on-going consultation with appropriate FSA and other Federal agencies and any non-Federal partners participating in the proposal
- submit the proposal to the Secretary with a formal cover letter from the Governor’s or Tribal office, or the appropriate designee, summarizing the project and requesting approval and also a copy to CEPD, attention CREP Program Manager, for review and comment.

After receiving a proposal, the National CREP Review Team will review the proposal and provide written comments to the State agency or Tribal representative. The State or Tribal representative should respond, in writing, addressing questions or issues raised.
C Compliance with NEPA and Related Statutes, Executive Orders, and Departmental Regulations

During the initial stages of the CREP proposal development, FSA SEC is responsible for ensuring that a programmatic EA be developed and used by State CREP partners as a CREP policy-development tool to ensure that potential environmental impacts are fully considered before the drafting of the Final CREP Agreement. It is the responsibility of CREP partners to fully fund the EA process in coordination with FSA’s National Environmental Compliance Manager.

The draft EA must be:

- started and completed as early in the policy development stage as possible
- forwarded by the SEC to FSA’s National Environmental Compliance Manager for review and comment
- made available for 15 calendar days for public review by publishing a notice of availability of the draft EA in the areas to be affected by the CREP Agreement
- redrafted to include any comments received during the public comment period in the preparation of the final EA.

The final EA must be:

- forwarded by SEC to FSA’s National Environmental Compliance Manager for review and comment
- used to develop FONSI if no significant adverse environmental impacts are noted
- made available for 15 calendar days for public review by publishing a notice availability of the final EA and FONSI in the areas to be affected by the CREP Agreement.

Note: Contracts cannot be approved until the NEPA process is completed.
D Preparing the Draft CREP Agreement

Through ongoing negotiations, State CREP partners, National CREP Review Team, and Program Manager will work to resolve all outstanding issues raised by the CREP proposal. After the Program Manager indicates that the CREP proposal is viable, State CREP partners will be asked to prepare the Draft CREP Agreement.

The draft CREP Agreement must:

- be developed after the Program Manager indicates the CREP proposal is viable
- be submitted for review and comment to the Program Manager with a cover letter summarizing the project and requesting approval
- be reviewed and subsequently approved by the Program Manager
- explicitly state that the NEPA process was completed and a FONSI was issued
- be reviewed by USDA-OGC and approved for legal sufficiency before the Agreement is signed.

Note: The draft CREP Agreement may need to be edited and resubmitted more than once by State CREP partners before approval by the Program Manager.

E Handling Final CREP Agreements/Signing Events

Upon receiving approval of the draft CREP Agreement by the Program Manager, State CREP partners may coordinate and host any ceremonies for the signing of the final CREP Agreement document with the Secretary’s office.

Note: Contact with the Secretary’s appointment scheduler should be initiated as early as possible to timely schedule an appropriate signing event or signing ceremony.

For the signing, at least 2 copies of the final CREP Agreement must be prepared. One original signed document shall be forwarded to CEPD, attention CREP Program Manager, within 14 calendar days. All remaining original signed documents may be retained by the State or Tribal representative, as applicable.

The final CREP Agreement becomes effective after obtaining Governor or Tribal representative and the Secretary of Agriculture, or designee signatures. A witness page may also be developed and signed along with the CREP Agreement by other attendees; however, this page is not formally part of the CREP Agreement.

FSA State Offices, in consultation with the State CREP partners and PAS, shall draft a State CREP Fact Sheet, news release, and questions and answers for distribution after the final CREP Agreement is signed. These releases should include a “Signup Start Date”. CEPD shall arrange for the posting of copies of these items on FSA’s public web site for general access.
F  Addendums to Existing CREP Agreements

Addendums to existing CREP Agreements must be coordinated with all State CREP partners and Program Manager and:

- submitted to DAFP, attention Program Manager, including a cover letter summarizing the project changes and requesting approval
- include additional updated detailed project cost analysis, with adjusted Total Federal and State Partner outlays for any project changes proposed that will impact outlays to ensure the 20 percent State funding provisions of subparagraph A will continue to be met
- include any updated NEPA documents as determined necessary by FSA’s National Environmental Compliance Manager

Note:  Updated NEPA documents must be funded by CREP partners.

- submitted with sufficient analysis and documentation justifying the changes including any new GIS and other appropriate maps, new practice provisions, payment provisions, etc.

*--Note:  For amendments to existing CREP agreements where the project area will change, follow shapefile requirements in subparagraph A, step 5.--*

- reviewed by the National CREP Review Team
- approved by the Program Manager
- reviewed by OGC for legal sufficiency.

After tentative approval by the Program Manager, a minimum of 2 addendum documents must be signed by FSA-DAFP and by the manager of the lead State Partner agency, or State Governor if required by State law. One original CREP addendum shall be retained by the National Office and all other original documents may be retained by the applicable State or Tribal office for record keeping purposes.

Notes: Additional State supplements to 2-CRP and County FSA training may also be needed to support addendums to CREP agreements.

*--No lands may be enrolled under the provisions of the approved addendums until USDA’s CREP Program Manager approves a detailed State amendment to national CRP directives, which will provide a thorough description of CREP policies.--*
G  CREP Outreach

SED’s shall contact key representatives of the State government and Tribal Representatives offer to make a general presentation on CREP.

FSA State Offices shall notify representatives of the State Technical Committee and commodity, environmental, and other potentially interested groups of the availability of CREP.

The FSA National Office will work with interested parties in determining the viability of CREP proposals. However, the State CREP partners are responsible for proposal development.

Note: Brochures, pamphlets, and a brief slide show outlining CREP are available upon request to FSA State and County Offices to assist in outreach activities. Contact PAS to receive a list of outreach materials.
A Maximum Payment Rate (Per Acre) Payment Policy

Soil rental rates used in maximum rental payment rate calculation for CREP contracts shall be determined according to Part 5. Except as provided for in subparagraph B, all maximum payment rates shall be based on approved nonirrigated cropland soil rental rates or marginal pastureland rental rates.

Note: Eligible cropland that is irrigated may be offered for CREP under nonirrigated rental rates unless irrigated rates are authorized under the agreement.

Incentive rates shall be set at levels consistent with those provided for in this handbook and the CREP agreement.

Higher incentive rates may be determined necessary by State CREP partners to achieve program participation for any practice; they **must** be thoroughly justified in the CREP proposal.

States or other entities **must** provide additional annual or lump-sum payments for CREP. These payments may be included as part of the State 20 percent matching funds.

Note: FSA will not manage, disburse, account for, or report any non-Federal CREP monies or payments.

Maintenance rates used in maximum payment rate calculations shall be set at levels consistent with procedure as provided in this handbook.

B Irrigated Rental Rates

CREP proposals may include requests to offer irrigated rental rates for eligible irrigated cropland and/or irrigated marginal pastureland to achieve targeted groundwater and/or surface water savings. In addition to water savings, CREP proposals which target irrigated land enrollment should also, to the extent practicable, be formulated to achieve energy conservation, water quality, wildlife habitat, and erosion reduction benefits.

Note: Lands determined as irrigated **must** meet all eligibility requirements according to paragraph 151. In addition, irrigated cropland **must** have been irrigated with at least ½ acre/foot for 4 of the 6 year 2002-2007, and, **must** at the time the offers are submitted be legally and physically capable of being irrigated in a normal manner.
B  Irrigated Rental Rates (Continued)

Irrigated rental rates must be approved before CREP signup. Irrigated rental rates shall only be approved for those CREP proposals targeting water savings for which adequate assurance that substantial water conservation can be achieved and to address a recognized environmental concern.

The State CREP partners must provide in the proposal sufficient support justifying irrigated rental rates. The CREP proposal must include:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
</table>
| 1    | Specific project details including but not limited to:  
  • GIS and other applicable maps outlining the proposed irrigated CREP geographic area, including watersheds  
  • expected irrigated total cost of the program  
  • summary table projecting expected irrigated and nonirrigated acres enrolled by practice  
  • offer ranking process proposed, if applicable  
  • provisions for the inclusion of any nonirrigated acreage proposed. |
| 2    | Justification for the per acre costs based on expected per acre/foot of water saved in comparison to alternative methods to achieve water savings such as calibration of nozzles, re-leveling, EQIP dryland conversion projects, including a table of per acre foot of water savings compared to other water conservation options. |
**B  Irrigated Rental Rates (Continued)**

<table>
<thead>

<td>• the temporary cessation of irrigation water use and conservation of related saved water for the land enrolled in CREP through a specialized water use contract between local water authorities and the participating landowners</td>
</tr>
<tr>
<td></td>
<td>• similar permanent or temporary arrangements formally agreed to between local water authorities and the participating landowners which achieve water use cessation and water conservation objectives for the land enrolled in CREP</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Any temporary water arrangements with participants <strong>must</strong> provide for the discontinuation of water use for the enrolled land covering the life of the CREP contract, and provide a guarantee of the return of those water rights/allocations upon termination of the CRP contract, unless longer-term provisions are otherwise explicitly provided for.</td>
</tr>
<tr>
<td></td>
<td>• strict State/local moratoriums (or related restrictions) on new water withdrawals and uses and/or State waterbanking or similar water pooling programs in the applicable region that ensure the overall water savings goals will not be offset by new water withdrawals or nonconserving uses of saved water</td>
</tr>
</tbody>
</table>
B Irrigated Rental Rates (Continued)

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 (Cntd)</td>
<td>provisions under which only State/local authorities continue to manage water and water rights and must not contain any USDA, CCC, or FSA water or water rights management responsibilities or requirements</td>
</tr>
</tbody>
</table>

**Important:** USDA/CCC will not buy, lease, or otherwise hold water rights leases or agreements.

- a thorough description of the proposed water savings monitoring, evaluation and annual reporting component
- estimates of energy conservation goals/objectives for energy saved because of water pumping reductions
- provisions, if applicable, for temporary irrigation needed to establish the vegetative cover during early stages of the CREP contract.

C C/S Assistance for Conservation Practices

The provisions for C/S payments for CREP practices shall adhere to those established for other CRP C/S according to this handbook.

States or other entities may provide additional C/S assistance or in-kind services. Other Federal agency C/S is subject to the provisions of Part 15.

Federal C/S to develop public access habitat improvements under the provisions of the 1985 Act, Section 1240R is not authorized.

**Important:** C/S payments from all sources may not exceed 100 percent of the participant’s practice installation cost. PIP and incentive to restore hydrology payments, although practice-related, are not C/S payments.

D CCC “One-Time” Incentive Payments

PIP, SIP, and incentive to restore hydrology for wetland restoration practices incentive payments may be included in a CREP Proposal and agreements according to this handbook.

PIP, SIP, and incentive to restore hydrology incentive payments are subject to the $50,000/person annual payment limitation provisions.

**Note:** IRS may also treat these one-time payments as CRP annual rental payments for tax purposes.
E  State or Tribal Incentives

State, Tribal, or private entities **must** provide additional financial incentives to participants as part of the State’s 20 percent matching funds as outlined in subparagraph B. Additional non-Federal incentives could include direct payments to participants such as C/S assistance, lump-sum signing payments, and easement purchases and **must** be specified under the terms and conditions of the Agreement.

**Note:** Although FSA will not disburse or manage State payments, FSA may provide copies of those forms and related CRP/CREP documents which are legally releasable to State CREP partners under Federal privacy laws to help State agencies calculate and disburse State payments.
A State and National Significance

To be eligible for CREP, a project must meet requirements in subparagraph 771 B and address:

- environmental issues related to agricultural use
- resource issues of State and national significance.

A resource issue must meet at least 1 of the following criteria:

- project is located in an area where agriculture is an important element of the regional economy, and the long-term viability of agriculture is threatened because of agricultural-related environmental conditions

- project would measurably improve water quality in areas where it currently does not meet designated use standards, such as areas identified according to studies conducted under the Clean Water Act, Section 305

- project would mitigate nonattainment of air quality standards because of agricultural activities

- project would provide significant restoration of a species on or identified as candidates for listing on the Federal Endangered Species List

- project would mitigate adverse agricultural impacts on important segments of the regional economy, such as recreational use, transportation, fisheries, etc.

- project would ensure the preservation of a unique geographic region, which represents 1 of the most important examples of a particular resource type in the country, such as a designated national natural landmark

- project would target restoration of wetlands or severe drought-impacted region for which water savings is critical for natural resource conservation

- project would improve wildlife habitat as part of public access, only if consistent with the purposes of CREP and underlying CREP agreement.

Note: The 1985 Act, Section 1240R provides that the Secretary shall, in approving applications and awarding grants under the Public Access program, give priority to States and tribal governments that propose to strengthen wildlife habitat improvement efforts on land enrolled in CREP by providing incentives to increase public hunting and other recreational access on that land.
**Project Requirements (Continued)**

**B Land Eligibility**

Only cropland and marginal pastureland may be eligible for enrollment in a CREP in accordance with the provisions of this handbook and the CRP regulations at 7 CFR Part 1410.6. Cropland and marginal pastureland shall meet all 3-CM and 2-CRP provisions. No other land is eligible for CREP.

**Note:** CREP cropland contract acres are subject to the total county cropland limit eligibility provided in Part 4.

General signup practices, as specified in the CREP agreement, may be eligible to be enrolled into continuous CREP, provided all other eligibility requirements are met according to paragraphs 151 and 181, if the land being offered is within the CREP project area, and 1 of the following are met:

- land offered is either within a national or State CPA
- land offered has EI of greater than 8.

**Exception:** General signup practices may be eligible to be enrolled within CREP without requiring the cropland to be within a national or State CPA, or EI greater than 8 provided that CREP is specifically targeted for water savings.

**C Ownership Eligibility**

Ownership requirements for eligible cropland and marginal pastureland under CREP are the same as for CRP.

**D Number of Requests and Maximum Project Size**

States or Tribal governments may submit 1 or multiple CREP project proposals, but the limitation for CREP allocations per project shall not exceed 100,000 acres for each State. Project size should be based on the land area needed to address the specified objectives in a cost-effective manner. This acreage limitation may be waived based on unique site conditions, program performance, and acreage availability. Any condition for renegotiation of the agreement to waive the 100,000-acre limitation will be specified in the Agreement. CREP Proposals should provide acreage targets by practice, and targets or limits by any applicable geographic and/or other targeted criteria.
E Conservation Practices

Conservation practices authorized for CREP must be consistent with practices authorized for CRP in Exhibit 11 and meet NRCS FOTG standards.

CREP proposals may do either of the following:

• limit the approved practices to 1 or 2 specific practices
• permit a justified variety of CRP practices.

A proposal may request a modification of an existing CRP practice. If such a modification is proposed, sufficient justification and supporting material, and technical details to support the need for the modification must be provided in the CREP Proposal. The modification will only be approved if it is technically feasible and necessary to accomplish program objectives.

Note: FWP and/or SAFE practices are not eligible for enrollment under CREP.

F Statute and Regulations

State CREP programs must be fully consistent with the statute and regulations governing CRP.

Note: Statutory authority to enroll lands under CRP/CREP follows the statutory authority to enroll lands under CRP subject to the provisions of the CREP agreement and the availability of acres and funds.

Example: CCC has no authority to approve any of the following:

• paying C/S in excess of 50 percent
• exceeding the $50,000 payment limitation
• exempting the AGI provisions.

Exception: See paragraph 131.

G Project Duration

The duration of contracts to be offered under CREP shall be a minimum of 10 years, but not to exceed 15 years.
A Interagency Coordination of CREP Project Proposals

Establishing an interagency team of Federal and State agencies to coordinate developing the CREP proposal is recommended. The State Technical Committee may serve as the core group in developing the proposal. Consideration should be given to involving the following Federal and non-Federal entities in developing the proposal:

- FSA
- NRCS

Note: NRCS at the State level shall be available to provide the estimated technical assistance cost for all CREP projects.

- NIFA
- Tribal Representative
- Governor’s office
- State Water Quality Agency
- administrators of any other technical agency providing technical assistance for water quality projects
- State Conservation District Agency
- Local Soil & Water Conservation District
- FWS
- State Fish and Game Department
- State Department of Agriculture, or equivalent
- State Forestry Department
- EPA
- USGS
- NGO’s.
B Joint Efforts in Conjunction With States on Local Initiatives

Every effort shall be made, both at the State and local levels, to ensure that CREP represents a cooperative effort.

Where there are agricultural conservation projects already existing or planned, CREP proposals should show that CREP will be part of a coordinated effort.

C Local Support

It is imperative that CREP proposals reflect strong local support from producers and the public. Consideration should be given to encouraging the following local groups to participate:

- agricultural producers
- soil and water conservation districts
- farm-related organizations
- commodity groups
- outdoor recreation groups
- environmental groups
- forestry organizations
- civic groups
- other public interest groups.

D Commitments From Other Agencies

Each proposal submitted shall include a description of the extent of financial, personnel, and/or other resource commitments for the project from:

- the Governor, for various State agencies
- the Tribal Representative
- any other non-Federal funding sources.

E Technical Assistance

The proposal must specify the primary State or Federal agency proposed to perform technical assistance.
### A Developing and Approving CREP Proposals

The following outlines the process for developing and approving CREP proposals.

<table>
<thead>
<tr>
<th>Item</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Establish an interdisciplinary/intergovernmental State planning team to develop a CREP proposal.</td>
</tr>
<tr>
<td>2</td>
<td>Provide members of the planning team a copy of this handbook, if applicable.</td>
</tr>
<tr>
<td>3</td>
<td>Use these guidelines to develop the CREP proposal. Proposals should be clear, concise, and brief, generally not exceeding 30 pages in length. Supplementary material may be submitted, but should be provided as an attachment to the proposal. FSA State Office begins drafting EA using an interdisciplinary team consisting of the FSA Conservation Program Specialist, SEC, and other representatives as needed. EA must be approved by FSA’s National Environmental Compliance Manager and published before approval of the CREP agreement.</td>
</tr>
<tr>
<td>4</td>
<td>Solicit public input on the proposal. In particular, comments should be solicited from affected producers and incorporated into the proposal.</td>
</tr>
<tr>
<td>5</td>
<td>The Governor or Tribal representative shall submit the proposal to the Secretary and provide a copy to the Program Manager.</td>
</tr>
<tr>
<td>6</td>
<td>A national CREP group shall conduct an interagency review of the proposal and submit comments to the Governor or Tribal representative within 60 calendar days. Generally, the CREP Program Manager or CEPD representative will meet to discuss the proposal with State representatives.</td>
</tr>
<tr>
<td>7</td>
<td>The CREP planning team shall revise the proposal, as necessary, based on comments and agreed upon changes.</td>
</tr>
<tr>
<td>8</td>
<td>Following initial approval of a proposal, the Governor shall submit a draft agreement along with the revised CREP proposal to CEPD, attention CREP Program Manager.</td>
</tr>
</tbody>
</table>
| 9    | FSA State office, working with other Federal and State CREP partners, will develop State-specific CREP procedures. The procedures:  
  - are developed and published as a supplement to this handbook  
  - must be approved by the Program Manager before CREP enrollment begins  
  - must reiterate FSA State and County Office compliance with 3-INFO privacy act requirements in CREP signup operations including other CREP partners. |
| 10   | The Program Manager, in consultation with OGC and CRP managers, and the Governor or Tribal Representative, shall negotiate the final terms for the agreement. |
| 11   | The Secretary of Agriculture and Governor or Tribal Representative, or their designees, as appropriate, shall sign the agreement. |
A Format

Project proposals shall be prepared according to this paragraph.

- Separate required information into sections as described.
- Be brief and put information in bulleted lists, tables, or short narratives.
- Avoid excessive narrative.
- Submit an electronic copy in MS Word.

B Cover Sheet

On the cover sheet, enter the following:

- project name
- State
- counties where the project is to be located.

C Section 1 - Abstract

Provide a brief abstract of the project not to exceed 1 page, which includes the following:

- description of the project purpose and area
- summary of existing conditions and agricultural impacts to be addressed
- brief description of the project
- CRP practices proposed
- estimated number of acres to be contracted under the CREP project
- estimated cost of the project.
D Section 2 - Existing Conditions

Provide a discussion of existing conditions that includes all of the following:

• why the project area is of State or national significance based on the criteria in this paragraph

• a detailed map outlining the geographic area of the proposal

• a description of the various human activities and land uses within the project boundary, such as cropland, range land, forest, urban, etc., including a summary of all land uses within the watershed/project area

• a description of farm demographics within the project boundary watershed, including number of farms, types of farms, average size of farm by type, etc.

• a brief description of relevant environmental factors, including the following:
  • precipitation
  • soil
  • important geological features
  • vegetation patterns
  • wildlife
  • water resources
  • air quality
  • Federally listed endangered and threatened species.

E Section 3 - Agriculture-Related Environmental Impacts

This analysis must include the following:

• magnitude of agriculture-related environmental impacts

• past and projected future trends in agricultural impacts

• nature of any health-related agricultural impacts

• past, ongoing, and projected future efforts to address agricultural impacts through State and Federal programs, including the number of acres in the project area currently under CRP, EQIP, and WRP.
**F Section 4 - Project Objectives**

CREP proposals shall include specific and measurable project objectives as well as documentation for the derivation of the objectives.

**Example:** Implementation of the project will reduce sediment loading by 2,000 tons per year resulting in a saving of $2 million per year in reduced dredging costs.

**G Section 5 - Project Description**

The project description **must** address each of the following:

- CRP conservation cropland/marginal pastureland practices to be adopted
- number of acres targeted by practice proposed to be contracted in the CREP agreement
- length of time for project implementation
- an analysis of the likelihood that project objectives will be met
- interagency coordination method that includes how producer eligibility determinations will be made, which agency or agencies will provide technical assistance, how the application process will be coordinated among agencies, and how contract compliance will be monitored
- a flow chart of the application process.
H Section 6 - Cost Analysis

CREP proposals must include a thorough discussion of project costs that addresses the following:

- total estimated project costs
- itemization of costs to be funded from non-Federal revenues, including a discussion of the status of these funds
- thorough justification for any incentive payments.

I Section 7 - Monitoring Program

CREP proposals must include a monitoring and evaluation plan that can be used to measure the success of the project. The monitoring plan is to include the following:

- a description of the data to be collected and methods to be used to carry out the monitoring plan
- delineation of responsibilities for carrying out the monitoring plan
- provision of annual reports to describe monitoring results
- provision for project modification if objectives are not being met.
J Section 8 - Public Outreach and Support

CREP proposals must provide a discussion of the nature of public support, especially from producers. This must include a program for public outreach over the duration of the project.

K Section 9 - Development of Procedure

Before beginning any CREP, FSA, working with Federal and State CREP partners, shall complete an approved detailed supplement to this handbook for implementing CREP. The supplements must:

- be approved by the Program Manager before the start of signup
- be incorporated into this handbook as a supplement
- include information sharing provisions with State CREP partners consistent with the information provisions of 1-INFO, 2-INFO, and 3-INFO.

Note: The supplements must ensure that CRP/CREP information subject to the Privacy Act collected by FSA from producers is managed according to 1-INFO, 2-INFO, and 3-INFO. State CREP partners that need information subject to the Privacy Act to administer their portions of the CREP agreement must collect this information in their own State forms.

L Section 10 - Training of Staff

CREP proposals should describe the measures that will be taken to train staff. FSA, working with Federal and State CREP partners, must develop and provide training on CREP procedures for Federal and appropriate State, local, and private partner staff.

M Section 11 - Communication Plan

CREP proposals shall describe the measures that will be taken to develop and implement a communication plan. FSA, working with Federal and State CREP partners, must develop a communication plan that will promote outreach activities for CREP. The communication plan must include the following:

- goals and objectives
- motivators to enrollment
- barriers to enrollment
- communication tools and materials
- training.
A Partnership

SED is responsible for:

- developing partnerships to assist in ensuring that CREP objectives are achieved
- ensuring that all appropriate parties are informed of CREP activities
- developing and implementing an outreach program
- ensuring that the integrity of the FSA data is used to manage CREP.

Notes: Data integrity requires that all data be entered into the appropriate data platform on a timely and accurate basis.

To ensure that all FSA and State obligations are fully met, the data must be loaded in a timely manner.

B Annual Performance Report

Each agreement will require that the State provide an annual performance report. The date of the performance report will be specified in each agreement. The report is a tool to determine program accomplishments and program changes to ensure that the program goals are achieved in a cost-effective manner. The annual performance report must include, at a minimum, the annual FY performance for the following:

- acres enrolled by practice
- acres of easement or long-term contract
- acres enrolled by county
- cumulative performance for the following:
  - acres enrolled by practice
  - acres of easement or long-term contract
  - acres enrolled by county
B Annual Performance Report (Continued)

- financial report listing by Federal FY and cumulative expenditures for both Federal and State/private entities as follows:
  - annual rent
  - C/S
  - lump-sum incentive payment
  - in-kind technical assistance cost (State/private only)
  - monitoring and evaluation costs (State only)

- progress in meeting program goals, describing:
  - progress at meeting the goals and objective of the proposals
  - monitoring and evaluation program and results of their evaluation
  - success stories
  - partnership effort.

Reports must be submitted to the CEPD, attention CREP Program Manager no later than 15 calendar days from the due date specified in the agreement.

C FSA Quality Control

SED shall ensure that program implementation is consistent with the statute, regulations at 7 CFR Part 1410, agreements, and procedures of this handbook.

This may require periodic COR reviews, spot checks, and reviews by FSA State Offices. If deficiencies are found, SED shall ensure that appropriate corrective actions are taken.

779-800 (Reserved)
A Background

The Food, Conservation, and Energy Act of 2008 amendments to the Food Security Act of 1985, as amended, authorized $25 million for the voluntary transition of land enrolled under an expiring CRP contract from a retired or retiring owner or operator to a beginning or SDA farmer or rancher to return the land to production for sustainable grazing or crop production.

Retired or retiring owners and operators who qualify under TIP may be eligible to receive annual rental payments for up to 2 additional years after the CRP-1 expiration date provided the transition is not to a family member as defined in Exhibit 2.

Note: Family members of the retired or retiring owners or operators may participate in TIP; however, the additional 2 years of annual rental payments will not be paid.

B TIP Regulation

An interim rule was published in the FR on May 14, 2010, which provides regulatory authority for TIP.

C Signup Period for TIP

Eligible retired or retiring owners and operators and beginning or SDA farmers or ranchers may enroll in TIP on a continuous basis beginning on May 17, 2010.

To be considered eligible, beginning or SDA farmers or ranchers and CRP participants must enroll in TIP during the period beginning 1 year before the CRP contract expiration date and *--the earlier of the following:

- August 15 of the year when the CRP contract is scheduled to expire
- $25 million statutory limit has been reached.

Note: The August 15 deadline is to allow NRCS or TSP the required time to complete the TIP sustainable grazing or crop production conservation plans.--*

For contracts that expired on September 30, 2008 and 2009, or are scheduled to expire on September 30, 2010, TIP enrollment may begin immediately. Signup for contracts that expired on September 30, 2008, or September 30, 2009, ends on September 30, 2010.

CRP-1R’s for CRP contracts already expired must be approved by October 1, 2010.
A Eligible Land for TIP

All or a portion of land under an expiring CRP contract may be eligible to enroll in TIP, if COC or CED determines that all of the following have been met:

- producer eligibility requirements in paragraph 803
- land eligibility requirements in subparagraph 804 B for contracts scheduled to expire on or after September 30, 2010

Note: See subparagraph 804 A for contracts that expired on September 30, 2008, or September 30, 2009.

- land under CRP-1 is in compliance according to 2-CRP, Part 17.

B Easement Eligibility for TIP

Land expiring from CRP-1 under an easement that would prohibit the land from being farmed in a sustainable manner is not eligible to be enrolled under CRP-1R.
803 Eligible Producers

A Retired or Retiring Owner or Operator Eligibility

To be eligible for TIP, producers must be retired or retiring owners or operators on land under an expiring CRP contract. See Exhibit 2 for definition.

Notes: An owner or operator that has livestock may meet the definition of retired or retiring farmer or rancher, provided that the livestock producer is no longer a producer of an agricultural crop. The livestock producer must certify that he or she will cease active labor in farming as a producer of agricultural crops on CRP-IR.

Absentee landowners, who are not providing active labor as producers of agricultural crops, may be eligible as a retired or retiring farmer or rancher, provided all other eligibility requirements are met.

One or more participants under CRP-1 may be eligible to transition land to a beginning or SDA farmer or rancher and enroll in TIP if all of the following have been met:--*

• at least 1 participant on an expiring CRP-1 is a retired or retiring farmer or rancher on the land as self-certified on CRP-1R

• persons or entities on the expiring CRP-1 must receive, in the aggregate, at least 50 percent of the annual rental payments

Note: The retired or retiring members of an entity must own at least 50 percent of the stock of the entity to be eligible for TIP.

• retired or retiring owner or operator agrees to sell, has a contract to sell, or leases the land for a minimum of 5 years to a beginning or SDA farmer or rancher before CRP-1R begins

Notes: See paragraph 807

In the case of a long-term lease, the lease must be a nonrevocable long-term lease of at least 5 years, with or without an option to purchase the land, which must begin on the CRP-1R beginning date.--*

• retired or retiring owner or operator and beginning or SDA farmer or rancher have signed CRP-1R according to paragraph 805
A Retired or Retiring Owner or Operator Eligibility (Continued)

- retired or retiring owner or operator agrees to allow beginning or SDA farmer or rancher to make conservation and land improvements, according to a modified conservation plan approved by NRCS or TSP, beginning on the date COC or CED approves CRP-1R according to paragraph 806.

Notes: Land improvements in the last year of the CRP contract under CRP TIP will not be permitted during the primary nesting season unless CRP-1 cover was already disturbed because of allowable land improvements started before the first day of the primary nesting season.

*--If land improvements are to be made in the last year of CRP-1 according to paragraph 806, CRP-1 participants must modify the CRP conservation plan according to the recommendations of NRCS or TSP.

Important: CRP participants:

- are responsible for the land under an expiring CRP-1 until that CRP-1 expires
- must modify the CRP-1 conservation plan if land improvements are to be made during the last year of CRP-1.

When 1 or more retired or retiring owners or operators on a CRP contract agree to transition their portion of the land under CRP-1 to beginning or SDA farmer or rancher, CCC may approve CRP-1R provided all signatories to CRP-1 sign CRP-1R and all other eligibility criteria are met. The land transfer must not have taken place until after participants have signed CRP-1R.

Note: All signatories to CRP-1 are not required to be retired or retiring; however, all CRP-1 signatories are required to sign CRP-1R. At least 1 participant with at least 50 percent share on CRP-1 must meet the retired or retiring farmer criteria. If all signatories on CRP-1 do not agree to sign CRP-1R, then the land is not eligible under TIP.

Example 1: Three participants have equal shares in an expiring CRP contract. Two of the participants are retiring and intend to participate in TIP. The land is eligible for TIP because the shares of the 2 retiring participants equal at least 50 percent provided all signatories sign CRP-1R and all other eligibility criteria have been met.

Example 2: Four participants have equal shares in an expiring CRP contract. Two of the participants are retiring and intend to participate in TIP. The land is eligible for TIP because the shares of the 2 retiring participants equal at least 50 percent provided all signatories sign CRP-1R and all other eligibility criteria have been met.
A Retired or Retiring Owner or Operator Eligibility (Continued)

Example 3: Five participants have equal shares in an expiring CRP contract. Two of the participants are retiring and intend to participate in TIP. The land is **not** eligible for TIP because the shares of the 2 retiring participants do **not** equal at least 50 percent of the shares on the expiring CRP contract.

*--Notes: All CRP-1 shareholder signatories are eligible to receive the 2 years annual rental payments provided they have signed CRP-1R, are otherwise eligible, and the provisions of this paragraph are met.

TIP payments will be issued according to the shares at the time CRP-1 expires.--*

B Beginning or SDA Farmer or Rancher Eligibility

A beginning or SDA farmer or rancher may be eligible for TIP provided the beginning or SDA farmer or rancher agrees to **all** of the following:

- buy or lease (under a long-term lease of at least 5 years) the land under CRP-1 from a retired or retiring owner or operator during the last year of CRP-1 before its scheduled September 30 expiration
- develop and implement the required conservation plans according to paragraph 806
- self-certify and sign CRP-1R.

Notes: A minor combined with a parent or legal guardian in a farming operation under 4-PL, would not meet beginning farmer or rancher criteria until the minor is of legal age and no longer combined. In rare cases, where COC has determined the minor stands alone and is not combined with a parent or legal guardian, the minor may meet the beginning farmer or rancher definition provided COC determines the minor materially and substantially participates in the operation of the farm or ranch involved in CRP-1R.

For TIP, the definition of SDA farmer or rancher does **not** include gender. See Exhibit 2
A TIP for CRP-1’s That Expired September 30, 2008, or September 30, 2009

Generally, TIP only applies to CRP-1’s that expire on September 30, 2010, or later. However, retired or retiring owners or operators with CRP-1’s that expired on September 30, 2008, and September 30, 2009, may be eligible to enroll in TIP provided all of the following apply:

- the land has not been sold or leased before signing CRP-1R
- producers are otherwise eligible under TIP provisions
- the conservation plan is modified to require sustainable grazing or crop production methods
- CRP-1R beginning date is October 1, 2010
- *--CRP-1R is approved by COC or CED no later than October 1, 2010.--*

The following provides examples for expired CRP-1’s enrolled in TIP.

<table>
<thead>
<tr>
<th>CRP-1 Expiration Date</th>
<th>Final CRP-1 Annual Rental Payment</th>
<th>CRP-1R Beginning Date</th>
<th>First Scheduled TIP Payment</th>
<th>Second Scheduled TIP Payment</th>
</tr>
</thead>
</table>

Notes: Retired or retiring owners and operators who qualify under TIP may be eligible to receive annual rental payments for up to 2 additional years after the CRP-1 expiration date provided the transition is not to a family member as defined in Exhibit 2.

Members of the retired or retiring owner’s or operator’s family may participate in TIP; however, the additional 2 years of annual rental payments cannot be paid.

Land leased or sold before CRP-1R is signed is not eligible under TIP.
B TIP for CRP-1’s That Expire on or After September 30, 2010

Generally, land subject to CRP-1R must be returned to production using sustainable grazing or crop production methods.

Beginning on October 1 that is 1 year before the CRP-1 scheduled expiration date of September 30, the retired or retiring owner or operator may sign CRP-1R to allow the beginning or SDA farmer or rancher to do 1 or more of the following:

• modify the current CRP-1 conservation plan to begin conservation and land improvements

  Note:  CRP-1 signatories are responsible for the CRP cover until CRP-1 expires. If land improvements are to be made in the last year of CRP-1, CPO must be modified by CRP-1 participants.--*

• begin the certification process under the Organic Foods Production Act of 1990

• offer eligible land into continuous CRP.

  Note:  Land improvements in the last year of the CRP contract under CRP TIP will not be permitted during the primary nesting season unless CRP-1 cover was already disturbed because of allowable land improvements started before the first day of the primary nesting season.

If all other eligibility requirements are met, the beginning or SDA farmer or rancher with an approved CRP-1R is eligible to offer transitioned land for continuous CRP according to Part 6, Section 1.

*--Note:  Eligible beginning or SDA farmers or ranchers with an approved CRP-1R will be eligible to re-enroll, beginning on May 1 of the year CRP-1 expires, partial field continuous conservation practices in CRP, according to a CRP conservation plan and the provisions of TIP. The re-enrolled acres will become effective on October 1 following the expiration of CRP-1 of the qualified retired or retiring owner or operator, provided that the beginning or SDA farmer or rancher has control of the property and meets all other qualifying conditions of CRP.--* 

The beginning or SDA farmer or rancher enrolling into continuous CRP is not required to meet 12-month owner/operator criteria for acres under CRP-1R.

In cooperation with NRCS, County Offices must inform the beginning or SDA farmer or rancher to contact NRCS for more information about the opportunity to enroll in CSP or EQIP. Enrollment in CSP or EQIP must begin October 1, on or after CRP-1 expires.

Note:  Land under CRP-1R is not eligible to be enrolled into general signup.

805 CRP-1R Signature Requirements

A Required Signatures

CRP-1R must be signed by all of the following:

- retired or retiring owners or operators
- beginning or SDA farmer or rancher
- all signatories to CRP-1.

Exception: See subparagraph 335 C for signature requirement exceptions.

Note: See paragraph 810 for an example of CRP-1R.

*806 Required Conservation Plans for TIP

A Beginning or SDA Farmer or Rancher TIP Conservation Plan Requirements

During the last year of CRP-1 before its scheduled expiration, the beginning or SDA farmer or rancher must develop a conservation plan that meets acceptable standards for sustainable grazing or crop production methods to be implemented beginning on the approved CRP-1R beginning date (item 8 A). The sustainable grazing and crop production methods must be designed as a part of an overall plan defined on an ecosystem level to be useful in creating integrated systems of plant and animal production practices that have a site-specific application that would:

- meet human needs for food and fiber
- enhance the environment and the natural resource base
- use nonrenewable resources efficiently
- sustain the economic viability of the farming operation.

The beginning or SDA farmer or rancher must complete all of the following for acres under CRP-1R:

- **sustainable grazing or crop production conservation plan** that meets NRCS FOTG for sustainable grazing or crop production methods according to this paragraph to be effective on the CRP-1R beginning date

- conservation plan according to Conservation Compliance Provisions of the 1985 Act that requires completing AD-1026 for HEL

- **CRP conservation plan** that meets the requirements for continuous CRP, CSP, or EQIP, as applicable, if enrolling the acres in 1 or more of these programs that are under CRP-1R after CRP-1 expires.---*
B Retired or Retiring Owner or Operator Conservation Plan Requirements

Beginning on the first day of the last year of CRP-1, retired or retiring CRP participants with an approved CRP-1R must allow the beginning or SDA farmer or rancher to install certain conservation practices and institute land improvements that are consistent with the conservation plan during the last year of CRP-1 according to an approved modified conservation plan in consultation with NRCS or TSP.

Note: The retired or retiring farmer or rancher must, in consultation with FSA and NRCS or TSP, ensure that the CRP-1 conservation plan has been modified for land improvements agreed upon with the beginning or SDA farmer or rancher. The retired or retiring owner or operator is responsible for ensuring that the conservation plan is modified if land improvements are being made on land under CRP-1.

The following are allowable conservation and land improvements in the last year of CRP-1 under TIP, according to an approved modified conservation plan:

- preparing the land for certified organic food production
- laying out contours for contour buffer strips
- surveying and site preparation for contour farming
- installing filter strips
- installing fencing
- installing livestock watering facilities
  
  Note: Grazing is not allowed before CRP-1 expiration.

- installing pipelines
- installing ponds
- installing terraces
- installing water wells
- installing waterways—*
B Retired or Retiring Owner or Operator Conservation Plan Requirements (Continued)

- other potential improvements for re-enrolling acres into continuous CRP according to NRCS or TSP guidelines
- other appropriate practices as recommended by NRCS or TSP.

Notes: Land improvements in the last year of CRP-1 under CRP TIP will not be permitted during the primary nesting season unless CRP-1 cover was already disturbed because of allowable land improvements started before the first day of the primary nesting season.

Land improvements in the last year of CRP-1 do not include planting a commodity crop except when used as a temporary cover establishing conservation practices.

CRP C/S assistance is not authorized for TIP.

Using other Federal C/S assistance requires refund of CRP C/S assistance according to subparagraph 491 B.

Generally, only the acres under CRP-1R must be returned to sustainable grazing or crop production methods.

Notes: CRP-1 provisions continue to apply through its expiration for land not covered by CRP-1R.

For expired CRP-1 land that is not enrolled in an approved TIP CRP-1R, the land may be returned to an agricultural commodity using normal crop production methods in compliance with Conservation Compliance Provisions of the 1985 Act. See 6-CP.

C TIP and Early Land Preparation

Certain conservation and land improvements are allowable in the last year (beginning October 1 of the year CRP-1 expires) of CRP-1 as provided in subparagraph B.

Early land preparation provisions in paragraph 637 generally apply to land enrolled under a TIP modification to CRP-1. However, if the desired early land preparation activity conflicts with acceptable standards for sustainable grazing or crop production, then early land preparation provisions must not be used.

Important: TIP participants requesting early land preparation must follow all of the provisions in paragraph 637.*
C TIP and Early Land Preparation (Continued)

Activities allowable under TIP in the last year of CRP-1 relates to conservation and land improvements. As a general matter, destruction of the cover before CRP-1 is expired should not be approved. If, however, in the extraordinary case where NRCS or TSP determines that allowing the cover to be disturbed in the last year of CRP-1 to prepare to plant an agricultural crop after CRP-1 expires meets the criteria of a sustainable conservation system, the CRP conservation plan may be modified.--*

807 Approving CRP-1R’s

A Requirements Before CRP-1R Approval

Before approving CRP-1R’s, County Offices shall:

- ensure that a separate CRP-1R is completed and signed for each expiring CRP-1 enrolled in TIP

*--Note: CRP-1R must be approved no later than September 30 of the year CRP-1 expires. See the exception in subparagraph 804 A.

- determine acres to be transitioned

- ensure that the retired or retiring owner or operator and beginning or SDA farmer or rancher has completed all required conservation plans according to paragraph 806, as applicable--*

- ensure retired or retiring owners or operators have provided sufficient evidence that the land entered into under TIP will be either sold or long term leased to a beginning or SDA farmer or rancher effective the day the CRP-1R begins.

Note: Sufficient evidence must include 1 of the following:

- written long term lease (at least 5 years duration)

- contract for deed

- statement signed by TIP participants reflecting either the long term lease or contract to sell.
Approving CRP-1R’s (Continued)

*--B COC or CED Approval of CRP-1R’s

COC or CED shall approve CRP-1R’s if all of the following are met:--*

• all required signatures have been obtained on all related CRP forms and conservation plans according to paragraphs 805, 806, and 808

• a modified conservation plan is approved for land improvements in the last year of CRP-1, if applicable--*

• the conservation plan is consistent with polices in Part 11

• all producer eligibility criteria has been met

• all land eligibility criteria has been met

• sufficient evidence has been provided according to subparagraph A.

C COC Responsibilities

COC or designee shall:

• approve/disapprove CRP-1R, as applicable

• sign and date CRP-1R

• follow conflict of interest provisions in 22-PM.

*--Note: COC or CED shall not approve CRP-1R until all requirements in subparagraph B--*

D Approval Responsibilities

Follow the provisions for approval responsibilities for CRP-1R’s according to subparagraph 401D.

E County Office Action

After requirements in subparagraphs A through D have been met, notify the retired or retiring owner or operator and the beginning or SDA farmer or rancher in writing of approval/disapproval of CRP-1R’s.
A CRP-1R Duration

CRP-1R begins on October 1 that is the day after the CRP-1 scheduled expiration date and ends 2 years following the CRP-1 expiration date of September 30.

Exception:  For CRP contracts that expired in 2008 or 2009, the beginning date of CRP-1R is October 1, 2010.

Note: Preparing or installing certain conservation practices may occur up to 1 year before the beginning date of CRP-1R according to paragraph 806.

Example: A retired operator has land under CRP contract that expires on September 30, 2010. The retiring operator and SDA farmer signed CRP-1R on June 14, 2010, and the retired operator modified the CRP-1 conservation plan to make conservation land improvements in the last year of CRP-1. COC or CED approved the modified conservation plan and CRP-1R on August 1, 2010. CRP-1R goes into effect October 1, 2010.

B CRP-1R Payments

Retired or retiring owners or operators with an approved CRP-1R may receive up to 2 additional annual rental payments after CRP-1 expires provided that the retired or retiring owner or operator is not a family member of the beginning or SDA farmer or rancher according to the definition of family member in Exhibit 2.

Note: See:

- Exhibit 60 for general information about TIP payments
- Exhibit 61 for additional information about recording TIP payments
- Exhibit 62 for handling contract modifications for payment processing.

Example: The retired or retiring farmer and a nonfamily member beginning or SDA farmer or rancher completed and signed CRP-1R on May 17, 2010, for CRP-1 scheduled to expire on September 30, 2010. The CRP-1R period is October 1, 2010, through September 30, 2012. The retired or retiring owner or operator may receive the first CRP-1R payment after October 1, 2011, and the final TIP payment after October 1, 2012, provided all other payment eligibility criteria are met.
808 CRP-1R Provisions (Continued)

C CRP TIP Payment Limitation

Payment limitation as applicable for other CRP-1’s will be applied to CRP-1R annual rental payments.

D CRP TIP AGI Provisions

The AGI determination of the expiring CRP-1 will continue for the additional 2 years for annual rental payments under TIP.

E Succeeding to CRP-1R

*--A new owner of land, purchased from the retired owner or operator, that was transitioned under TIP and is under a long-term lease with a beginning or SDA farmer or rancher, may succeed to an approved CRP-1R, provided the successor continues to honor the lease with the beginning or SDA farmer or rancher and all the provisions of CRP-1R are met.

Important: To ensure TIP payments are issued correctly, all succession-in-interest to CRP-1R’s must be reported to Kimberly Wright, CEPD, Conservation Automation Branch, by e-mail at kimberly.wright@wdc.usda.gov.--*
Modifications to CRP-1R’s for Payments

Allowable modifications to TIP CRP-1R’s are:

- TIP contract number on CRP-1R and on the TIP spreadsheet must be identical to the CRP-1 number in the System 36 CRP Contract File at the time CRP-1 expires for TIP payments to be processed and issued.

  Note: Any revision to CRP-1 number in the last year of CRP-1 must be revised on the approved TIP CRP-1R.

  Example: If CRP-1 number is 314A when CRP-1 expires, then CRP-1R number must be 314A-TIP. See 2-CRP, subparagraph 810 A, item 2 for TIP CRP-1R numbering procedure.

- TIP acres must be less than or equal to the acres on the expiring CRP-1.

  Notes: If the acres being transitioned are less than the expiring CRP-1 acres, then CRP-1 must be revised in System 36 before CRP-1 expires to reflect the correct acres being transitioned. See 1-CRP for procedure for revising CRP-1’s.

  Before TIP payments can be issued, the data on CRP-1R and the System 36 CRP Contract File for the expiring CRP-1 must match.

  Example: Changes to CRP-1 that will require a revision to CRP-1R are:

  - CRP-1 numbers
  - CRP-1 corrections
  - CRP-1 participants and shares.

  Note: Unless correcting a data entry error, the following CRP-1R fields must not be changed:

  - Rental Rate Per Acre CRP-1
  - CRP-1R Beginning Date
  - CRP-1R End Date.--*
A Targeting Beginning or SDA Farmers or Ranchers

FSA will announce TIP through press releases, newsletters, and any other available means. In addition, State and County Offices must conduct additional outreach activities to ensure participation of beginning or SDA farmers or ranchers.

For outreach efforts specific to this notice, State Offices must ensure, using all available means, that beginning or SDA groups are informed of the opportunities provided under TIP.

State Offices must prioritize efforts to plan targeted outreach activities jointly with partner organizations whose mission specifies service to target groups as beginning or SDA farmers or ranchers.
A Instructions for Completing CRP-1R

Complete CRP-1R according to the following.

<table>
<thead>
<tr>
<th>Item</th>
<th>Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Enter State and county code and administration location.</td>
</tr>
</tbody>
</table>
| 2    | Enter CRP-1R number.  
  **Note:** Expiring CRP-1 contract number from CRP-1, item 3, plus the extension “TIP”.  
  **Example:** 567-TIP |
| 3    | Enter acres for enrollment into TIP. |
| 4    | Enter farm number. |
| 5    | Enter tract number. |
| 6    | Enter County Office address and telephone number. |
| 7    | Enter rental rate/acre from CRP-1, item 7. |
| 8A   | Enter TIP beginning date (beginning date of CRP-1R). See subparagraph 808 A. |
| 8B   | Enter TIP ending date (ending date of CRP-1R). See subparagraph 808 A. |
| 9    | Retired or retiring owner or operator and beginning or SDA farmer or rancher shall read the self-certification statement. |
| 10   | Participants shall read and fill in the CRP contract number. |
| 10A  | Require retired or retiring owner or operator to print name, enter share on CRP-1, sign, and date. |
| 10B  | Require beginning or SDA farmer or rancher to print name, sign, and date.  
  **Note:** Do not enter share for beginning or SDA farmer or rancher. |
| 10C  | Require CRP-1 signatories to print name, enter share on CRP-1, sign, and date. |
| 11   | *--COC or CED approves CRP-1R.--* |
**B  Example of CRP-1R**

The following is an example of CRP-1R.

812 Managing CRP-1R TIP Contracts and Spot Check Policy

A Participant Responsibilities

All signatories on a CRP-1R are jointly and severally responsible for complying with the terms and conditions of CRP-1R.

Exception: Only signatories that have a share of CRP-1R and the beginning or SDA are responsible for compliance. Zero share CRP-1R signatories are not jointly responsible.

B Examples of Violations under TIP

COC shall consider a participant to be in violation of CRP-1R if:

- retired or retiring and/or beginning or SDA withdraws CRP-1R after signing CRP-1R
- participants voluntarily break long term lease or contract for deed after signing CRP-1R
- participants erroneously self-certified to TIP definitions according to paragraph 803

Note: COC will use personal knowledge to determine accuracy of self-certification on CRP-1R.

- participants do not follow the applicable conservation plan for TIP.

Notes: County Office will spot check 15 percent of TIP conservation plans until enrollment into TIP reaches the minimum number needed to draw a statistically reliable sample.

County Office will spot check the conservation plans for TIP through the end date of CRP-1R according to subparagraph 808 A.

If COC determines 1 or more of the participants are in violation of the terms and conditions of CRP-1R, COC will assess a $1,500 per CRP-1R to the applicable participant or participants, in addition to refunds plus interest for any TIP payments issued before the violation was discovered. In the case of a violation, any unpaid TIP payments will not be issued. COC shall determine the participant or participants in violation and assess damages as applicable.
C Waiving TIP Liquidated Damages

Determinations to waive liquidated damages shall be made on a case-by-case basis. CRP-1R termination does not automatically warrant waiving liquidated damages. When considering granting waivers, COC and STC shall consider:

- the circumstances in which the contract was terminated
- the agreement by the participants at time of enrollment to transition the acreage for the full term of CRP-1R
- whether the acreage will be restored to production using sustainable methods
- the effect the termination has on the participants.

COC may waive up to 50 percent of the assessed liquidated damages or recommend waiver of 100 percent to STC.

STC may approve requests to waive all liquidated damages.

Liquidated damages shall not be waived when COC or STC determines there was not a good faith effort to comply with the terms and conditions of CRP-1R.

D Submitting Waiver Requests

COC shall submit fully documented requests to STC. Include the following when preparing requests:

- producer’s written request
- COC findings
- specific COC recommendations and basis for recommendation, including determination on whether liquidated damages shall be assessed
- copies of all program documents and other County Office records.

E Request for Waivers

For waiver of refunds for TIP, see paragraph 576.

813-830 (Reserved)
831 General SAFE Information

A Background

On March 22, 2007, FSA announced the SAFE initiative, which allows:

- State Offices to address local wildlife conservation needs
- producers to install practices that benefit high priority State wildlife conservation objectives through the use of targeted restoration of vital habitats.

This cooperative conservation effort is based on locally developed conservation proposals that address the highest priority wildlife objectives in the State. The proposals will be considered by FSA STC after a review by the State Technical Committee. CEPD will review all STC recommendations.

B General Information

SAFE provides an opportunity to develop grassroots cooperative conservation projects to address high priority wildlife needs through habitat restoration. The practices must be used to address wildlife habitat that can be enhanced through the restoration of eligible cropland through CRP. Enrollment is available under continuous signup criteria.

SAFE practices can be used to restore the following habitats:

- rare, threatened, and endangered species
- species that have suffered a significant population decline
- species that provide significant social or economic value to the community.

Note: This includes restoration of habitat for game species, such as pheasant or quail, salmon or steelhead streams, or other socially or economically significant species.

SAFE project proposals must afford measureable and tangible benefits to the desired species.

Failure to adhere to SAFE provisions and guidelines may result in reduction of SAFE acres.--*
*--832 Policy

A Cropland Eligibility

Eligible cropland is:

- acreage determined to be eligible according to the land criteria provided in paragraph 151
- located within the State-designated SAFE project area.

Note: Marginal pastureland is not eligible.

B Signup Type

SAFE is authorized under continuous signup enrollment.

C Contract Duration and Effective Date

The CRP-1 period for CRP contracts is 10 to 15 years.

The effective date of CRP-1 is the first day of the month following the month COC approves the contract.

D Incentives

PIP’s and SIP’s are authorized.

Note: Land that is currently under contract or has expired and the cover has be maintained, is not eligible.

E Management Activity

Approved SAFE proposals shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. This activity may be based on the management activity approved for the CRP practice used as a basis for the SAFE practices. If new or modified management activities are necessary, these activities must be established according to paragraph 428.

F Cost Share

CCC will pay up to 50 percent of the eligible cost of establishing a permanent cover. State Offices must develop a C/S table similar to Exhibit 11, after practices are selected.

Note: See Exhibit 11, page 6 for an example.--*
G Review and Approval Cycle

Proposals for SAFE projects may be submitted at any time.

Subject to the availability of acres, proposals will be reviewed and approved on a fiscal year cycle according to the following table.

<table>
<thead>
<tr>
<th>Date</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>June 30</td>
<td>Final date for States to submit SAFE proposals.</td>
</tr>
<tr>
<td>September 30</td>
<td>Final date to review and approve SAFE proposals.</td>
</tr>
<tr>
<td>October 1</td>
<td>CEPD will begin notifying States of SAFE proposal determinations and allocating acres to approved projects.</td>
</tr>
<tr>
<td></td>
<td>Prior year register will be deleted.</td>
</tr>
</tbody>
</table>

CEPD will maintain a register of SAFE proposals received for tracking purposes. Proposals for SAFE projects received after June 30 will be placed on the following year’s register and reviewed in the next fiscal year cycle. Submitted proposals on the register will not carry over to following years. The register for the previous year will be deleted each October 1.

Proposals not approved may be resubmitted for consideration in the following year’s approval cycle. Because available acres will have been allocated to approved SAFE proposals, requests for reconsideration of SAFE proposals not approved will not be accepted.

For existing SAFE projects, CEPD will periodically notify States to submit requests for additional acres, as authorized by the Secretary. States shall submit requests for additional acres by the deadline established in the applicable notice. Acreage allocation determinations will be made within 90 calendar days of the acceptance deadline. States will be notified of acreage allocations between 90 and 120 calendar days after the acceptance deadline.

**Example:** On May 1, the Secretary announces additional SAFE acres. On May 15, CEPD issues a notice authorizing States to submit requests for additional SAFE acres by June 30. Between July 1 and September 30 additional acreage allocation determinations are made. On October 15, CEPD will notify States of additional acreage allocations.—*
H Acreage Allocation

Total enrollment shall not exceed the total acres announced by the Secretary. CEPD will maintain a master allocation tracking system to ensure that total SAFE acres are not exceeded. Acreage is allocated to States based on a number of factors including:

- new versus existing projects
- project performance
- project targeted species
- project enhancement of threatened and endangered plant and animal species survival.

State projects will be limited to the State’s allocation.

833 SAFE Proposals

A Proposal Development

A SAFE proposal may be developed and put forth by a Federal, State, or local agency or by a private organization. Ideally, all partners will develop proposals under a cooperative and collaborative environment. The proposal shall be developed consistent with the process set forth in this paragraph and shall comply with the format provided in Exhibit 63.

Proposals shall include documentation of support from TSP, cooperating partners, or stakeholders.

States shall not submit proposals for SAFE projects that overlap existing CREP agreements.

Example: State A has a CREP agreement that targets Lesser Prairie Chickens in counties A, B, and C. State shall not develop a SAFE proposal for Lesser Prairie Chickens that includes counties A, B, and C.--*
A Proposal Development (Continued)

Proposals shall be based on the existing CRP framework and CRP practices. All proposals must be limited to the following SAFE practices and the applicable CRP practices.

<table>
<thead>
<tr>
<th>SAFE Practice</th>
<th>Practice Type</th>
<th>Applicable CRP Practices</th>
</tr>
</thead>
<tbody>
<tr>
<td>CP38A</td>
<td>Buffers</td>
<td>CP8A, CP21, CP22</td>
</tr>
<tr>
<td>CP38B</td>
<td>Wetlands</td>
<td>CP9, CP23, CP23A, CP27, CP28, CP37</td>
</tr>
<tr>
<td>CP38C</td>
<td>Trees</td>
<td>CP3, CP3A, CP16, CP17, CP25, CP32, CP31, CP35</td>
</tr>
<tr>
<td>CP38D</td>
<td>Longleaf Pine</td>
<td>CP3A, CP36</td>
</tr>
<tr>
<td>CP38E</td>
<td>Grass</td>
<td>CP1, CP2, CP4D, CP8, CP12, CP15’s, CP18’s, CP24 CP25, CP33</td>
</tr>
</tbody>
</table>

A SAFE proposal may select 1 or more CRP practices for use as SAFE practices. CRP practices may be used without modification, or 1 or more practices may be modified. See subparagraph B.

**Example:** SAFE practices intended to restore habitat for the benefit of Sharp-Tailed Grouse in Idaho may incorporate CP2 (Native Grass Restoration) and CP4D (Permanent Wildlife Habitat, Noneasement) as best suited for the project and these practices may be used under CP38E (Grass) without changes.

B Practice Modifications

CRP practices provided in this handbook may be modified by imposing additional requirements within 2-CRP practice standard guidelines. Rationale for CRP practice modifications shall be:

- part of the SAFE proposal
- supported by scientifically-defensible information or expert judgment.

These changes apply only within the approved SAFE practice geographic area.

**Note:** Practice requirements may not be relaxed.

**Example:** The Sharp-Tailed Grouse Restoration SAFE practice, CP38E, could require all plantings (based on CP4D) to have 5 native species of grasses plus a requirement that Silver Sage Brush be a part of the planting.

The Sharp-Tailed Grouse Restoration SAFE practice, CP38E, could alter CP2 (Native Grass Restoration) by the seeding rates or frequency of disturbance.--*
C State Proposal Review

All SAFE proposals shall be submitted to the FSA State Office. After a review for completeness, the FSA State Office will request the State Technical Committee to review and report recommendations to FSA STC. FSA STC shall review all proposals and, then forward their recommendations to CEPD.

D CEPD Approval

CEPD will review all new SAFE proposals for completeness and conformity to the format provided in Exhibit 63. SAFE proposals that are incomplete will be rejected and returned to the State Office for resubmission.

Complete SAFE proposals will be sorted into 2 groups as follows:

- proposals providing benefits to rare, threatened, endangered, and species of special concern
- proposals providing significant social or economic value to the community, such as game birds.

Proposals within each group will be prioritized and ranked by CEPD based on factors including:

- targeted species
- quality of habitat enhancement for targeted species
- size and scope of project area
- available acres
- cost
- effectiveness of monitoring and evaluation plan.
A Modifications to Existing SAFE Projects

Proposed modifications to existing SAFE projects must be coordinated with all State SAFE partners and:

- submitted to CEPD and include:
  - a cover memo summarizing the project changes and requesting approval
  - amended pages to the approved SAFE project proposal following the format provided in Exhibit 63
  - include sufficient analysis and documentation justifying the changes and any new GIS data and appropriate maps, new practice provisions, payment provisions, etc.

Note: For amendments to existing SAFE projects where the project area will change, follow shapefile requirements in Exhibit 63.

B Requesting Additional Acres

State Offices that can demonstrate that their proposal targets high priority State wildlife conservation objectives may request an additional acreage allocation for the project. State requests for additional acres shall include sufficient documentation justifying the additional acres including:

- cover memo providing targeted species
- acres requested
- any reports of outstanding requests
- support from cooperating agencies or partners (Cooperating Federal agencies such as US Fish and Wildlife Service, State Department of Agriculture, State wildlife agencies, and other wildlife NGO’s).

States may request additional acres at any time.
B Requesting Additional Acres (Continued)

Requests for additional acres will be prioritized and ranked by CEPD based on factors including:

- targeted species (rare, threatened, endangered, species of special concern, species that provide significant social or economic value)
- quality of habitat enhancement for targeted species
- size and scope of project area
- project performance
- available acres.

Notes: Because past requests for additional acres significantly outweighed available acres when announced by the Secretary, requests may be factored based on the above criteria versus total acres available.

Underperforming projects may have their allocation reduced.

C Requests to Transfer Acres Between Existing Projects

State Offices that can demonstrate that their project targets high priority State wildlife conservation objectives may request to transfer available acres between existing projects. States requesting to transfer acres between projects shall submit requests to CEPD for review and approval.

Requests to transfer acres shall include:

- project providing acres and project to receive acres
- targeted species receiving acres
- size and scope of project area
- project performance report from the previous year
- available acres
- documentation of support from TSP, cooperating partners, and stakeholders.--*
D CEPD Review

CEPD shall:

- review existing projects for conformity with these provisions and project performance
- approve requests and notify State by memorandum.

Projects which do not meet the objectives of the original proposal or are underperforming may have their acres reduced.

835 Performance Reporting

A Performance Reporting

Each existing SAFE project shall provide an annual performance report. The annual report shall be sent before December 31st of each year and shall include the following:

- overview of project accomplishments
- description of each modified practice and list of all practices
- enrollment by practice
- State/private resource commitment
- monitoring/evaluation methods and results
- outreach efforts.

Note: The report shall be sent to CEPD electronically as a Microsoft Word document with data in Excel. Failure to provide the annual report by the deadline can result in an acreage adjustment.

B Performance Monitoring and Evaluation

To determine whether the practices selected create the desired habitat, the FSA State Office shall collaborate with qualified professionals in the wildlife community to design and implement an appropriate habitat and wildlife population monitoring and evaluation plan. Wildlife population response to the habitat must be conducted in a scientifically defensible manner, use generally accepted techniques, and make the resulting data, papers, and reports available to FSA and the scientific community.

Note: Exhibit 63 provides the elements for a monitoring worksheet.--*

</tr>
</tbody>
</table>
Definitions of Terms Used in This Handbook

Affected Acres

Affected acres are the designated CRP acres, as determined by COC, to be in violation of a term or condition of CRP-1.

Agricultural Commodity

An agricultural commodity is any crop planted and produced:

- by annual tilling of the soil
- on an annual basis by one-trip planters.

The following are agricultural commodities:

- sugarcane planted or produced in a State
- alfalfa and other multiyear legumes and grasses:
  - grown in rotation with another agricultural commodity
  - not to exceed 12 years.

Annual Rental Payment

Annual rental payment is, unless the context indicates otherwise, the annual payment specified in the CRP contract that, when authorized, is made to a participant to compensate a participant for placing eligible land in CRP, including any incentive payments that are not specifically cost-shares.

Approved Conservation Plan

An approved conservation plan is a plan that contains:

- approved cover
- other required practices necessary for establishing and maintaining cover
- a schedule for installing conservation practices to provide adequate environmental benefits on eligible cropland.
Definitions of Terms Used in This Handbook (Continued)

**Arbitrary Holddown**

Arbitrary holddown is a predetermined amount that the C/S payment must not exceed.

**Beginning Farmer or Rancher**

A beginning farmer or rancher is, as determined by CCC, a person or entity who:

- has not been a farm or ranch operator or owner for more than 10 consecutive years--*

- materially and substantially participates in the operation of the farm or ranch involved in the CRP contract modification

- if an entity, is an entity in which 50 percent of the members or stockholders of the entity meets the first 2 requirement of this definition.

**Commercial Pond-Raised Aquaculture Facility**

A commercial pond-raised aquaculture facility is, as determined by CCC, any earthen facility from which $1,000 or more of freshwater food fish were sold or normally would have been sold during a calendar year.

**Conservation District**

Conservation District is a subdivision of a State that is organized according to the applicable State conservation district law.

**Conserving Use**

Conserving use means a use of cropland with such rotation requirement, if any, as may be specified by DAFP, for any alfalfa and other multi-year grasses and legumes planted during 2002 through 2007, any summer fallow during 2002 through 2007, and in the case of land previously enrolled in the program where the grass cover required by CRP-1 continues to be maintained as though still enrolled. Where the land use for a year qualifies as a “conserving use”, the land for that year shall, for the purposes of eligibility under 7 CFR § 1410.6 (a)(1), be considered to have been planted to an “agricultural commodity.”
Definitions of Terms Used in This Handbook (Continued)

C/S Payment

A **C/S payment** is a payment provided by USDA to help CRP participants establish approved conservation practices that are required on CRP-1.

Cropped Wetlands

**Cropped wetlands** are farmed wetlands and wetlands farmed under natural conditions.

CRP Contract or CRP-1

**CRP contract or CRP-1** is the approved agreement, including the approved conservation plan, that:

- is entered into, in writing, between COC and the participant
- sets forth the terms and conditions for participation in CRP.

Dead or Dry Litter Crop

A **dead or dry litter crop**:

- provides high tonnage of residue and mulch for erosion control
- conserves moisture until the permanent vegetative cover is established
- is an annual crop established before seeding of a permanent vegetative cover
- is used in arid areas where a lack of moisture prevents establishment of permanent vegetative cover in the normal manner.

Easement Practice

An easement practice is a practice that requires an easement be filed for a specific period of time that identifies FSA real property interest.
Definitions of Terms Used in This Handbook (Continued)

**Erodibility Index (EI)**

EI is the revised universal soil loss equation factor used to determine the inherent erodibility of a soil without management by dividing the potential average annual rate of erosion (rainfall factor times soil erodibility times (length of slope and percentage slope factor)) for each soil by the predetermined soil loss tolerance (T) value for the soil.

**Family Member**

A family member defined according to 7 CFR Part 718 and part 1410 as “an individual to whom a person is related as spouse, lineal ancestor, lineal descendant, or sibling, including a:

1. Great grandparent;
2. Grandparent;
3. Parent;
4. Child, including a legally adopted child;
5. Grandchild;
6. Great Grandchild;
7. Sibling of the family member in the farming operation; and
8. Spouse of a person listed in items 1 through 7.”

**Field Windbreak**

A field windbreak is a vegetative barrier with a linear configuration composed of:

- trees
- shrubs
- approved perennial vegetation.

**Gleaning**

Gleaning is placing livestock on fields after harvesting to use the excess crop residue and grains that remain in the field.
Definitions of Terms Used in This Handbook (Continued)

Infeasible to Farm

Infeasible to farm means an area that is too small or isolated to be economically farmed.

Land Permanently Inundated With Water

Land permanently inundated with water is land that is reasonably expected to be under water through the CRP-1 period.

Loss of Merchantable Timber (for EFCRP purposes)

Loss of merchantable timber is defined as the difference between the pre-hurricane economic value of eligible land on the acreage offered for enrollment in EFCRP and the post-hurricane economic value of the entire acreage offered using the spring 2006 Timber Mart-South prices.

Merchantable Timber

Merchantable timber is timber on private nonindustrial forest land on which the average tree has a trunk diameter of at least 6 inches measured at least 4 ½ feet above the ground.

Non-C/S Payment

A non-C/S payment is any CRP payment that is not a C/S payment.

Participant

A participant is an owner or operator who has entered into CRP-1.

Perennial Stream

Perennial stream is a stream that contains water throughout the year. An on-site field visit may be required to make the determination.
Definitions of Terms Used in This Handbook (Continued)

Private Nonindustrial Forestland (PNIF)

PNIF is land with existing tree cover that is owned by an individual, group, association, corporation, Indian Tribe, other legal private entity, or person who receives concurrence from the landowner for practice implementation or State school trust land.

Recharge Area

A recharge area is the area that contributes ground water and salts to the high water table in the discharge area or saline seep. The saline seep cannot be controlled without lowering the ground water in the recharge area. Recharge areas for seeps less than 5 acres shall not exceed a ratio of 10 acres of recharge area per 1 acre of saline seep.

Retention

Retention is the likelihood that the practice established will persist and be maintained beyond the lifespan of CRP-1 and will provide benefits beyond the contract period.

Retired or Retiring Owner or Operator

A retired or retiring owner or operator is an owner or operator of land enrolled in a CRP contract who has ended active labor in farming operations as a producer of agricultural crops or expects to do so within 5 years of the CRP contract modification.

Riparian Buffer

Riparian buffer is a strip of vegetation the purpose of which is to remove nutrients, sediment, organic matter, pesticides, and other pollutants from surface runoff and subsurface flow by deposition, absorption, plant uptake, and other processes, thereby reducing pollution and protecting surface water and subsurface water quality, which are also intended to provide shade to reduce water temperature for improved habitat for aquatic organisms and supply large woody debris for aquatic organisms and habitat for wildlife.
Definitions of Terms Used in This Handbook (Continued)

Saline Seep

A saline seep is an induced temporal (discharge) site with hydro-geologically connected recharge areas that contribute to high concentrations of soluble salts on or near the soil surface, impairing productivity. Discharge areas must have a soil electrical conductivity greater than 4 mmhos/cm at 25 degrees Celsius. Other characteristics include:

- ground water usually 4,000 micromhos or greater
- sodium absorption ratio ranges from 0 to 12
- soil pH less than 9
- high water table with electrical conductivity greater than mmhos/cm within 8 feet of the surface some or all of the time (often within 3 feet of the surface).

Seasonal Stream

A seasonal stream is a stream that contains water for only part of the year but more than just during and/or after rainfall or snowmelt. USGS maps shall not be used to determine seasonal streams. An on-site field visit may be required to make the determination.

SDA Farmer or Rancher

A SDA farmer or rancher means a farmer or rancher who is a member of a SDA group whose members have been subjected to racial or ethnic prejudice because of their identity as members or a group without regard to their individual qualities. Gender is not included as a covered group. SDA groups include the following and no others unless approved in writing by the Deputy Administrator:

- American Indians or Alaskan Natives
- Asians or Asian-Americans
- Blacks or African Americans
- Hispanics
- Native Hawaiians or other Pacific Islanders.
Definitions of Terms Used in This Handbook (Continued)

Standard Practice

A standard practice is a practice that did not require that an easement be filed when the CRP offer was originally submitted.

State School Trust Land

State school trust land is land that is owned by a State with the explicit purpose of supporting public schools.

Sustainable Farming

Sustainable farming is a farming system using sustainable grazing and crop production methods.

Sustainable Grazing and Crop Production Methods

Sustainable grazing and crop production methods are an integrated system of plant and animal production practices that have a site specific application that would:

- meet man’s food and fiber
- enhance the environment and the natural resource base
- use nonrenewable resources efficiently
- sustain the economic viability of the operation.

Technical Assistance

Technical assistance is assistance in regard to determining the eligibility of land and practices, implementing and certifying practices, ensuring contract performance, and providing annual rental rate surveys. The technical assistance provided in connection with CRP to owners or operators, as approved by CCC, includes technical expertise, information, and tools necessary for the conservation of natural resources on land; technical services provided directly to farmers, ranchers, and other eligible entities, such as conservation planning, technical consultation, and assistance with design and implementation of conservation practices; and technical infrastructure, including activities, processes, tools, and agency functions needed to support delivery of technical services, such as technical standards, resource inventories, training, data, technology, monitoring, and effects analyses.
Technical Service Provider (TSP)

TSP is an individual certified to provide technical assistance on behalf of USDA. Technical assistance includes conservation planning and design, layout, installation, and checkout of approved conservation practices.

Tenancy

Tenancy is the maintaining of acreage according to the Conservation Plan of Operation or, as otherwise required on the farm, as determined by COC.

Tree Planting Plan

The tree planting plan sets forth the silvicultural treatment necessary for planting trees. This plan includes:

- location
- number of acres
- site preparation
- tree species
- specifications
- planting dates
- pre-care and post-care of nursery stock
- maintenance to ensure survival.

Vegetative Cover

Vegetative cover is planted vegetation that has an expected lifespan to sufficiently protect the land for the life of CRP-1. Vegetative cover includes:

- trees
- perennial grasses
- legumes
- forbs or shrubs.

Water Cover

Water cover is the flooding of land by water to develop or restore shallow water areas for wildlife enhancement.
Definitions of Terms Used in This Handbook (Continued)

Wellhead Protection Area

An approved public wellhead protection area is the area designated by the appropriate State agency with an EPA-approved Wellhead Protection Program for water being drawn for public use, as defined for public use by the Safe Drinking Water Act, as amended.

Wildlife Corridor

A wildlife corridor is a strip of land, 1 to 3 chains in width, which includes woody vegetation as determined by STC, in consultation with the State Technical Committee, that

- connects existing wildlife cover
- provides travel lanes for wildlife through a nonprotective cover area.

The following are examples of eligible and ineligible wildlife corridors.
A Example of CRP-23

The following is an example of CRP-23.

**Note:** The producer is not required to notify the County Office in writing; however, the County Office shall notate the producer’s response in the CRP folder. See paragraph 341.

```
Dear: _______________________________________

This notice is to inform you that your offer on tract ______ under the Conservation Reserve Program (CRP) has been determined acceptable by the National Office.

The Natural Resources Conservation Service (NRCS) or Technical Service Provider (TSP) must develop a plan, approved by the Conservation District, and signed by all signatories on the CRP contract offer to participate in the CRP. So that we may continue to process your offer, you should continue to work with NRCS or TSP to obtain the required plan on the acreage which is subject to the offer. Your offer cannot be approved by the County Committee without an approved conservation plan.

Practices to be carried out under CRP may be started with the understanding that cost-share payments will not be made if the practice is not included in the approved conservation plan.

You have 30 days from the date of this letter to notify this office of whether you want your offer approved to participate in the CRP so that NRCS or TSP may begin plan development. If we do not hear from you within the 30-day period, we will reject your offer and assess liquidated damages. Liquidated damages will also be assessed if you decide not to participate. Damages will equal 25 percent of your offer rate times the number of acres offered for CRP.

The same acreage cannot be enrolled under CRP and Direct and Counter-Cyclical Program (DCP). The total of the CRP and DCP acres on a farm cannot exceed the total eligible land for the program on the farm. The owner of the land offered for CRP may be required to reduce all or a portion of DCP acreage before CRP-1 will be approved. Please contact the ______________ County FSA Office for more information.

Sincerely,

____________________________________
County Executive Director

Letters Notifying Producers of Offer and Eligibility Status (Continued)

B Using CRP-23

Because continuous signup offers and standard signup offers are not processed in the same manner and certain provisions do not apply to both offer types, County Offices must ensure that the correct information is provided in CRP-23.

CRP-23 must be:

- reproduced locally, including form number and date
- prepared in duplicate
- mailed to producers before CRP-1 is approved.

County Offices shall:

- for standard signup offers:
  - use CRP-23 to notify producers that:
    - their CRP offer has been determined acceptable by the National Office
    - they have 30 days from the date of the letter to notify the County Office whether they want the offer approved provided all eligibility requirements are met
    - liquidated damages will be assessed if they decide not to participate
    - they must work with the technical agency to develop a conservation plan
    - the same acreage cannot be enrolled under CRP and DCP

  *--Note: See subparagraph 401.B.--*

- mail original CRP-23 to producer and file copy with the offer
- adapt CRP-23 to fit the situation
Letters Notifying Producers of Offer and Eligibility Status (Continued)

B Using CRP-23 (Continued)

- for continuous signup offers:
  - use CRP-23 to notify producers that:
    - their CRP offer has been determined acceptable by COC
    - they must work with the technical agency to develop a conservation plan
    - the same acreage cannot be enrolled under CRP and DCP
  
  *--Note: See subparagraph 401 B.--*

  - the offer will be void if CRP-1 is not approved within 6 months of the date the producer signs CRP-2C
  - all crops must be removed from the acreage before CRP-1 effective date
  - if applicable, producer will be notified when CRP-1 is completed and ready for producer’s signature; see paragraph 214
  - starting the practice before CRP-1 approval is at the producer’s own risk
  - a paid-for measurement service is required, if applicable
  - mail original CRP-23 to producer and file copy with the offer
  - adapt CRP-23 to fit the situation
  - not include language regarding assessment of liquidated damages.
Letters Notifying Producers of Offer and Eligibility Status (Continued)

NOTICE OF CONTRACT APPROVAL

Date (MM-DD-YYYY) ________________

Dear: __________________________________________________________________

Your offer to place land in the Conservation Reserve Program (CRP) has been approved by the _______________ County Committee.

Enclosed are your signed copies of the CRP contract and attachments. The effective date of the CRP contract is _______________.

Form AD-245 is provided for those conservation practices that are to be established in accordance with the approved conservation plan as part of your contract. When the practices are completed, you must provide this office a report of performance by signing the AD-245 and include all receipts affiliated with practice establishment so cost-share payment can be made.

Sincerely,

______________________________

NOTICE OF CRP WAIVER OF OWNERSHIP

Dear __________________:

It has been determined that a brief involuntary loss of ownership, because of foreclosure action initiated by a lending institution or voluntary loss instead of foreclosure, does not necessarily make a producer ineligible to participate in the Conservation Reserve Program (CRP). If a producer is purchasing a farm that the producer originally owned, the producer may participate in CRP if all other eligibility requirements are met.

Documentation submitted shows that you were the original owner and that you now have the opportunity to repurchase the farm.

Based on this information, it has been determined that the land is not being purchased for the purpose of placing it into CRP. You must complete purchase of the farm before you will be eligible to submit an offer or enrollment. If an acceptable offer is submitted and you agree, in writing, that the contract shall not be assumed by a successor in interest, you are eligible to participate in CRP.

Sincerely,

County Executive Director

This program or activity will be conducted on a nondiscriminatory basis without regard to race, color, religion, national origin, age, sex, marital status, sexual orientation, or disability.
Letters Notifying Producers of Offer and Eligibility Status (Continued)

F Using CRP-25

County Offices shall:

- use CRP-25 to notify producers who had a brief involuntary loss of ownership, because of foreclosure, that they may participate because all other eligibility requirements are met
- adapt CRP-25 to fit the situation
- reproduce CRP-25 locally
  Note: Include the form number and date on the reproduction.
- prepare CRP-25 in duplicate.
  - Mail original to producer.
  - File a copy with the offer.
G  Example of CRP-26

This is an example of CRP-26. County Offices shall adapt CRP-26 to fit the situation according to 1-APP.

Note: This is only an example.

NOTICE OF UNACCEPTABLE OFFER

Date: (MM-DD-YYYY) _____________

Dear: __________________________________________

Thank you for your offer to place land in the Conservation Reserve Program (CRP). Your offer to participate in the ________ (year) CRP was not accepted because:

☐ Environmental Benefits Too Low
☐ Land Determined Ineligible
☐ Payment Rate Offered Exceeded the Maximum Payment Rate
☐ County Cropland Limitation Has Been Reached
☐ Existing Restrictive Easement
☐ 1-Year Ownership/Operatorship Eligibility Not Met
☐ Ineligible Cropping History
☐ Landowner/Tenant Provision Not Met
☐ Other

If you feel that all the facts have not been considered in your case, you may: __________________________

You need to provide factual information and reasons why you believe this determination is not correct.

Although your offer was not accepted, you may be eligible for the continuous sign-up of high priority conservation practices such as filterstrips, riparian buffers, grass waterways, shelter-belts, field wind breaks, living snow fences, contour grass strips, salt tolerant vegetation, or shallow water areas for wildlife. We have enclosed a copy of a FSA continuous signup fact sheet. Please contact our office if you are interested.

It may be possible that your offer for general sign-up may be modified to increase the environmental benefits and the likelihood of acceptance in a future signup.

Sincerely,

______________________________
County Executive Director

CRP-26 (07-23-10)

An Equal Opportunity Provider and Employer
Letters Notifying Producers of Offer and Eligibility Status (Continued)

H Using CRP-26

County Offices shall:

- use CRP-26 to notify producers that their CRP offer was unacceptable
  
  **Note:** When using CRP-26 to notify producers that their continuous signup offer was not acceptable, County Offices shall modify CRP-26 by removing the language regarding:
  
  - continuous signup
  - increasing the environment benefits.

- check appropriate box on CRP-26

- modify CRP-26 to provide appropriate appeal rights under 1-APP
  
  **Note:** Modifications include:
  
  - number of days to appeal or request mediation
  - appeal rights to COC only; to COC, STC, or NAD; or the right to request mediation.

- reproduce CRP-26 locally
  
  **Note:** Include the form number and the date on the reproduction.

- prepare CRP-26 in duplicate, and distribute as follows:
  
  - mail the original to the producer
  - file a copy with the offer

- include CRP continuous signup fact sheet when notifying producers that their offer under a general signup was not acceptable.
H Using CRP-26 (Continued)

County Offices may adapt CRP-26 to fit the situation.

Examples: Following are examples of adapting CRP-26 to different situations.

- Including the producer’s EBI score and the national cutoff score.

  Note: Offers in counties that have met the 25-percent cropland limitation may have an effective cutoff score that is different than the national average EBI cutoff score.

- Explaining why the acreage or producer was determined ineligible.

- Including the maximum payment rate and the producer’s offered amount.
Example of CRP-35

This is an example of CRP-35.

Dear: __________________________ Date: __________________________

A change in the technical determination recently provided to the FSA Office by the Natural Resources Conservation Service or Technical Service Provider (TSP) regarding your Conservation Reserve Program (CRP) offer warrants reconsideration of your offer for a CRP contract.

Though many offers that are reconsidered will not result in a contract, the change that was provided for your offer may make it acceptable to FSA. After it is re-evaluated by the National FSA Office, you will be notified as soon as possible of the final acceptance or rejection determination of your offer.

We regret any inconvenience that this may have caused you.

Sincerely,

______________________________

Forms for Complying With Lobbying Disclosure Requirements

A Example of CCC-674

The following is an example of CCC-674.

To comply with lobbying disclosure requirements (31 U.S.C. 1352), applicants for and recipients of: 1) A Federal loan exceeding $150,000; or 2) A Federal contract, grant, or cooperative agreement payment exceeding $100,000 must file with the Disturbing Office:

A. If they have not or will not use monies received for lobbying purposes, CCC-674.
B. If they have or will use monies received for lobbying purposes, SF-LLL.

CERTIFICATION

The undersigned certifies, to the best of his or her knowledge and belief, that:

(1) No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

(2) If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Report to Report Lobbying," in accordance with its instructions.

(3) The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

DATE
B  Example of SF-LLL

The following is an example of SF-LLL.
C Instructions for Completing SF-LLL

The following are instructions for completing SF-LLL.

INSTRUCTIONS FOR COMPLETION OF SF-LLL, DISCLOSURE OF LOBBYING ACTIVITIES

This disclosure form shall be completed by the reporting entity, whether subcontractor or prime Federal recipient, at the initiation or receipt of a covered Federal action, or a material change to a previously filing, pursuant to Title 31 U.S.C. section 1352. The filing of a form is required for each payment or agreement to make payment to any lobbying entity for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with a covered Federal action. Complete all items that apply for both the initial filing and material change report. Refer to the implementing guidance published by the Office of Management and Budget for additional information.

1. Identify the type of covered Federal action for which lobbying activity is and/or has been secured to influence the outcome of a covered Federal action.

2. Identify the status of the covered Federal action.

3. Identify the appropriate classification of this report. If this is a follow-up report caused by a material change to the information previously reported, enter the year and quarter in which the change occurred. Enter the date of the last previously submitted report by the reporting entity for this covered Federal action.

4. Enter the full name, address, city, State and zip code of the reporting entity. Include Congressional District, if known. Check the appropriate classification of the reporting entity thatdesignates it as, or expects to be, a prime or subcontract recipient. Identify the tier of the subcontractor, e.g., the first subcontractor of the prime is the 1st tier. Subcontracts include but are not limited to subcontracts, subgrants, and contracts awarded under grants.

5. If the organization filing the report in item 4 checks "Subcontractor," then enter the full name, address, city, State and zip code of the prime Federal recipient. Include Congressional District, if known.

6. Enter the name of the Federal agency making the award or loan commitment. Include at least one organizational level above agency name, if known. For example, Department of Transportation, United States Coast Guard.

7. Enter the Federal program name or description for the covered Federal action (Item 1). If known, enter the full Catalog of Federal Domestic Assistance (CFDA) number for grants, cooperative agreements, loans, and loan commitments.

8. Enter the most appropriate Federal identifying number available for the Federal action identified in Item 1 (e.g., Request for Proposal (RFP) number, Invitation for Bid (IFB) number, grant announcement number, the contract, grant, or loan award number, the solicitation/ proposal/award number assigned by the Federal agency). Include prefix, e.g., "RFP-DE-90-001-100-001-150001." If the Federal action identified in Item 1 is an amendment to a previously reported Federal action, enter the Federal action number assigned in the prior report.

9. For a covered Federal action where there has been an award or loan commitment by the Federal agency, enter the Federal amount of the award/loan commitment for the prime entity identified in Item 4 or 5.

10. (a) Enter the full name, address, city, State and zip code of the lobbying registrant under the Lobbying Disclosure Act of 1995 engaged by the reporting entity identified in Item 4 to influence the covered Federal action.

(b) Enter the full names of the individual(s) performing services, and include full address if different from 10 (a). Enter Last Name, First Name, and Middle Initial (MI).

11. The certifying official shall sign and date the form, print his/her name, title, and telephone number.

According to the Paperwork Reduction Act, as amended, no persons are required to respond to a collection of information unless it displays a valid OMB Control Number. The valid OMB control number for this information collection is OMB No: 3306-0046. Public reporting burden for this collection of information is estimated to average 10 minutes per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Management and Budget, Paperwork Reduction Project (3306-0046), Washington, DC 20503.

MOU/Memorandums of Agreement (Continued)

B Memorandum of Agreement Between CCC, FSA, and FS

The following Memorandum of Agreement was established between CCC, FSA, and FS for administration of CRP.

<table>
<thead>
<tr>
<th>MEMORANDUM OF AGREEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>BETWEEN THE COMMODITY CREDIT CORPORATION, FARM SERVICE AGENCY, AND THE FOREST SERVICE</td>
</tr>
<tr>
<td>Executed February 2007</td>
</tr>
</tbody>
</table>

This MEMORANDUM OF AGREEMENT (Agreement) is made and entered into by the Commodity Credit Corporation (CCC), Farm Service Agency (FSA) and the Forest Service (FS) with respect to the administration of the CCC’s Conservation Reserve Program (CRP). The purpose of this agreement is to delineate the responsibility of CCC, FSA and FS with respect to CRP forestry practices technical assistance.

Accordingly:

A. FS, acting on behalf of State Foresters, will, subject to the availability of funds:

1. Ensure that a sufficient number of qualified employees (both FS and State Forestry Agency personnel) are available to provide timely silvicultural recommendations for all forestry practice acreage offered for CRP enrollment.

2. Accurately complete and properly document the portion of CRP forms which prescribe forestry practices including proper tree planting recommendations, thinning and mid-contract activities.

3. Ensure site visitations occur and practice plans are developed and provided to participating landowners with forestry practices. Such plans will include proper tree planting procedures, proper site/species selection, site preparation recommendations, erosion control recommendations, post planting care including thinning and mid-contract activities such as prescribed burning. For continuous (CCRP) and Conservation Reserve Enhancement Program (CREP) acreage, all conservation plans shall be completed (including signatures) within 90 calendar days of the time when the producer indicates a desire to complete contract approval but no later than 10 calendar days before the effective date of the contract. For general signup offers that are considered acceptable and where applicants have indicated a desire to complete contract approval, conservation plans shall be completed within 90 calendar days.

4. Provide complete site compliance checks after a practice is completed and furnish verification of proper practice installation to the local FSA office.

5. Ensure that seedlings acquired from State Nurseries come from appropriate seed sources.

6. Provide site inspections and technical assistance if a forestry practice failure occurs.

7. Bill FSA annually within 30 days after final reimbursement figures are calculated according to this Agreement for all technical assistance work done on completed tree practice acreage.
8. For the Longleaf Pine CCRP, bill FSA within 30 days of March 31, 2007, June 30, 2007, and January 31, 2008 with a final bill after all contracts have been confirmed, on or about March 30, 2008.

B. FSA will, subject to the availability of funds:

1. Provide photocopies of aerial photography and a copy of the CRP-2 in a timely manner for all forestry practice acreage offered.

2. Provide completed acreage figures for each State for each sign-up in a timely manner based on the March 2008 upload of contract data. This will include General, Continuous, and CREP acreage.

4. Provide national estimates for all forestry activities for future years.

C. CCC will, subject to the availability of funds:

1. Reimburse FS for all technical assistance resulting from forestry activities on newly enrolled and re-enrolled acreage at a rate of $22 per acre for all forestry practices. This includes but is not limited to CP3 Tree Planting, CP3A Hardwood Tree Planting, CP11 Vegetative Cover - Trees – Already Established, CP22 Riparian Buffers, CP23 Wetland Restoration (floodplain), CP23A Wetland Restoration (non-floodplain), CP28 Farmable Wetland Pilot (Upland), CP30 Wetland Buffer, CP31 Bottom Land Timber Establishment on Wetlands, CP32 Expired CRP Hardwood Tree Planting on Marginal Pastureland, and CP36 Longleaf Pine. The following procedure will determine the acres of trees planted in wetlands (CP23, CP23A, and CP28) and wetland buffers (CP30):
   a. 95 percent of acres enrolled under CP23, CP23A, CP28, and CP30 in Southeastern and Northeastern States will be considered planted to trees (Alabama, Arkansas, Connecticut, Delaware, Florida, Georgia, Kentucky, Louisiana, Massachusetts, Maryland, Maine, Mississippi, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Puerto Rico, Rhode Island, South Carolina, Tennessee, Vermont, Virginia, and West Virginia).
   b. 50 percent of acres enrolled under CP23, CP23A, CP28, and CP30 in Midwestern States will be considered planted to trees (Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Ohio and Wisconsin).

This rate is applicable to all CRP activities including general CRP sign-up, Continuous CRP sign-up, and CREP Agreements.

2. Base reimbursement on the data in the CRP accomplishment's report for forestry activities, using the March 2008 upload of contract data and other dates for the Longleaf Pine CCRP.
D. Miscellaneous

1. In the event that adequate funding is not made available, FS, FSA, and CCC agree that FS
will terminate the responsibilities assigned to FS under this agreement as agreed to under
the termination clause of this agreement, and CCC may use a third party to complete the work.

2. It is mutually agreed that this Agreement is effective when signed and shall continue in
full force and effect through September 30, 2007. The Agreement may be terminated at any
time with thirty days notice by one party. Should this Agreement be terminated, billing will
be submitted for services rendered prior to the date of termination for which payment has not
been received. This Agreement may be modified by amendment by duly executed officials
of CCC, FSA and FS, or their designees. FS and FSA will enter annually into a National
Level Reimbursement Agreement (Form AD-672) based on this interagency agreement and
any amendments hereto, subject to the availability of funds for CRP Tree Planting and
Thinning technical assistance.

The AUTHORITY under which this agreement is entered into is the Food Security Act of 1985,
as amended, and the CCC Charter Act, as amended.

IN WITNESS WHEREOF, the parties have executed this agreement as follows:

Teresa C. Lasseter
Administrator
Farm Service Agency and
Executive Vice President

Date 2/15/07
C Memorandum of Agreement Between NRCS, FSA, and CCC

The following Memorandum of Agreement was established between NRCS, FSA, and CCC for the implementation, cooperation, expectation, and responsibilities in carrying out CRP.

Memorandum of Agreement (MOA)

Between

Natural Resources Conservation Service (NRCS),

Farm Service Agency (FSA),

And

Commodity Credit Corporation (CCC)

For Implementation of the Conservation Reserve Program (CRP)

Through September 31, 2012

I. Purpose

The purpose of this MOA is to provide for the implementation, cooperation, expectations, and responsibilities between NRCS, FSA, and CCC in carrying out the CRP.

II. General Provisions

Technical assistance is needed for the implementation of the CRP and FSA, acting on behalf of CCC, has determined that NRCS has personnel with expertise who can provide the technical assistance needed for the implementation of the CRP.

III. Authority

This MOA is authorized by Title XII of the Food Security Act of 1985, as amended (1985 Act). Other authorities may also apply.

IV. Responsibilities

NRCS, FSA, and CCC agree, subject to the availability of funds, that:

A. NRCS will:

1. As directed by FSA, provide technical assistance both directly or through NRCS approved Technical Service Providers (TSP) and assure all technical work done will meet NRCS technical requirements, including the National Planning Procedures Handbook for conservation planning and the Field Office Technical Guide (FOTO) requirements for conservation practices and systems.
C Memorandum of Agreement Between NRCS, FSA, and CCC (Continued)

2. According to the NRCS Cost of Programs Model, carry out the following tasks for the implementation of CRP, including new general and continuous enrollments, re-enrollments and extensions for general signup, and re-enrollments for continuous signup:

   a. Determine certain program eligibility for the Continuous CRP (CCRP), Conservation Reserve Enhancement Program (CREP), and the Farmable Wetland Program (FWP);

   b. Conservation planning;

   c. Conservation practice design systems implementation and certification of ten percent of all practices;

   d. Provide policy and program support.

3. Provide sufficient information regarding the NRCS Cost of Programs Model for FSA to validate NRCS tasks and costs. This includes providing to FSA the estimated per hour (salary and benefits) labor costs and the actual time expenditure per task. NRCS shall provide separately the overhead cost associated with CRP.

4. Provide FSA with NRCS CRP technical assistance cost estimates as necessary due to program changes according to the NRCS Cost of Programs Model.

5. Comply with the 1985 Act, the regulations at 7 CFR part 1410, procedures in 2-CRP Handbook, paragraphs A13-A15 set forth in this agreement per 2006 Streamlining, and other signed joint agency letters, and other laws pertaining to CRP.

6. Submit to FSA monthly billings by the 10th of each month for direct charge from NRCS time and accounting system information for reimbursement of actual cost of technical assistance provided by NRCS that will be paid within ten days. The monthly billing will include the unit (number of plans and acres) of each NRCS cost of the program’s model tasks. NRCS also agrees to provide such other information requested by FSA to verify NRCS costs and that payment is conditioned upon receipt by FSA of this information.

7. In accordance with NRCS’s environmental evaluation in planning and cultural resources policies, NRCS, on behalf of FSA, lead agency, is responsible in assisting FSA in complying and adhering to FSA’s environmental and cultural resource policy in FSA’s Environmental Quality Programs Handbook 1-EQ regarding compliance with the National Environmental Policy Act (NEPA), National Historic...
C Memorandum of Agreement Between NRCS, FSA, and CCC (Continued)

... which is performed by NRCS, and a copy of the NRCS form CPA-052, Environmental Evaluation (EE) in planning worksheet(s) or State modified version of the CPA-052, to document the potential environmental impacts associated with the proposed CRP contract and associated conservation practices and for recommending further action by FSA, the lead agency, to complete their regulatory responsibilities.

9. In accordance with NRCS General Manual (GM), 190, Part 410.5, Environmental Evaluation in Planning and GM 420, 401.11, Cultural Resources administrative responsibilities; provide FSA with copies of associated documentation as feasible, and additional information supporting the recommendations and findings on the NRCS CPA-052, EE planning worksheet or State modified version. FSA will complete required consultation before signing the NRCS CPA-052 form or State modified form and carry out such consultation with the State Historic Preservation Officer (SHPO) and Tribal governments or their Tribal Historic Preservation Officers (THPOs). This will help ensure that FSA will make an informed decision regarding the effects of its proposed action and any alternatives considered.

10. Revise (by making pen and ink changes) and sign conservation plans when the land is sold and the CRP contract is succeeded to, provided the technical assistance was originally performed by NRCS and not a technical service provider.

11. Revise, as appropriate, the conservation plan when the performance is different than the conservation plan, but meets FOTG specifications and NRCS is willing to certify compliance. NRCS will make the revision (pen and ink), provided that the technical assistance was originally performed by NRCS and not a technical service provider.

12. Revise, as appropriate, according to NRCS FOTG and sign the conservation plan, as appropriate, when contracts are modified.

13. Conduct annual status reviews on at least ten percent (includes TSPs) of all CRP contracts as requested by FSA.

14. Conduct practice certifications on approximately ten percent (includes TSPs) of all practice applications (Form AD-862) for all CRP practices nationwide for which NRCS has technical responsibility for the assigned practices identified in the conservation plan. Provide FSA applicable verification of the technical assistance work on Forms CRP-2 and AD-
15. For general signup, reduce the hours of work tasks for “second year” tasks from the 2005 level of 7.07 hours to the 2006 streamlined level of 5.85 hours. This reduction reflects a change that practice layout/surveys and practice check outs on second-year contracts be performed on an as-needed basis only. This reduction in hours does not change the overall obligation to perform general signup work, but allows for a reduction of time for field visits.

16. For re-enrollments of expiring contracts, reduce the hours of work tasks for “first year” conservation planning and “second year” implementation from the 2005 streamlined level of 19.12 hours to the 2006 streamlined level of 9.11 hours. These reductions reflect overall time savings associated with performing workload tasks on established practices. Field visits will be conducted on an as-needed basis as determined at the local level. This reduction in hours does not change the overall obligation to perform re-enrollment work, but allows NRCS the opportunity to reduce field time by reviewing FSA compliance field notes.

17. For the Emergency Forestry Conservation Reserve Program (EFCRP), subject to available funding, the reimbursement per contract will be $210 per contract to perform associated workload tasks. These include resource assessment, development of the contract support documents, and contract support documentation review with the Conservation District and participant. NRCS agrees that where there is no State Forestry presence, that said Agency will complete the task assigned to implement the EFCRP, in accordance with the CRP authorizing statute and regulation. The following States are eligible for EFCRP: Alabama, Florida, Louisiana, Mississippi, and Texas.

18. For the constructed wetlands practice under the Farmable Wetlands Program (FWP) or state Conservation Reserve Enhancement Programs, and subject to available funding, the reimbursement per contract will be $35,000. This reimbursement is for engineering services related to the constructed wetlands practice.

19. At the State level, conduct quality control reviews and assist FSA in providing training to ensure high levels of customer service through the CRP.

B. FSA has overall program authority and responsibility and will:
   1. Administer all CRP contracts, including compliance determinations.
   2. Receive apportioned CRP funds directly from Office of Management and
C Memorandum of Agreement Between NRCS, FSA, and CCC (Continued)

Budget (OMB);

3. Subject to terms of an OMB apportionment, reimburse National NRCS office monthly for actual cost of technical assistance according to NRCS time and accounting system information, in accordance with paragraph A-6, A-17, and A-18 of the agreement. Reimbursement will be made within 10 days of receipt of the invoice.

4. Maintain responsibility as the lead agency for purposes of complying with the provisions of the NEPA, NHPA, ESA, and other applicable laws, Executive Orders, and regulations as provided for in FSA’s Environmental Quality Programs Handbook 1-EQ.

5. Complete all consultations with the State Historic Preservation Officer, Tribal Historic Preservation Officer, Tribal governments, as required of its status as the lead agency, and all findings of historic property National Register of Historic Places eligibility and effects to these properties, as required by the Advisory Council on Historic Preservation (ACHP) regulations at 36 CFR Part 800. FSA will make the final determination of finding of effects in regards to the potential impacts to the environment, determinations of eligibility and effect and decisions on appropriate treatments regarding cultural resources related to the proposed CRP contract and associated conservation practices according to regulations at 36 CFR part 800.2(a)(2).

6. Be responsible for completing all consultations with the U.S. Fish and Wildlife Service and National Marine Fisheries Service, as required by FSA, or other documentation as indicated and deemed appropriate in order to make and support the determination of finding of effects in regard to the potential impacts to the environment, and effect and decisions on appropriate treatments regarding at-risk species and other natural resource concerns related to the proposed CRP contract and associated conservation practices.

7. Inform NRCS of anticipated general, continuous, CREP, and FWP signups and the targeted enrollment acres at least 12 months in advance of each signup, or as practicable.

8. If it deems appropriate and subject to the availability of funds, pay NRCS $500,000 for the review of soils data for technical determinations, soil rental rate analysis, and technical capabilities of TSPs.

9. Provide to NRCS, within 30 days prior to fiscal year, the estimated Technical Assistance reimbursable spreadsheet.

C. NRCS, FSA, and CCC agree to:
C Memorandum of Agreement Between NRCS, FSA, and CCC (Continued)

1. Cooperate at all levels to ensure consistent implementation of CRP policies and procedures. When differences occur, the parties will provide information and recommendations to the next level (i.e. county offices will forward information and recommendations to the State offices, State offices will forward information and recommendations to National Office). The Chief, NRCS, and Administrator, FSA, have final authority for ensuring consistent implementation of CRP policies and procedures.

2. Attempt to resolve, expeditiously and informally, any disagreements concerning this MOA. If a resolution cannot be reached at the district/county level, issues shall be elevated first to the State and then, if necessary, to the National level.

3. Maintain current agreements on streamlining technical assistance (such as producer self-certification of non-engineering practices) and continue to pursue further streamlining efforts to gain greater efficiencies, reduce workload, and minimize costs of delivering CRP without loss of conservation benefits while ensuring the conservation technical assistance is a prudent expenditure of government resources.

4. Sixty days prior to budget Mid-Session review, review the actual CRP enrollment estimates to date and update the Cost of Programs model accordingly.

5. Have CCC, FSA, and NRCS enter into a national level reimbursable agreement (Form AD-672) for each fiscal year based on this MOA and any amendments hereto, for CRP technical assistance.

V. MISCELLANEOUS PROVISIONS

A. All funding commitments of all parties in this MOA are subject to the availability of funds. In the event that adequate funding is not made available, FSA and CCC agree that NRCS may terminate the responsibilities assigned to NRCS under this agreement as agreed to under the termination clause of this agreement.

B. It is mutually agreed that this Agreement is effective when signed by all parties and shall continue in full force and effect through September 30, 2012. The Agreement may be terminated at any time with thirty days notice by one party. Should this Agreement be terminated, billing will be submitted for services rendered prior to the date of termination for which payment has not been received. This Agreement may be modified by amendment duly executed by officials of FSA and NRCS. NRCS and FSA will enter annually into a National Level Reimbursement Agreement (Form AD-672) based on this interagency agreement and any amendments hereto, subject to the availability of funds for NRCS technical assistance.
C. Neither CCC, FSA nor NRCS, shall assign or transfer any rights or obligations under this Agreement without prior written approval of the other party.

D. CCC, FSA and NRCS agree that, to the extent possible under applicable law, each party will be solely responsible for its own acts, omissions, and the results thereof, and shall not be responsible for the results thereof caused by the acts or omissions of the other party.

E. The Deputy Administrator for Farm Programs, Farm Service Agency or the Deputy Administrator designee or successor, is delegated authority to carry out this Agreement for FSA and CCC, and, with the NRCS Chief, or designee, may further amend this Agreement consistent with the provisions of the 1985 Act, as amended, and the regulations at 7 CFR part 1410. The provisions of this Agreement may only be modified by written agreement between the parties.

F. All parties to this MOA will comply fully with the information gathering provisions of section 1619 of the Food, Conservation, and Energy Act of 2008, P.L. 110-246 (a.k.a. the 2008 Farm Bill), as well as section 2004 of the Farm Security and Rural Investment Act of 2002, P.L. 107-171 (a.k.a. the 2002 Farm Bill), the Privacy Act, the Freedom of Information Act, and related acts concerning privacy and the dissemination of records.

National CRP Practices

CP1 Establishment of Permanent Introduced Grasses and Legumes

A Purpose

*--This practice is to establish new or maintain existing vegetative cover of introduced grasses and legumes on eligible cropland that will enhance environmental benefits.

B Program Policy

Apply this practice to establish or maintain existing permanent introduced grasses and--* legumes on eligible cropland.

C Eligibility

To be eligible for C/S, this practice shall:

• improve environmental benefits to less than the soil loss tolerance
• prevent degradation of environmental benefits from recurring
• be maintained for the life of CRP-1
• be included in the approved conservation plan.

*--Note: C/S is authorized as a component of CP1 development of a permanent water source for wildlife.--*

**Note:** C/S does not apply for existing cover with no enhancements.
National CRP Practices (Continued)

CP1 Establishment of Permanent Introduced Grasses and Legumes (Continued)

E Requirements

The following are requirements for this practice.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.

  **Exceptions:** Managed haying and grazing or emergency haying/grazing if authorized and included in the conservation plan.

- Limit C/S to the minimum minerals and seed necessary to establish an adequate cover to improve environmental benefits.

- Chemicals used in performing the practice **must** be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

F Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

G Environmental Concerns

Consider wildlife and other environmental concerns when establishing the protective measure.
National CRP Practices (Continued)

CP1 Establishment of Permanent Introduced Grasses and Legumes (Continued)

H Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1.

C/S shall be refunded if either of the following applies:

- the producer destroys the practice during the life of CRP-1
- the cover fails to improve the environmental benefits during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

J Program Development

Follow this subparagraph to develop the county program.

- County programs shall provide the requirements that are conditions for C/S.
- STC may establish these requirements.

K Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP2 Establishment of Permanent Native Grasses

A Purpose

*--This practice is to establish new or maintain existing vegetative cover of native grasses on eligible cropland that will enhance environmental benefits.

B Program Policy

Apply this practice to establish or maintain existing permanent native grass species on eligible--* cropland.

C Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the life of CRP-1
- be included in the approved conservation plan.

*--Note: C/S is authorized as a component of CP2 development of a permanent water source for wildlife.--*
National CRP Practices (Continued)

CP2 Establishment of Permanent Native Grasses (Continued)

Note: C/S does not apply for existing cover with no enhancements.
National CRP Practices (Continued)

CP2 Establishment of Permanent Native Grasses (Continued)

E Requirements

The following are requirements for this practice.

• The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.

  Exceptions: Managed haying and grazing or emergency haying and grazing as authorized.

• Limit C/S to the minimum minerals and seed necessary to establish an adequate cover to improve environmental benefits.

• Chemicals used in performing the practice must be:

  • Federally, State, and locally registered

  • applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

• Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.

• The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

F Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

G Environmental Concerns

Consider wildlife and other environmental concerns when establishing the protective measure.
CP2 Establishment of Permanent Native Grasses (Continued)

H Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1. C/S shall be refunded if either of the following applies:

- producer destroys the cover during its lifespan
- cover fails to provide enhancement of environmental benefits during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

J Program Development

County practice shall include the practice lifespan. County programs shall also provide details of any requirements, such as seedbed preparation, seeding dates, eligible seed, etc., that are conditions for C/S for the practice. STC may establish these requirements.

K Technical Responsibility

NRCS or TSP shall have technical responsibility for this practice.
CP3  Tree Planting

A  Purpose

*--This practice is to establish new or maintain existing stand of trees in a timber planting that will enhance environmental benefits.

B  Program Policy

Apply this practice to eligible cropland suitable for growing new or maintaining existing trees--* that will provide multipurpose forest benefits.

C  Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the life of CRP-1
- be included in the approved tree planting plan.

C/S is authorized to plant approved native grass and/or shrub plantings best suited for wildlife in the area within the 10 to 20 percent openings. Open areas must be planted to a 50-point cover of approved native grasses and/or shrubs best suited for wildlife in the area.

C/S is not authorized for natural regeneration of native grass vegetation within the 10 to 20 percent open areas.

D  C/S Policy

The following shows C/S policies for this practice.

Important:  C/S is not authorized for natural regeneration of native grass vegetation within the 10 to 20 percent open areas.

E  Requirements

The following are requirements for this practice.

- Plantings **must** be protected from destructive fire and from grazing by domestic livestock for the life of CRP-1.

- Chemicals used in performing the practice **must** be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

F  Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.
CP3 Tree Planting (Continued)

G Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about types of plantings, spacing, and other practice specifications.

H Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1. C/S shall be refunded if either of the following applies:

- the producer destroys the cover during the life of CRP-1
- the cover fails to adequately improve environmental benefits during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

J Program Development

Follow this subparagraph to develop the county program.

- County practice shall identify the eligible species and provide any requirements, such as spacing, minimum plantings per acre, site preparation, or cultivation, that are conditions for C/S.
- Approved planting methods may be included or incorporated by reference to published technical standards.

K Technical Responsibility

Technical responsibility for this practice shall be assigned to FS. If an FS representative is not available, this responsibility may be redelegated to NRCS or TSP.
CP3A Hardwood Tree Planting

A Purpose

*--This practice is to establish and maintain a new stand or an existing stand of predominantly hardwood trees in a timber planting that will enhance environmental benefits.

Note: For CRP purposes, Longleaf Pine and Atlantic White Cedar shall be treated as hardwood trees, if planted at rates appropriate for the site index.

B Program Policy

Apply this practice to eligible cropland suitable for growing new or maintaining existing--* hardwood trees that will provide multipurpose forest benefits.

Predominant hardwood may include softwood trees:

- not to exceed 50 percent of the total number of trees planted
- only to provide wildlife habitat diversity to the area
- where used as nurse trees for no economic use.

Note: If more than 50 percent of the trees planted are softwoods, the participant shall be limited to a 10-year contract.

C Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the life of CRP-1
- be included in the approved tree planting plan.

** **

Note: Where silviculturally appropriate, as determined by the service forester, softwoods may be planted as trainers, not to exceed 50 percent of the number of trees planted to optimize hardwood quality if no commercial use is made of the softwoods.
National CRP Practices (Continued)

CP3A Hardwood Tree Planting (Continued)

E Requirements

The following are requirements for this practice.

- Approval must be obtained from the State Forester certifying that planting up to 50 percent softwoods is an appropriate silvicultural practice for the State.

- Planting in excess of 50 percent soft woods must receive prior approval from the FS and FSA National Office.

- Planting of softwoods may be for only nurse trees or as wildlife habitat in a pattern appropriate for that purpose.

- Plantings must be protected from destructive fire and from grazing by domestic livestock for the life of CRP-1.

- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
  - The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

F Planting Timespan

Planting of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

CRP participants may be allowed to plant hardwood trees over 3 years if:

- 10.0 acres or more are scheduled to be established
- at least one-third of the trees are planted in each year
- hardwood tree planting is included in the tree planting plan.

G Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about types of plantings, spacing, and other practice specifications.
H Practice Maintenance

This practice shall be maintained without additional C/S for the life of CRP-1 as designated by participant.

C/S shall be refunded if either of the following applies:

- the producer destroys the cover during the life of CRP-1
- the cover fails to adequately improve environmental benefits during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

J Program Development

Follow this subparagraph to develop the county program.

- County practice shall:
  
  - identify the eligible species
  
  - provide requirements, such as spacing, minimum plantings per acre, including softwoods for cover (to be a minimum amount necessary), site preparation, or cultivation, that are conditions for C/S.

  - Approved planting methods may be included or incorporated by reference to published technical standards.

K Technical Responsibility

Technical responsibility for this practice shall be assigned to FS. If an FS representative is not available, this responsibility may be redelegated to NRCS or TSP.
CP4B Permanent Wildlife Habitat (Corridors), Noneasement

A Purpose

This practice is to do both of the following:

- establish a permanent wildlife corridor between 2 existing wildlife habitat areas that are not connected by a suitable corridor for environmental benefits
- enhance the wildlife in the designated or surrounding area.

B Program Policy

Apply this practice to eligible cropland, 66 to 200 feet in width, that is suitably located and adapted to the establishment of permanent wildlife habitat.

A wildlife conservation plan must be developed for acreage under CRP-1 devoted to CP4B.

The following are examples of eligible and ineligible wildlife corridors.

C Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the CRP-1 period
- be included in the approved conservation plan
- include woody vegetation as determined appropriate by STC in consultation with the State Technical Committee.
### National CRP Practices (Continued)

#### CP4B Permanent Wildlife Habitat (Corridors), Noneasement (Continued)

E Requirements

The following are requirements for this practice.

- Limit C/S to the minimum minerals and seed necessary to establish an adequate cover for permanent wildlife habitat.

- Plantings must be protected from destructive fire and shall not be harvested or grazed by domestic livestock for the life of CRP-1.

  Exceptions: Managed haying and grazing or emergency haying/grazing if authorized and included in the conservation plan.

- Chemicals used in performing CP4B must be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- Noxious weeds and other undesirable plants, insects, and pests shall be controlled.

- A wildlife conservation plan must be developed for acreage under CRP-1 devoted to CP4B.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

F Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.
National CRP Practices (Continued)

CP4B Permanent Wildlife Habitat (Corridors), Noneasement (Continued)

G Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about types of plantings, spacing, and other practice specifications.

H Practice Maintenance

This practice shall be maintained without additional C/S for the CRP-1 period.

C/S shall be refunded if:

- producer destroys the cover during the CRP-1 period
- cover fails to provide enhancement of environmental benefits during the practice lifespan, unless caused by circumstances beyond the producer’s control.

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

J Program Development

County programs shall provide for any specifications and requirements that are conditions for C/S. Technical specifications may be incorporated by reference.

K Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP4D Permanent Wildlife Habitat, Noneasement

A Purpose

This practice is to establish new or maintain existing a permanent wildlife habitat cover to enhance environmental benefits for the wildlife habitat of the designated or surrounding areas.

B Program Policy

Apply this practice to eligible cropland that is suitably located and adapted to the establishment of new or maintaining existing permanent wildlife habitat.

A wildlife conservation plan must be developed for acreage under CRP-1 devoted to CP4D.

C Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the CRP-1 period
- be included in the approved conservation plan
- include woody vegetation as determined appropriate by STC in consultation with the State Technical Committee.

*--Note: C/S is authorized as a component of CP4D development of a permanent water source for wildlife.--*
## D C/S Policy

**Note:** C/S does not apply for existing cover with no enhancements.
National CRP Practices (Continued)

CP4D  Permanent Wildlife Habitat, Noneasement (Continued)

E  Requirements

The following are requirements for this practice.

- Limit C/S to the minimum minerals and seeds necessary to establish an adequate cover for permanent wildlife habitat.

- Plantings **must** be protected from destructive fire and shall not be harvested or grazed by domestic livestock for the life of CRP-1.

  **Exceptions:** Managed haying and grazing or emergency haying/grazing if authorized and included in the conservation plan.

- Chemicals used in performing CP4D **must** be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.

- A wildlife conservation plan **must** be developed for acreage under CRP-1 devoted to CP4D.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

F  Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

G  Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about types of plantings, spacing, and other practice specifications.
National CRP Practices (Continued)

CP4D  Permanent Wildlife Habitat, Noneasement (Continued)

H Practice Maintenance

The practice shall be maintained without additional C/S for the CRP-1 period. C/S shall be refunded if:

- producer destroys the cover during the CRP-1 period
- cover fails to provide enhancement of environmental benefits during the practice lifespan, unless caused by circumstances beyond the producer’s control.

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428

C/S is authorized for management activities.

J Program Development

County programs shall provide for any specifications and requirements that are conditions for C/S. Technical specifications may be incorporated by reference.

K Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP5A Field Windbreak Establishment, Noneasement

A Purpose

This practice is to establish windbreaks to improve the environmental benefits on a farm or ranch to:

- reduce cropland erosion below soil loss tolerance
- enhance the wildlife habitat on the designated area.

B Program Policy

Apply this practice to eligible cropland needing protection against serious wind erosion and to enhance the wildlife habitat on the designated area.

C Size Requirement

Field windbreaks shall be installed to the design standard in FOTG, established to reduce cropland erosion regardless of the purpose of the field windbreak. The maximum width of a field windbreak shall not exceed the design standard established to reduce cropland erosion.

D Eligibility

To be eligible for C/S, this cover practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring after establishment
- be maintained for the CRP-1 period
- be included in the approved conservation plan.
National CRP Practices (Continued)

CP5A Field Windbreak Establishment, Noneasement (Continued)

E C/S Policy

The following shows C/S policies for this practice.

<table>

<td></td>
</tr>
</tbody>
</table>
F Requirements

The following are requirements for this practice.

• When supplemental drip irrigation or plastic mulch is applied and the average annual precipitation for the area is 25 inches or less.

• Planting must be protected from destructive fire and from grazing by domestic livestock for the life of CRP-1.

• Chemicals used in performing CP5A must be:
  • Federally, State, and locally registered
  • applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

• The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.
National CRP Practices (Continued)

CP5A Field Windbreak Establishment, Noneasement (Continued)

H Environmental Concerns

Consideration of wildlife habitat, water quality and quantity, and other environmental concerns are to be evaluated in the planning and establishment of the protective measure.

I Practice Maintenance

The practice shall be maintained for the CRP-1 period. C/S shall be refunded if:

- producer destroys the cover during the CRP-1 period
- cover fails to improve environmental benefits during the practice lifespan unless the failure is caused by circumstances beyond the producer’s control.

J Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

K Program Development

Follow this subparagraph to develop State/county program.

- Consider wildlife and environmental protection when designing this practice.
- State/county practice shall identify the eligible species and provide any requirements, such as spacing, minimum planting per acre, site preparation, etc., that are conditions for C/S. Technical specifications may be incorporated by reference.

L Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP8A Grass Waterways, Noneasement

A Purpose

This practice is to:

• convey runoff from terraces, diversions, or other water concentrations without causing erosion or flooding

• improve water quality.

B Program Policy

Apply this practice to establish grass waterways on eligible cropland.

Exception: Outlet structures may be installed on ineligible land provided:

• the practice can only function by including the ineligible land that is adjacent to the location of the practice

• no eligible land is available

• the ineligible land is not enrolled

• the entire practice, eligible and ineligible land, must be included in the conservation plan.

Cost share is authorized for the outlet structure.

C Size Requirements

Grass waterways shall always be installed to meet the minimum criteria to convey water off a field. A grass waterway may be constructed to a width up to 2 times the minimum design standard if requested by the producer to meet the producer’s objectives, not to exceed a width of 100 feet.

Note: A grass waterway shall not exceed a maximum width of 100 feet.
National CRP Practices (Continued)

CP8A Grass Waterways, Noneasement (Continued)

D Eligibility

To be eligible for C/S, this practice shall:

- be required by the approved conservation plan
- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the CRP-1 period.

E C/S Policy

The following shows C/S policies for this practice.

<table>
<thead>
<tr>
<th>IF the component is...</th>
<th>THEN C/S is...</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>subsurface drains as the sole component of the practice</td>
<td>not authorized.</td>
</tr>
<tr>
<td>subsurface drains that serve as mains to laterals elsewhere in field</td>
<td></td>
</tr>
<tr>
<td>fencing</td>
<td></td>
</tr>
</tbody>
</table>

F Requirements

The following are requirements for this practice.

- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.

- The seeded acreage shall not be harvested or grazed by domestic livestock for the life of CRP-1 unless grazing is incidental to the normal gleaning of the crop residue in the field according to subparagraph 720 A.

- The practice shall have periodic management activities performed, including mowing, according to the conservation plan and the NRCS technical standard, during the life of---* CRP-1, as determined by COC.
National CRP Practices (Continued)

CP8A Grass Waterways, Noneasement (Continued)

G Environmental Concerns

Consider wildlife and other environmental concerns when establishing the protective measure.

H Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

I Practice Maintenance

The practice shall be maintained for the CRP-1 period. C/S shall be refunded if:

- producer destroys the practice during the CRP-1 period
- producer does not maintain the practice during the practice lifespan.

J Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

K Program Development

County programs shall provide for any specifications and requirements that are conditions for C/S. Technical specifications may be incorporated by reference.

L Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP9  Shallow Water Areas for Wildlife

A  Purpose

This practice is to develop or restore shallow water areas to an average depth of 6 to 18 inches for wildlife. The shallow water area must provide a source of water for wildlife for the majority of the year.

Exception:  For areas west of the 100th meridian that receive less than 25 inches of annual precipitation, the shallow water area must provide a source of water for wildlife for a minimum of 4 months of the year.

Note:  This is not a pond development or wetland restoration practice. However, this practice may be constructed on suitable hydric and nonhydric soils.

B  Program Policy

Apply this practice to eligible cropland that is suitably located and adapted to the development or restoration of a shallow water area for wildlife that will provide a source of water for the majority of the year.

Exception:  For areas west of the 100th meridian that receive less than 25 inches of annual precipitation, the shallow water area must provide a source of water for wildlife for a minimum of 4 months of the year.

The practice must include an adequate buffer area of perennial vegetation to protect the water quality and provide wildlife habitat. The soil types, slope, and conservation practices applied on the field shall determine the width of the buffer. However, the buffer width shall not:

- be less than 20 feet
- exceed an average maximum width of 120 feet.
National CRP Practices (Continued)

CP9  Shallow Water Areas for Wildlife (Continued)

B  Program Policy (Continued)

The practice, including the buffer area, shall not exceed 10 acres per tract. The total acres enrolled in CRP devoted to CP9 shall not exceed 10 acres per tract. Multiple CRP-1’s to enroll land to be devoted to CP9 on the same tract are not authorized. All acres to be devoted to CP9 must be included on one CRP-1 per tract.

Example 1:  Producer offers to enroll 3 separate shallow water areas on the same tract. Each shallow water area will be located in a separate field on the tract. One shallow water area, including the required buffer area, will be 4 acres in size and the other 2 shallow water areas will be 1 acre each, including the required buffer area. All acres to be devoted to CP9 must be included on one CRP-1 for the tract. Therefore, the producer would complete one CRP-2 and one CRP-1 for the 6 total acres to be devoted to CP9 on the tract. Only 1 conservation plan would be developed for the 6 acres of CP9. No additional acres on the tract can be enrolled to be devoted to CP9.

Example 2:  Producer offers to enroll 2 adjoining 10 acre shallow water areas on the same tract. Shallow water areas shall not exceed 10 acres per tract. Accordingly, the offer would be rejected.

Example 3:  On May 1, 2000, Jane Smith enrolls 6 acres to be devoted to CP9. On February 1, 2001, Jane Smith offers to enroll 4 acres to be devoted to CP9 on the same tract as the 6 acres enrolled in May 2000. Multiple CRP-1’s to enroll land to be devoted to CP9 on the same tract are not authorized. Accordingly, the offer would be rejected.

CP21’s are not eligible to be used in conjunction with CP9’s because acreage devoted to CP9 must include an adequate buffer to protect the shallow water area.
National CRP Practices (Continued)

CP9  Shallow Water Areas for Wildlife (Continued)

C  Eligibility

To be eligible for C/S, this practice shall:

- be included in the approved conservation plan
- improve environmental benefits to an acceptable level
- prevent degradation of environmental benefits from recurring
- be maintained for the life of CRP-1
- be protected by an adequate buffer to protect the shallow water area
- provide a source of water for wildlife for the majority of the year.

Exception:  For areas west of the 100\textsuperscript{th} meridian that receive less than 25 inches of annual precipitation, the shallow water area \textbf{must} provide a source of water for wildlife for a minimum of 4 months of the year.

E  Requirements

The following are requirements for this practice.

- The practice **must** provide a source of water for wildlife for the majority of the year.

  **Exception:** For areas west of the 100th meridian that receive less than 25 inches of annual precipitation, the shallow water area **must** provide a source of water for wildlife for a minimum of 4 months of the year.

- The water area shall be an average of 6 to 18 inches in depth.
National CRP Practices (Continued)

CP9  Shallow Water Areas for Wildlife (Continued)

E  Requirements (Continued)

• The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.

• The practice, including the buffer area, shall not exceed 10 acres per tract. The total acres enrolled in CRP devoted to CP9 shall not exceed 10 acres per tract.

• Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.

• Limit C/S to the minimum work and materials necessary to develop or restore the shallow water area for wildlife and establish an adequate cover to improve environmental benefits.

• The practice must be established and maintained according to the practice standards in FOTG.

• Planting or sowing of the approved cover shall be completed within 12 months if the effective date of CRP-1. See paragraph 426 for exceptions.

• The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

F  Environmental Concerns

Consider wildlife and other environmental concerns when establishing this practice.

G  Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG. C/S shall be refunded if:

• producer destroys the practice during the life of CRP-1

• producer fails to maintain the practice during the life of CRP-1

• the cover fails to provide adequate protection during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.
National CRP Practices (Continued)

CP9  Shallow Water Areas for Wildlife (Continued)

H  Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

I  Program Development

County programs shall provide for any specifications and requirements that are conditions for C/S. Technical specifications may be incorporated by reference.

J  Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.

*--CP10  Vegetative Cover - Grass - Already Established (CP10 Eligible to be Offered Before March 14, 2011, Only)

A  Program Policy

Beginning March 14, 2011, CP10 is no longer available for new offers. For offers submitted before March 14, 2011, this practice code is used to identify land:--*

- under CRP-1, if a grass cover approved for the applicable signup is already established
  
  **Note:** Contract management activity may be required as determined by COC, according to paragraph 428.

- not under CRP-1, with a grass cover approved for the applicable signup already established.
  
  **Note:** Contract management activity may be required as determined by COC, according to paragraph 428.

C/S is authorized for:

- performance of required management activity
- *--pollinator habitat as a component of CP10 before March 14, 2011
- wildlife water development as a component of CP10 before March 14, 2011, only.--*

Technical practice codes 327, 338, 340, 342, 394, 512, 548, 595, 614, 644, 645, and 647 may be used for CP10.
National CRP Practices (Continued)

*--CP11 Vegetative Cover - Trees - Already Established (CP11 Eligible to be Offered Before March 14, 2011, Only)

A Program Policy

Beginning March 14, 2011, CP11 is no longer available. For offers submitted before March 14, 2011, this practice code is used to identify land established to trees that is under--* CRP-1 at the time the acreage is offered and the producer elects to reoffer the acreage to be devoted to trees.

*--Notes: Thinning and/or creating open areas in eligible existing tree stands are not a separate practice. The open areas shall be considered CP11.

Example: Jane Smith offered in signup 39 100 acres of existing trees under CRP-1. Mrs. Smith offered to thin the existing trees and create 15 acres of openings of native grass and shrub plantings best suited for wildlife in the area. All 100 acres should have been offered as CP11.--*

See subparagraph B for C/S policy for this practice.

Not applicable to signups 10 through 13 and continuous signup.
National CRP Practices (Continued)

CP11  Vegetative Cover - Trees - Already Established (Continued)

B  C/S Policy

The following shows C/S policies for planting of approved native grasses and/or shrubs within the 10 to 20 percent open areas created within the existing tree stand.

C/S is only authorized for the planting of approved cover within the open areas. C/S is not authorized for any component not listed in the following table.

**Important:** C/S is not authorized for natural regeneration of native grass vegetation within the 10 to 20 percent openings.

<table>
<thead>
<tr>
<th>IF the component is...</th>
<th>AND the justification is...</th>
<th>THEN C/S is...</th>
</tr>

</tr>
</tbody>
</table>

C  Technical Responsibility

Technical responsibility for the practice shall be assigned to FS. If an FS representative is not available, this responsibility may be redelegated to NRCS or TSP.
National CRP Practices (Continued)

CP12  Wildlife Food Plot

A  Purpose

This practice is to establish annual or perennial wildlife food plots that will enhance:

- wildlife
- wildlife habitat.

B  Program Policy

Apply this practice to CRP land that is suitably located and adapted to the establishment of annual or perennial wildlife food plots.

C  Objectives

This practice shall:

- enhance wildlife, wildlife habitat, or both
- improve environmental benefits below the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be included in the approved conservation plan
- be carried out as specified in the approved conservation plan.

D  C/S Policy

C/S is not authorized for this practice.
National CRP Practices (Continued)

CP12  Wildlife Food Plot (Continued)

E  Requirements

Participants who enroll land under practice CP12 must maintain the CP12 acreage in this practice for the life of the contract.

For CP12 acreage planted to annual crops:

- After establishment, the crop should be left standing through the winter or at least until the first of March of the following year. Depending on its condition, it may be left standing through the spring and replanted in the late spring or early summer.

- All of the required acreage must have enough plant materials to provide an adequate food source each year, however, all the acreage does not need to be planted every year.

Example: Producer A plants 5.0 acres to corn in 2010. If there is still an adequate amount of food in the corn in 2011, 2.5 acres of the corn may be left standing and 2.5 acres may be planted to wheat. In 2012, the remaining 2.5 acres of corn must be replanted. If there is still an adequate amount of wheat, the 2.5 acres may be left standing until 2013.

- Contact the local NRCS or Washington Department of Fish and Wildlife to determine what constitutes an adequate amount of food to allow the crop to remain for a second year.
**National CRP Practices (Continued)**

**CP12  Wildlife Food Plot (Continued)**

**E  Requirements**

The following are requirements for this practice.

- Use the NRCS standards and specifications for wildlife upland or wetland habitat management for the desired wildlife species to:
  - establish suitable plant species for food plots
  - determine food plot location
  - determine total acres to be devoted to food plots.

- Individual food plots shall **not** exceed 5 acres in size and shall **not** be immediately adjacent.

- Food plots **must** be separated by a sufficient distance to maximize wildlife benefits and accessibility.

- This practice may be used in conjunction with the following practices only:
  - CP1
  - CP2
  - CP3
  - CP3A
  - CP4D
  - **--CP10 before March 14, 2011**
  - **CP11 before March 14, 2011--**
  - CP25.

**Note:** The practice used in conjunction with CP12 determines the length of CRP-1. CP12’s **must** be the same length of the practice used in conjunction with CP12.

- Food plots may be at 1 location throughout the life of CRP-1 or may be relocated each year. If relocated, the previous food plot **must** be seeded to an approved permanent vegetative cover at the producer’s expense.

- Minerals necessary to ensure establishment of a successful food plot shall be applied.
National CRP Practices (Continued)

CP12  Wildlife Food Plot (Continued)

E  Requirements (Continued)

- During installation, degradation of environmental benefits shall be kept on an acceptable level.

  **Example:** Using no-till seeding if appropriate.

- Food plots shall be planted in the areas of CRP acreage that:
  - minimize adversity to environmental benefits
  - maximize wildlife benefits and accessibility.

- Chemicals used in performing this practice **must** be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

F  CRP-1 Revisions

Existing CRP-1’s may be revised to include planting wildlife food plots if:

- determined necessary and feasible by TSP
- included in the approved conservation plan.

**Note:** Adding a food plot to an existing CRP-1 does **not** extend the length of CRP-1.

G  Program Development

The county practice shall identify the eligible species and provide any requirements, such as:

- spacing
- minimum planting per acres
- site preparation
- cultivation.

Approved planting methods may be included or incorporated by reference to published technical standards.

H  Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP15A Establishment of Permanent Vegetative Cover (Contour Grass Strips) Noneasement

A Purpose

The purpose of the CP15A is to reduce erosion and control runoff by placing strips of perennial vegetation on the contour, alternated with wider cultivated strips. The purpose of this practice is not met when CP15A is alternated with strips that are also in a perennial cover. Allowing producers to enroll land in CP15A when the adjacent land is already in a perennial cover does not meet the purpose of the CP15A and could result in producers enrolling all of a field in CRP but receiving a higher rental rate on the CP15A acreage, without justification. To address this concern, the STC and NRCS have established the following policies.

<table>
<thead>
<tr>
<th>If the land in the CP15A offer is within a field/acreage that is…</th>
<th>Then…</th>
</tr>
</thead>
<tbody>
<tr>
<td>being cropped annually</td>
<td>the offer may be determined to meet the purpose of the CP15A and eligible if all other eligibility criteria are met</td>
</tr>
<tr>
<td>in a non-CRP perennial cover</td>
<td>the offer shall be determined to not meet the purpose of the CP15A and shall be disapproved</td>
</tr>
<tr>
<td>in a CRP perennial cover under a general CRP contract and both the CP15A acreage and surrounding general CRP acreage have the same contract expiration date and could be offered in one, new general CRP contract</td>
<td>the offer shall be determined to not meet the purpose of the CP15A and the CP15A offer shall be disapproved</td>
</tr>
<tr>
<td>in a CRP perennial cover under a general CRP contract, but the CP15A acreage and the surrounding general CRP acreage have different contract expiration dates and cannot be offered in one, new general CRP contract</td>
<td>the CP15A offer may be determined to meet the purpose of the CP15A and eligible if all other eligibility criteria are met</td>
</tr>
<tr>
<td>in a CRP perennial cover under a general CRP contract with the same contract expiration date but general CRP acreage will be returned to annual crop production</td>
<td>the offer may be determined to meet the purpose of the CP15A and eligible if all other eligibility criteria are met</td>
</tr>
</tbody>
</table>
National CRP Practices (Continued)

CP15A Establishment of Permanent Vegetative Cover (Contour Grass Strips) Noneasement (Continued)

A Purpose (Continued)

<table>
<thead>
<tr>
<th>In the case of an expiring CP15A contract where:</th>
<th>Then…</th>
</tr>
</thead>
<tbody>
<tr>
<td>• one or more buffers meet the criteria on WA Page 44 to be re-enrolled, and</td>
<td>only the eligible buffers may be re-enrolled as a CP15A practice</td>
</tr>
<tr>
<td>• one or more buffers on the same contract do not meet the criteria on WA Page 44 to be re-enrolled, and</td>
<td></td>
</tr>
<tr>
<td>• the eligible and ineligible buffers are unrelated (i.e., in different fields)</td>
<td></td>
</tr>
</tbody>
</table>

When the County Office does not know if a general signup will be held, or if the combined *--CP15A acreage and general CRP acreage offered by the producer in a general signup was not accepted, an offer to re-enroll the CP15A acreage can be accepted. This offer should not be approved until it is clear the producer will not be able to re-enroll the CP15A acreage and general CRP acreage in a new general CRP contract and the producer will be returning land surrounding the buffer to production.--*
Exhibit 11

National CRP Practices (Continued)

CP15A Establishment of Permanent Vegetative Cover (Contour Grass Strips), Noneasement

A Purpose

This practice is to establish strips of permanent vegetative cover generally following the contour on eligible cropland alternated with wider cultivated strips farmed on the contour that will reduce erosion and control runoff.

Note: This practice is not to develop or establish wildlife habitat.

Field border areas may be included in the contour buffer provided they are needed to drain water from the field as an integral part of the contour buffer system.

Important: NRCS or TSP must document, in writing, that the field border area is needed as an integral part of the contour buffer system to drain water from the field and for the contour buffer system to function properly.

Note: NRCS or TSP will determine the documentation needed to support the need for field borders consistent with FOTG standards. The documentation must be in the case file.

B Program Policy

Apply this practice on eligible cropland to establish permanent vegetative cover for contour grass strips alternated with wider cultivated strips that are farmed on the contour. Contour grass strips that are not alternated with wider cultivated strips are not eligible for enrollment.

Contour grass strips shall be installed to the minimum design standard to reduce erosion and control runoff.

Important: Contour grass strips are not eligible to be installed on terraces. Contour grass strips may be used in conjunction with terraces as an overall conservation management system (contour grass strips installed between terraces) if needed to control erosion and runoff on eligible cropland.
National CRP Practices (Continued)

CP15A Establishment of Permanent Vegetative Cover (Contour Grass Strips), Noneasement (Continued)

C Size Requirements

Minimum standards for the width of a contour buffer strip and the number of strips needed in a field will depend on:

- soil types
- percent slope and slope lengths
- conservation practices applied on the field.

The lower most contour buffer strip in a field may be up to 2 times the minimum width recommended for the practice. The minimum acceptable width for a contour buffer strip:

- designed for soil erosion control purposes is 15 feet
- seeded to grass or a grass/legume mixture is 15 feet
- seeded to legumes only is 30 feet.

Note: Legumes are unlikely to persist for the duration of CRP-1. Therefore, reseeding, at the producer’s expense, may be necessary.

A contour buffer strip may be applied up to a maximum width of 30 feet, if needed to accomplish the purpose of the practice. When the minimum design specification exceeds 30 feet, the minimum design specification is the maximum average width that may be enrolled.

Note: The lower most contour buffer strip in a field may be a maximum of 60 feet wide.

The maximum width of field border areas that may be enrolled is 15 feet. Field border areas may be included in the contour buffer only if they are needed to drain water from the field as an integral part of the contour buffer system.

Contour buffer strips must be installed to meet the minimum standards to reduce erosion and control runoff.
National CRP Practices (Continued)

CP15A Establishment of Permanent Vegetative Cover (Contour Grass Strips), Noneasement (Continued)

D Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the CRP-1 period
- be required by the approved conservation plan.
### E C/S Policy

The following shows C/S policies for this practice.

</tbody>
</table>
National CRP Practices (Continued)

CP15A Establishment of Permanent Vegetative Cover (Contour Grass Strips), Noneasement (Continued)

F Requirements

The following are requirements for this practice.

- **Must** be for the purpose of erosion and runoff control.
- **Must** be alternated with wider cultivated strips that are farmed on the contour.
- Not eligible to be installed on terraces.
- Limit C/S to the minimum minerals and seed necessary to establish adequate cover to improve environmental benefits.
- Chemicals used in performing the practice **must** be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.
- The seeded acreage shall not be harvested or grazed by domestic livestock for the life of CRP-1 unless grazing is incidental to the normal gleaning of the crop residue in the field according to subparagraph 720A.*
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.
National CRP Practices (Continued)

CP15A Establishment of Permanent Vegetative Cover (Contour Grass Strips), Noneasement (Continued)

H Environmental Concerns

Consider wildlife concerns when making determinations about seed varieties and other practice specifications.

I Practice Maintenance

The practice shall be maintained without additional C/S for the CRP-1 period. C/S shall be refunded if:

- producer destroys the cover during the CRP-1 period
- cover fails to provide enhancement of environmental benefits during the practice lifespan unless caused by circumstances beyond the producer’s control.

J Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

K Program Development

County practice shall include the practice lifespan. County programs shall also provide details of any requirements, such as seedbed preparation, seeding dates, eligible seed, etc., that are conditions for C/S for the practice. STC may establish these requirements.

L Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP15B Establishment of Permanent Vegetative Cover (Contour Grass Strips) on Terraces

A Purpose

This practice is to establish vegetative cover on terraces to enhance water quality and reduce soil erosion. This practice is only applicable on terraces that are no longer under practice lifespan to ensure that the long-term functions of the terrace are maintained.

Notes: This practice is not to develop or establish wildlife habitat. Wildlife concerns may be considered when making determinations about seed varieties.

Important: NRCS or TSP must document that CP15B is needed and feasible on AD-862 and CRP-2. This practice is only available on existing terraces that are no longer under the practice lifespan or other agreement to maintain the terrace practice.

NRCS or TSP shall determine the documentation needed to support the need for CP15B consistent with FOTG standards. The documentation must be in the case file.

Example: A terrace was installed under ACP in 1985. The practice lifespan was 10 years. The terrace is not in a vegetative cover and is functional. NRCS or TSP determines grass seeding is needed and feasible to enhance water quality and reduce soil erosion. This terrace is eligible to be enrolled in CRP as CP15B.

This practice is not eligible for PIP or CRP-SIP.

B Program Policy

Apply this practice on eligible cropland on which a terrace, which is not planted to a vegetative cover, is no longer under the practice lifespan, but seeding is needed and feasible consistent with the purposes of the practice. The area to be included is the actual terrace itself and an adequate buffer. See subparagraph C for size requirements of the buffer area.

Contour grass strips on terraces shall be installed to the minimum design standard to ensure long-term viability of the terraces to reduce erosion and enhance water quality.
CP15B Establishment of Permanent Vegetative Cover (Contour Grass Strips) on Terraces (Continued)

C Size Requirements

Minimum size standard for a contour buffer strip on terraces shall be the minimum size necessary to protect the terraces. It may require a buffer not to exceed 10 feet on the upslope and downslope portion of the terrace. The maximum width of CP15B must not exceed 60 feet, including the buffer areas.

The practice shall be designed to control soil erosion consistent with NRCS FOTG.

The following diagrams provide examples of the maximum width for CP15B.

Example 1 Grassed-Back Terrace

Note: The area of CP15B must not exceed 60 feet from the toe of the backslope side of the terrace to the channel upslope, including the 10-foot buffer area on either side of the terrace.
National CRP Practices (Continued)

CP15B Establishment of Permanent Vegetative Cover (Contour Grass Strips) on Terraces (Continued)

C Size Requirements (Continued)

Example 2 Broad-Based Terraces

Note: The area of CP15B is measured from the beginning of the cutslope to the end of the fill slope. A 10-foot buffer may be included on either side of the terrace. In no case shall CP15B exceed 60 feet wide, including the 10-foot buffer area on either side of the terrace.
CP15B Establishment of Permanent Vegetative Cover (Contour Grass Strips) on Terraces (Continued)

D Eligibility

To be eligible for C/S, this practice shall:

- be on eligible cropland
- be installed on terraces that NRCS or TSP determines are properly functioning and are no longer protected by practice lifespan or other agreement to maintain the terrace practice

**Note:** An adjacent buffer, not to exceed 10 feet on the upslope and downslope, may be installed provided NRCS or TSP determines it is needed and feasible.

- not be installed on terraces that are currently in a vegetative cover
- be applicable only where seeding is needed and feasible
- be maintained for the CRP-1 period
- be included in the approved conservation plan.

**Examples:**

A producer would like to enroll into CRP an existing terrace that has been in grass cover for the past 5 years. The terrace would **not** be eligible.

A producer would like to enroll into CRP a terrace. The terrace, as determined by NRCS or TSP, is not functioning properly. The terrace would **not** be eligible unless it is repaired.
National CRP Practices (Continued)

CP15B Establishment of Permanent Vegetative Cover (Contour Grass Strips) on Terraces (Continued)

</tbody>
</table>
CP15B Establishment of Permanent Vegetative Cover (Contour Grass Strips) on Terraces (Continued)

**F Requirements**

The following are requirements for this practice.

- **Must** meet cropping history.

- **Must not** be under a practice lifespan or other agreement to maintain the terrace system, as determined by COC.

- Seeding the terrace **must** be needed and feasible to accomplish the purposes of the practice.

- **Must** be installed on a terrace that NRCS or TSP determines is properly functioning.

- **Must** only be for the actual terrace and a buffer not to exceed 10 feet on the upslope and downslope side of the structure.

**Note:** CP15B **must not** exceed a maximum width of 60 feet, including the buffer areas.

- Limit C/S to the minimum minerals and seed necessary to establish adequate cover consistent with NRCS FOTG.

- Chemicals used in performing this practice **must** be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.

- The seeded acreage shall not be harvested or grazed by domestic livestock for the life of CRP-1 unless grazing is incidental to the normal gleaning of the crop residue in the field *--according to subparagraph 720A.--*

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.
National CRP Practices (Continued)

CP15B Establishment of Permanent Vegetative Cover (Contour Grass Strips) on Terraces (Continued)

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

H Environmental Concerns

Although the purpose of the practice is not to establish wildlife habitat, consider wildlife concerns when making determinations about seed varieties and other practice specifications.

I Practice Maintenance

The practice shall be maintained without additional C/S for the CRP-1 period. C/S shall be refunded if:

- producer destroys the cover during the CRP-1 period
- cover fails to provide enhancement of environmental benefits during the practice lifespan unless caused by circumstances beyond the producer’s control.

J Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

K Program Development

County practice language shall include the practice lifespan. County program language shall also provide details of any requirements, such as seedbed preparation, seeding dates, eligible seed, etc., that are conditions for C/S for the practice. STC may establish these requirements.

L Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP16A Shelterbelt Establishment, Noneasement

A Purpose

This practice is to establish shelterbelts on a farm or ranch to:

- enhance the wildlife habitat on the designated area
- save energy
- protect farmsteads or livestock areas.

B Program Policy

Apply this practice to eligible cropland to protect farmsteads or livestock areas against serious wind and to save energy.

C Size Requirements

Shelterbelts shall be installed to design standards in FOTG, established to protect farmsteads or livestock areas regardless of the purpose of the shelterbelt. A shelterbelt may be applied up to a maximum width of up to 2 times the design standard for protecting farmsteads or livestock areas, if requested by the producer to accomplish the purpose of protecting farmsteads or livestock areas.

D Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to an acceptable level
- prevent degradation of environmental benefits from recurring after establishment
- be maintained for the CRP-1 period
- be included in the approved conservation plan.
National CRP Practices (Continued)

CP16A   Shelterbelt Establishment, Noneasement (Continued)

National CRP Practices (Continued)

CP16A Shelterbelt Establishment, Noneasement (Continued)

F Requirements

The following are requirements for this practice.

- When supplemental drip irrigation or plastic mulch is applied and the average precipitation for the area is 25 inches or less.

- Planting must be protected from destructive fire and from grazing by domestic livestock for the life of CRP-1.

- Chemicals used in performing this practice must be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.
CP16A Shelterbelt Establishment, Noneasement (Continued)

H Practice Maintenance

The practice shall be maintained for the CRP-1 period. C/S shall be refunded if:

- producer destroys the cover during the CRP-1 period
- cover fails to improve environmental benefits during the practice lifespan unless the failure is caused by circumstances beyond the producer’s control.

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

J Program Development

The following should be considered when developing this practice.

- Consider wildlife and environmental protection when designing this practice.
- State/county practice shall identify the eligible species and provide any requirements, such as spacing, minimum planting per acre, site preparation, etc., that are conditions for C/S. Technical specifications may be incorporated by reference.

K Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP17A Living Snow Fences, Noneasement

A Purpose

This practice is to establish living snow fences on a farm or ranch to:

- manage snow
- provide living screen
- enhance the wildlife habitat on the designated area.

B Program Policy

Apply this practice to eligible cropland to protect against drifting snow on:

- lanes
- roads
- railroads
- public facilities.

C Size Requirements

Living snow fences shall be installed to the design standard in FOTG, established for snow management regardless of the purpose of the living snow fence. The maximum width, including the snow catch area, of a field windbreak shall not exceed the design standard for snow management.

D Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to below the soil loss tolerance
- prevent degradation of environmental benefits from recurring after establishment
- be maintained for the CRP-1 period
- be included in the approved conservation plan.
**E C/S Policy**

The following shows C/S policies for this practice.

<table>
<thead>
<tr>
<th>IF the component is...</th>
<th>THEN C/S is...</th>
</tr>
</thead>
<tbody>
<tr>

CP17A  Living Snow Fences, Noneasement (Continued)

F  Requirements

The following are requirements for this practice.

- When supplemental drip irrigation or plastic mulch is applied and the average annual precipitation for the area is 25 inches or less.

- Planting **must** be protected from destructive fire and from grazing by domestic livestock for the life of CRP-1.

- Chemicals used in performing this practice **must** be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

G  Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.
National CRP Practices (Continued)

CP17A Living Snow Fences, Noneasement (Continued)

H Practice Maintenance

The practice shall be maintained for the CRP-1 period. C/S shall be refunded if:

- producer destroys the cover during the CRP-1 period
- cover fails to improve environmental benefits during the practice lifespan, unless the failure is caused by circumstances beyond the producer’s control.

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

J Program Development

Follow this subparagraph to develop State/county program.

- Consider wildlife and environmental protection when designing this practice.
- State/county practice shall identify the eligible species and provide any requirements, such as spacing, minimum planting per acre, site preparation, etc., that are conditions for C/S. Technical specifications may be incorporated by reference.

K Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP18B Establishment of Permanent Vegetation to Reduce Salinity, Noneasement

A Purpose

This practice is to either establish permanent salt tolerant vegetative cover within saline seep areas or establish permanent vegetative cover in areas causing seeps, including trees or shrubs, on eligible cropland that will improve the environmental benefits of a farm or ranch.

The cover must address the resource problem with the minimum acreage needed to control the saline seep.

B Program Policy

Apply this practice to establish either of the following on eligible cropland:

- permanent salt tolerant vegetative cover
- permanent vegetative cover.

The use of this practice is only permitted if the technical recommendations are based on a sound technical basis that will address the resource problem. Only the minimum number of acres needed to control the saline seep formation may be enrolled.

Example: A technician recommends that a 40-acre field be enrolled in CRP to control a 1-acre saline seep. The technician is recommending enrollment of excessive acreage. The technician must focus the recharge area to only the portion of the field associated to the saline seep development.

C Eligibility

To be eligible for C/S, this practice shall:

- be required by the approved conservation plan
- improve environmental benefits to less than the soil loss tolerance
- be maintained for the CRP-1 period on areas causing seeps or the seep areas
- prevent degradation of environmental benefits from recurring after establishment.
National CRP Practices (Continued)

CP18B Establishment of Permanent Vegetation to Reduce Salinity, Noneasement (Continued)

National CRP Practices (Continued)

CP18B Establishment of Permanent Vegetation to Reduce Salinity, Noneasement (Continued)

E Requirements

The following are requirements for this practice.

- The saline seep and recharge area must meet the definitions in Exhibit 2.
  
  **Note:** For re-enrolled acreage, NRCS or TSP has flexibility on the characteristics of the saline seep, including soil electrical conductivity, sodium absorption rate, pH, and water level. NRCS or TSP should evaluate the potential that the saline seep would occur without vegetative cover in the discharge and/or recharge area.

- TSP must use the best available data to define the recharge area to solve the resource problem with the minimum amount of acres.

- For seeps less than 5 acres, the recharge area cannot exceed a ratio of 10 acres of recharge to 1 acre of seep, which meets the definition in Exhibit 2.

- A map must be clearly marked with the saline seep, the exact acreage of the saline seep, and the recharge area.

- Acreage shall not exceed 50 acres, unless NRCS SRC or designee and at least 1 independent technical peer with extensive knowledge in saline seeps review the practice before approval. For States with no independent technical peer, SRC or designee shall serve that role.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.

- Limit C/S to the minimum minerals and seed necessary to establish an adequate cover to improve environmental benefits.

- Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

- Chemicals used in performing the practice must be:
  
  - Federally, State, and locally registered
  
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
  
  - Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid adverse impacts to surrounding lands.
  
  - The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.
National CRP Practices (Continued)

CP18B Establishment of Permanent Vegetation to Reduce Salinity, Non-Assignment (Continued)

F Environmental Concerns

Consider wildlife and other environmental concerns when establishing the protective measure.

G Practice Maintenance

The practice shall be maintained for the CRP-1 period.

C/S shall be refunded if either of the following applies:

- the producer destroys the practice during the CRP-1 period
- the cover fails to improve the environmental benefits during the practice lifespan, unless the failure is caused by circumstances beyond the producer’s control.

H Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

I Program Development

Follow this subparagraph to develop the county program.

- County programs shall provide the requirements that are conditions for C/S.
- STC may establish these requirements.

J Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP18C Establishment of Permanent Salt Tolerant Vegetative Cover, Noneasement

A Purpose

This practice is to establish permanent salt tolerant vegetative cover on eligible cropland with existing high water tables that will improve the environmental benefits of a farm or ranch.

The cover must address the resource problem with the minimum acreage needed to control the saline seep.

B Program Policy

Apply this practice to establish permanent salt tolerant vegetative cover on eligible cropland.

The use of this practice is only permitted if the technical recommendations are based on a sound technical basis that will solve the resource problem. Only the minimum number of acres needed to control the saline seep formation may be enrolled.

Example: A technician recommends that a 40-acre field be enrolled in CRP to control a 1-acre saline seep. The technician is recommending enrollment of excessive acreage. The technician must focus the recharge area to only the portion of the field associated to the saline seep development.

C Eligibility

To be eligible for C/S, this practice shall:

- be required by the approved conservation plan
- improve environmental benefits to less than the soil loss tolerance
- be maintained for the CRP-1 period on areas with existing highwater tables
- prevent degradation of environmental benefits from recurring after establishment.
National CRP Practices (Continued)

National CRP Practices (Continued)

CP18C Establishment of Permanent Salt Tolerant Vegetative Cover, Noneasement (Continued)

E Requirements

The following are requirements for this practice.

- The saline seep must meet the definition according to Exhibit 2.

  **Note:** For re-enrolled acreage, NRCS or TSP has flexibility on the characteristics of the saline seep, including soil electrical conductivity, sodium absorption rate, pH, and water level. NRCS or TSP should evaluate the potential that the saline seep would occur without vegetative cover in the discharge and/or recharge area.

- NRCS or TSP must use the best available data to define the recharge area to solve the resource problem with the minimum amount of acres.

- For seeps less than 5 acres, the recharge area cannot exceed a ratio of 10 acres of recharge to 1 acre of seep, which meets the definition in Exhibit 2.

- A map must be clearly marked with the saline seep, the exact acreage of the saline seep, and the recharge area.

- Acreage shall not exceed 50 acres, unless NRCS SRC or designee and at least 1 independent technical peer with extensive knowledge in saline seeps review the practice before approval. For States with no independent technical peer, SRC or designee shall serve that role.

- NRCS will issue guidance on technical assistance job approval authority for the practice.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.

- Limit C/S to the minimum minerals and seed necessary to establish an adequate cover to improve environmental benefits.

- Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
  - Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid adverse impacts on surrounding lands.
  - The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.
CP18C  Establishment of Permanent Salt Tolerant Vegetative Cover, Noneasement (Continued)

F Environmental Concerns

Consider wildlife and other environmental concerns when establishing the protective measure.

G Practice Maintenance

The practice shall be maintained without additional C/S for the useful life of the practice.

C/S shall be refunded if either of the following applies:

- the producer destroys the practice during the CRP-1 period
- the cover fails to improve the environmental benefits during the practice lifespan, unless the failure is caused by circumstances beyond the producer’s control.

H Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

I Program Development

Follow this subparagraph to develop the county program.

- County programs shall provide the requirements that are conditions for C/S.
- STC may establish these requirements.

J Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP21 Filter Strips

A Purpose

This practice is to remove nutrients, sediment, organic matter, pesticides, and other pollutants from surface runoff and subsurface flow by deposition, absorption, plant uptake, denitrification, and other processes, and thereby reduce pollution and protect surface water and subsurface water quality while enhancing the ecosystem of the water body.

B Program Policy

For cropland to be eligible to be enrolled in CRP to be devoted to CP21, both of the following must be met:

- COC determines both of the following:
  - all cropland eligibility requirements in subparagraph 181A are met
  - the cropland offered is immediately adjacent and parallel to 1 of the following:
    - stream having perennial flow
    - seasonal stream

**Important:** USGS maps shall not be solely used to determine seasonal streams. A seasonal stream is a stream that contains water for only part of the year but more than just during and/or after rainfall or snowmelt. Seasonal streams do not include:

- wetlands of any type
- land devoted to CP9
- terrace channels
- grass or sod waterways
- gullies
- narrow or wide wash
- roadside ditches
- well, spring, or seep
- marsh or swamp
- center pivot irrigation corners
- irrigation canals
- tail water recovery pit/system.

**Note:** See paragraph 181 for more information about seasonal and perennial streams.
National CRP Practices (Continued)

CP21 Filter Strips

A Purpose

The purpose of the CP21 is to reduce nutrients, sediment, organic matter, pesticides, and other pollutants from surface runoff and subsurface flow. The purpose of this practice is not met when CP21 is directly bordered by land that is also in a perennial cover. Allowing producers to enroll land in CP21 when the adjacent land is already in a perennial cover does not meet the purpose of the CP21 and could result in producers enrolling all of a field in CRP but receiving a higher rental rate on the CP21 acreage, without justification. To address this concern the STC and NRCS have established the following policies.

<table>
<thead>
<tr>
<th>If the land in the CP21 offer is within a field/acreage that is…</th>
<th>Then…</th>
</tr>
</thead>
<tbody>
<tr>
<td>being cropped annually</td>
<td>the offer may be determined to meet the purpose of the CP21 and eligible if all other eligibility criteria are met</td>
</tr>
<tr>
<td>in a non-CRP perennial cover</td>
<td>the offer shall be determined to not meet the purpose of the CP21 and shall be disapproved unless the non-CRP land is utilized for livestock production</td>
</tr>
<tr>
<td>in a CRP perennial cover under a general CRP contract and both the CP21 acreage and surrounding general CRP acreage have the same contract expiration date and could be offered in one, new general CRP contract</td>
<td>the offer shall be determined to not meet the purpose of the CP21 and the CP21 offer shall be disapproved</td>
</tr>
<tr>
<td>in a CRP perennial cover under a general CRP contract, but the CP21 acreage and the surrounding general CRP acreage have different contract expiration dates and cannot be offered in one, new general CRP contract</td>
<td>the CP21 offer may be determined to meet the purpose of the CP21 and eligible if all other eligibility criteria are met</td>
</tr>
<tr>
<td>in a CRP perennial cover under a general CRP contract with the same contract expiration date but general CRP acreage will be returned to production</td>
<td>the offer may be determined to meet the purpose of the CP21 and eligible if all other eligibility criteria are met</td>
</tr>
</tbody>
</table>
A Purpose (Continued)

In the case of an expiring CP21 contract where:
• *--one or more buffers meet the criteria on WA Page 74 to be re-enrolled, and
• one or more buffers on the same contract do not meet the criteria on WA Page 74 to be re-enrolled, and
• the eligible and ineligible filter strips are unrelated (ie, filtering separate drainages)

Then…
only the eligible buffers may be re-enrolled as a CP21 practice

When the County Office does not know if a general signup will be held, or if the combined *--CP15A acreage and general CRP acreage offered by the producer in a general signup was not accepted, an offer to re-enroll the CP15A acreage can be accepted. This offer should not be approved until it is clear the producer will not be able to re-enroll the CP15A acreage and general CRP acreage in a new general CRP contract and the producer will be returning land surrounding the buffer to production.--*

B Program Policy (Continued)

CP21 Practice for CREP

Effective April 14, 2010, practice CP21 is eligible for enrollment in CREP. Practice implementation shall be accomplished following normal CP21 policy and NRCS technical standard guidance. CP21 enrollment is only authorized on cropland with the required cropping history.

Land may be enrolled in the CP21 practice under CREP only if it is along a stream within an 8-digit HUC that contains streams designated in accordance with the CREP Agreement.

Land along streams designated as eligible for CP22 enrollment under the CREP agreement or stream reaches that directly support salmon or steelhead shall not be enrolled in the CREP CP21 practice. These streams are fish bearing streams and the CP21 does not provide adequate salmonid habitat.
B  Program Policy (Continued)

- sinkholes and karst areas

- wetlands with water areas capable of reducing damages by sedimentation and associated pollutants that meet 1 of the following:
  - Permanently Flooded - water covers the land surface throughout the year in all years
  - Intermittently Exposed - surface water is present throughout the year except in years of extreme drought
  - Semipermanently Flooded - surface water is present throughout the growing season in most years
    
    **Note:** When surface water is absent, the water table is at or very near the land surface.

- Seasonally Flooded - surface water is present for extended periods of not less than 21 calendar days especially early in the growing season, but is absent by the end of the growing season in most years
    
    **Note:** When surface water is absent, the water table is at or very near the land surface.

- other permanent water bodies, such as lakes and ponds if both of the following are met:
  - provides water cover throughout the year in all years
  - flows from the water body off the farm.

**Exception:** A pond that is less than 5.0 acres and does not flow from the water body off the farm is not eligible to be enrolled in CP21.

**Note:** Water bodies that do not provide permanent water cover throughout the year in all years are not eligible.
National CRP Practices (Continued)

CP21  Filter Strips (Continued)

B  Program Policy (Continued)

- NRCS determines, based on a site visit, all of the following:
  - the cropland is suitable to be devoted to a filter strip
  - the filter strip is needed and feasible to solve the resource concern
  - the cropland is capable, after the filter strip is established, of substantially reducing pollutants in the nearby eligible stream or other water body.

CP21’s are not eligible to be used in conjunction with the following practices:

- CP22, because, if needed, a grass buffer is included in CP22
- CP23, because acreage devoted to CP23 may include up to a 3 to 1 ratio of uplands to ensure the functions and values of the cropped wetland are restored
- CP23A, because acreage devoted to CP23A may include up to a 4 to 1 ratio of uplands to ensure the functions and values of the cropped wetland are restored
- CP9, because acreage devoted to CP9 **must** include an adequate buffer to protect the shallow water area.

C  Size Requirements

The minimum acceptable width of a filter strip is 20 feet. A filter strip may be applied up to a maximum average width of 120 feet, if needed to accomplish the purpose of the practice.

Notes: The maximum average width of filter strips established for any purpose other than protection and enhancement of water quality, shall not exceed 120 feet.

Infeasible-to-farm provisions may apply to CP21.

When the minimum design specification for water quality exceeds 120 feet, the minimum design specification is the maximum average width that may be enrolled. NRCS **must** document the need for a minimum design specification in excess of 120 feet in writing.

Note: NRCS will determine the documentation needed to support an additional average width for water quality purposes consistent with FOTG standards. The documentation **must** be in the case file.
National CRP Practices (Continued)

CP21 Filter Strips (Continued)

C Size Requirements (Continued)

Example: Producer offers to enroll land to be devoted to a 120 foot wide filter strip to protect the adjacent eligible stream. Based on the soils, slope, and other site conditions, NRCS documents that to address the water quality resource problem and to function properly, the filter strip must be a minimum of 145 feet in width. Because the purpose of the filter strip is the protection and enhancement of water quality, the minimum of width 145 feet may be enrolled. The 145 foot minimum width is the maximum acreage that may be enrolled.

The filter strip shall begin at the top of the stream bank. In some cases there may be land that is adjacent to the stream that does not meet the eligibility criteria to be enrolled in CRP. This land shall not be enrolled in CRP. However, if the eligible land is enrolled in CRP as a filter strip, the ineligible land shall be included:

- in the area used as a filter strip
- in the conservation plan
- when determining the width of the filter strip.

This diagram provides an example of a filter strip adjacent to a stream that includes land not enrolled in CRP. The first 15 feet adjacent to the stream (starting at the top of the stream bank) does not meet the eligibility criteria to be enrolled in CRP.

The filter strip is 100 feet wide. Only the eligible land (85 feet width) is enrolled in CRP. The conservation plan is for the entire filter strip (100 feet). The producer is responsible for maintaining the entire practice (100 feet) according to the plan. Failure to maintain the entire 100 feet may result in CRP payment reductions or termination.
National CRP Practices (Continued)

CP21 Filter Strips (Continued)

D C/S Eligibility

To be eligible for C/S, this practice shall:

- be required by the approved conservation plan
- meet the cropland history criteria
- improve environmental benefits to an acceptable level
- reduce additional sediment or pollutants that are being delivered to areas identified in subparagraph B
- be maintained for the contract payment period
- prevent degradation of environmental benefits from recurring.

E C/S Policy

**F Practice Requirements**

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The seeded acreage shall not be harvested or grazed by domestic livestock for the life of CRP-1 unless grazing is incidental to the normal gleaning of the crop residue in the field according to subparagraph 720 A.*

- Limit C/S to the minimum minerals and seed necessary to establish an adequate cover to improve environmental benefits.

- Practice shall reduce nutrients, sediment, organic matter, pesticides, and other pollutants that are being delivered to the areas identified in subparagraph B.

- Chemicals used in performing the practice **must** be:
  - Federally, State, and locally registered
  - Applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
National CRP Practices (Continued)

CP21 Filter Strips

I Practice Maintenance

CP21 practices enrolled under CREP in western Washington may need to be maintained in order to function properly. This could require the periodic removal of excess growth in order to maintain the stand and remove nutrients. This activity will only be permitted if all the following conditions are met.

- After the grass is established in 1-2 years, no activity can occur during the primary nesting season.
- The approved conservation plan must include provisions for the removal and destruction of the vegetation, or be modified to add these provisions, before any activity begins.
- Participants must receive prior approval from FSA each time the material is to be removed.
- The cover may be mowed and left in place if that will not damage the stand. Otherwise the mowed material must be removed and destroyed.
- Neither the participant nor any other party may derive any form of benefit from the removed material. It may not be used for feed, bedding, donated, or in any way that would provide a financial or other benefit.
- Harvest and removal of the excess growth must be confirmed by a field visit by either FSA or the TSP. If this activity is conducted by FSA, standard measurement service fees must be paid by the participant.
CP21 Filter Strips (Continued)

F Practice Requirements (Continued)

• Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.

• The filter strip must be established and maintained according to the practice standards in FOTG.

• The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

H Environmental Concerns

Consideration of wildlife habitat, water quality and quantity, and other environmental concerns are to be evaluated in the planning and establishment of the protective measure.

I Practice Maintenance

This practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG.

C/S shall be refunded if either of the following applies:

• the producer destroys the practice during the contract period

• the cover fails to provide adequate protection of water quality during the practice lifespan, unless the failure is caused by circumstances beyond the producer’s control.
National CRP Practices (Continued)

CP21 Filter Strips (Continued)

J Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

K Technical Responsibility

NRCS shall have technical responsibility for this practice.

CP22 Riparian Buffer

A Purposes

The purposes of this practice are to:

- remove nutrients, sediment, organic matter, pesticides, and other pollutants from surface runoff and subsurface flow by deposition, absorption, plant uptake, denitrification, and other processes, and thereby reduce pollution and protect surface water and subsurface water quality while enhancing the ecosystem of the water body
- create shade to lower water temperature to improve habitat for aquatic organisms
- provide a source of detritus and large woody debris for aquatic organisms and habitat for wildlife.

B Program Policy

For cropland to be eligible to be enrolled in CRP to be devoted to CP22, all of the following must be met:

- COC determines both of the following:
  - all cropland eligibility requirements in subparagraph 181 A are met
CP22 Riparian Buffers

B Program Policy

**CP22 (Hedgerow) Practice for CREP**

Prior to April 14, 2010, all CREP CP22 practices were based on the NRCS 391, Riparian Buffer, standard. Effective April 14, 2010, CP22 (Hedgerow) is also authorized, which will be based on the Washington NRCS 422, Hedgerow Planting standard. CP22 (Hedgerow) practices will follow most normal CP22 provisions except minimum and maximum widths, eligible streams and planting rate.

The intent of the CP22 (Hedgerow) practice is to encourage the development of shade, leaf litter, bank stability and some filtering capacity on small streams where landowners may be hesitant to install wider riparian buffers.

Enrollment in the CP22 (Hedgerow) practice:

- is limited to CREP
- is permitted only on streams with a bank-full width of 15 feet or less

**Note:** In the case of incised channels, this practice may be installed where the stream width at the ordinary high water mark is 15 feet or less.

- shall be accomplished in accordance with Washington NRCS practice standard 422, Hedgerow Planting
- where the practice is determined needed and feasible based on water quality and wildlife habitat concerns
- shall be limited to an enrolled width of 15 feet plus a grass filter strip if needed
- may include a grass filter strip along the outside edge only if needed

**Note:** Per CP22 policy, the grass filter strip shall only be included if there are concentrated flows entering the hedgerow, and they shall be limited to the minimum width needed using the NRCS 393 standard. If the land is marginal pasture land, the filter strip width shall not exceed 20 feet.

- is permitted on land along streams designated under the CREP Agreement or within 10 stream miles upstream of a designated stream segment if the stream where the CP22 (Hedgerow) is placed eventually drains into the designated stream segment.

The beginning edge of the CP22 (Hedgerow) next to the stream shall be based on the criteria provided for the normal CP22 and the NRCS 391 standard.
National CRP Practices (Continued)

CP22 Riparian Buffer (Continued)

B Program Policy (Continued)

- the cropland offered is immediately adjacent and parallel to 1 of the following:
  - stream having perennial flow
  - seasonal stream

  **Important:** USGS maps shall **not** be solely used to determine seasonal streams. A seasonal stream is a stream that contains water for only part of the year but more than just during and/or after rainfall or snowmelt. Seasonal streams do **not** include:

  - wetlands of any type
  - land devoted to CP9
  - terrace channels
  - grass or sod waterways
  - gullies
  - narrow or wide wash
  - roadside ditches
  - well, spring, or seep
  - marsh or swamp
  - center pivot irrigation corners
  - irrigation canals
  - tail water recovery pit/system.

  **Note:** See paragraph 181 for more information about seasonal and perennial streams.

- sinkholes and karst areas

- wetlands with water areas capable of reducing damages by sedimentation and associated pollutants that meet 1 of the following:
  - Permanently Flooded - water covers the land surface throughout the year in all years
  - Intermittently Exposed - surface water is present throughout the year except in years of extreme drought
CP22  Riparian Buffer (Continued)

B Program Policy (Continued)

• Semipermanently Flooded - surface water is present throughout the growing season in most years

  Note: When surface water is absent, the water table is at or very near the land surface.

• Seasonally Flooded - surface water is present for extended periods of not less than 21 calendar days especially early in the growing season, but is absent by the end of the growing season in most years

  Note: When surface water is absent, the water table is at or very near the land surface.

• other permanent water bodies, such as lakes and ponds if both of the following are met:
  • provides water cover throughout the year in all years
  • flows from the water body off the farm.

  Exception: A pond that is less than 5.0 acres and does not flow from the water body off the farm is not eligible to be enrolled in CP22.

  Note: Water bodies that do not provide permanent water cover throughout the year in all years are not eligible.

• NRCS or TSP determines, based on a site visit, all of the following:
  • the cropland is suitable to be devoted to a riparian buffer
  • the riparian buffer is needed and feasible to solve the resource concern
  • the cropland is capable, after the riparian buffer is established, of meeting the purposes in subparagraph A
  • the riparian buffer is devoted (planted or natural regeneration) to trees.

  Note: Land that is not suitable for tree plantings, as determined by NRCS or TSP, is not eligible to be enrolled in CRP as a riparian buffer.
National CRP Practices (Continued)

CP22 Riparian Buffer (Continued)

B Program Policy (Continued)

For CREP eligibility, marginal pasture land must be along stream segments approved by the FSA State Committee and Washington Conservation Commission in accordance with the paragraph 151 and WA Exhibit 26.

Marginal pasture land is eligible for enrollment, including CREP enrollment, if it is:

- suitable for the establishment of a riparian buffer planted to trees, as determined by the technical agency
- suitable for use as pasture
- not classified as cropland according to handbook 3-CM.

Marginal pasture land is not defined by its productivity. Pastures do not have to be marginally productive to be eligible.

Marginal pasture land eligibility is not based on definitions that may be provided in other programs.
For marginal pastureland to be eligible to be enrolled in CRP to be devoted to CP22, all of the following must be met:

- COC determines both of the following:
  - all marginal pastureland eligibility requirements in subparagraphs C and D are met
  - the marginal pastureland offered is immediately adjacent and parallel to 1 of the following:
    - permanent water bodies, such as lakes and ponds that provides at least a seasonal flow of surface water from the water body off the farm

**Exception:** A pond that is less than 5.0 acres and does not provide at least a seasonal flow of surface water from the water body off the farm is not eligible to be enrolled in CP22.

**Note:** Water bodies that do not provide a permanent water cover throughout the year in all years are not eligible.

- stream having perennial flow
- seasonal stream
- sinkholes and karst area.

**Important:** USGS maps shall not be solely used to determine seasonal streams. A seasonal stream is a stream that contains water for only part of the year but more than just during and/or after rainfall or snowmelt. Seasonal streams do not include:

- wetlands of any type
- land devoted to CP9
- terrace channels
- grass or sod waterways
- gullies
- narrow or wide wash
- roadside ditches
- well, spring, or seep
- marsh or swamp
National CRP Practices (Continued)

CP22  Riparian Buffer (Continued)

B  Program Policy (Continued)

- center pivot irrigation corners
- irrigation canals
- tail water recovery pit/system.

Note: See paragraph 181 for more information about seasonal and perennial streams.

- NRCS TSP determines, based on a site visit, all of the following:
  - the marginal pastureland is suitable to be devoted to a riparian buffer devoted (planted or natural regeneration) to trees

  Note: Marginal pastureland to be devoted to wildlife habitat buffers should be enrolled as CP29.

  - the riparian buffer is needed and feasible to solve the resource concern
  - trees established on the land, if applicable, are not functioning as a riparian buffer
  - the marginal pastureland is capable, after the riparian buffer is established, of meeting the purposes in subparagraph A

Important: Marginal pastureland must be devoted (planted or natural regeneration) to trees. If trees are already established on the land and functioning as a riparian buffer, the land is ineligible for CRP. See paragraph 181.

- the riparian buffer is devoted (planted or natural regeneration) to trees.

Note: Land that is not suitable for tree plantings, as determined by NRCS or TSP, is not eligible to be enrolled in CRP as a riparian buffer.

CP22’s are not eligible to be used in conjunction with the following practices:

- CP21, because, if needed, a grass buffer is included in CP22
- CP23, because acreage devoted to CP23 may include up to a 3 to 1 ratio of uplands to ensure that the functions and values of the cropped wetland are restored
B Program Policy (Continued)

If trees are already established and functioning as a riparian buffer, the land is not eligible for the continuous CRP or CREP. If existing trees do not meet NRCS stocking levels, and the land is not functioning as a riparian buffer, the land is eligible for the continuous CRP or CREP, provided all other eligibility requirements are met.

For CREP in western Washington, land shall be considered to be functioning as a buffer if all the following apply:

- the existing stand has at least the density described on WA Page 94 of this exhibit
- at least one shrub component exists
- where the site will support conifers, at least 30 percent of the existing stand is conifers.
CP22 Riparian Buffers (Continued)

C Size Requirements

**CP22 (Hedgerow) Practice for CREP**

See paragraph B for additional policy on the CP22 (Hedgerow) practice authorized for CREP.

Enrollment in the CP22 (Hedgerow) practice:

- shall be limited to an enrolled width of 15 feet plus a grass filter strip if needed
- may include a grass filter strip along the outside edge only if needed

**Note:** Per CP22 policy, the grass filter strip shall only be included if there are concentrated flows entering the hedgerow, and they shall be limited to the minimum width needed using the NRCS 393 standard. If the land is marginal pasture land, the filter strip width shall never exceed 20 feet.
CP22 Riparian Buffer (Continued)

B Program Policy (Continued)

- CP23A, because acreage devoted to CP23A may include up to a 4 to 1 ratio of uplands to ensure the functions and values of the cropped wetland are restored

- CP9, because acreage devoted to CP9 must include an adequate buffer to protect the shallow water area.

This practice is not applicable to CRP offers accepted before signup 14.

C Size Requirements

A riparian buffer shall not be less than 35 feet in width. The maximum width of a riparian buffer is the lesser of 100 feet or 30 percent of the geomorphic floodplain. An area of native grasses and forbs may be added, if otherwise eligible, only for concentrated flow conditions dependent on the site.

Excessive sheet-rill and concentrated flow will be controlled in areas immediately adjacent and up-gradient of the buffer. This area should be the minimum necessary to control excessive sheet-rill erosion and/or concentrated flow.

A riparian buffer may be applied up to a maximum average width of 180 feet, if needed to accomplish the purpose of the practice.

Notes: The maximum average width of riparian buffers established for any purpose other than protection and enhancement of water quality shall not exceed 180 feet.

Infeasible-to-farm provisions may apply to riparian buffers on cropland.

When the minimum design specification for water quality exceeds 180 feet, the minimum design specification is the maximum average width that may be enrolled. NRCS or TSP must document the need for a minimum design specification in excess of 180 feet in writing.

Note: NRCS will determine the documentation needed to support an additional average width for water quality purposes consistent with FOTG standards. The documentation must be in the case file.

Example: Producer offers to enroll cropland to be devoted to a 180 foot wide riparian buffer to protect the adjacent eligible stream. Based on the soils, slope, and other site conditions, NRCS documents that to address the water quality resource problem and to function properly, the riparian buffer needs to be a minimum of 200 feet in width. Because the purpose of the riparian buffer is the protection and enhancement of water quality, the minimum width of 200 feet may be enrolled. The 200 foot minimum width is the maximum acreage that may be enrolled.
National CRP Practices (Continued)

CP22 Riparian Buffer (Continued)

C Size Requirements (Continued)

The riparian buffer shall begin at the top of the stream bank. In some cases there may be land that is adjacent to the stream that does not meet the eligibility criteria to be enrolled in CRP. **This land shall not be enrolled in CRP.** However, if the eligible land is enrolled in CRP as a riparian buffer, the ineligible land **shall be** included:

- in the area used as a riparian buffer
- in the conservation plan
- when determining the width of the riparian buffer.

This diagram provides an example of a riparian buffer adjacent to a stream that includes land not enrolled in CRP. The first 15 feet adjacent to the stream (starting at the top of the stream bank) does **not** meet the eligibility criteria to be enrolled in CRP.

![Diagram of riparian buffer](image)

The riparian buffer is 100 feet wide. Only the eligible land (85 feet width) is enrolled in CRP. The conservation plan is for the entire riparian buffer (100 feet). The producer is responsible for maintaining the entire practice (100 feet) according to the plan. Failure to maintain the entire 100 feet may result in CRP payment reductions or termination.
National CRP Practices (Continued)

CP22  Riparian Buffer (Continued)

C  Size Requirements (Continued)

The riparian forest buffer shall be positioned appropriately and designed to achieve sufficient width, length, and vertical structural-density to accomplish the intended purposes.

Dominant vegetation will consist of naturally regenerated or seeded/planted trees and shrubs suited to the soil and hydrology of the site to achieve the intended purposes.

Excessive sheet-rill and concentrated flow will be controlled. Concentrated flow and/or excessive sheet flow may be controlled through the use of a grass strip. The width of the strip should be the minimum necessary to achieve the intended purposes.
National CRP Practices (Continued)

CP22 Riparian Buffer (Continued)

D C/S Eligibility

To be eligible for C/S, this practice shall:

- be required by the approved conservation plan
- be implemented on land that meets the cropland history criteria or marginal pastureland
- improve environmental benefits to less than the soil loss tolerance
- reduce additional nutrients, sediment, organic matter, or other pollutants that are being delivered to areas identified in subparagraph B
- be maintained for the contract payment period
- prevent degradation of environmental benefits from recurring.

Note: Use tree species that are native and noninvasive. Substitution with improved and locally accepted cultivars is permitted. Use high quality and adapted plant material.

See subparagraphs E and H for eligible C/S when producer elects natural regeneration.
National CRP Practices (Continued)

CP22 Riparian Buffer (Continued)

E C/S Policy

COC’s are authorized to approve cost sharing on **water gaps, bridges, or other livestock crossing facilities** on small streams provided the following STC policy guidelines are followed. COC minutes must reflect that the following criteria were reviewed and met.

Water gap widths should be no more than:
- 40 feet when used by an average of 100 animals
- 60 feet when used by 100-200 animals
- 80 feet when used by more than 200 animals.

Water gaps, bridges, or other livestock crossing facilities should be limited to streams with a mean annual stream flow of 250 cubic feet per second (CFS) or less. County Offices may access the website [http://water.usgs.gov/nwis/annual](http://water.usgs.gov/nwis/annual) to determine if a stream meets the 250 CFS criteria. If the stream cannot be found at this website, other data must be used to determine the actual or estimated mean annual stream flow. If the stream exceeds 250 CFS, the proposal must be submitted to the STC for approval.

To use the website [http://water.usgs.gov/nwis/annual](http://water.usgs.gov/nwis/annual):

- Under Site Location, place a check the box for State/Territory. Click Submit.
- On the next screen, under Select Sites, scroll down to Washington and select it. Scroll to the bottom and under Choose Output Format, leave the radio button for Table of sites sorted by “___” grouped by “___” highlighted. In the first drop down menu, change the entry from Site Number to Site Name. In the second drop down menu, select County.
- Click on Submit.
- All Washington sites with annual stream flow data on this website will be listed on the following screen, grouped by county, in alphabetical order. To view data on a particular site, click on the Site Number.
- Click the radio button to the left of the Parameter Name, “Discharge, cubic feet per second. Click Submit.
- From the table on the following screen, determine a simple average of the CFS for the years of data available.

Water gaps, bridges, or other livestock crossing facilities must be:
- cost effective
- a workable method of providing livestock access and/or water within the participant’s livestock operation, as determined by COC.

**Note:** For CREP, water gaps, bridges and other livestock crossing facilities must also be constructed in accordance with the Biological Opinion guidance provided in WA Exhibit 30.
National CRP Practices (Continued)

CP22 Riparian Buffer (Continued)

E C/S Policy (Continued)

Cost sharing for tree shelters, netting, plastic tubes or other animal damage control devices is only authorized under this practice when both the following apply:

- the designated technical agency determines that the devices are needed for successful establishment of the trees/shrubs on the specific site

- the device required, rather than over-planting or another type of device, is the most cost-effective method of stand establishment.

Note: Cost sharing under this policy is authorized for hardwoods, conifers and shrubs.
National CRP Practices (Continued)

CP22 Riparian Buffer (Continued)

National CRP Practices (Continued)

CP22 Riparian Buffer (Continued)

F Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The buffer shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Limit C/S to the minimum materials necessary to establish an adequate cover to improve environmental benefits.
- Acreage shall reduce nutrients, sediment, organic matter, pesticides, and other pollutants that are being delivered to the areas identified in subparagraph B.
- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled.
- The riparian buffer must be established and maintained according to the practice standards in FOTG.
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1.

Exceptions: See paragraph 426 for exceptions to 12-month planting requirement.

See subparagraph H for natural regeneration.
National CRP Practices (Continued)

CP22 Riparian Buffers (Continued)

F Practice Requirements

**CP22 (Hedgerow) Practice for CREP**

See paragraph B for policy on the CP22 (Hedgerow) practice authorized for CREP.

The maximum tree/shrub stocking rate is 1,162 stems per acre. The mandatory width for these plantings is 15 feet wide at hedgerow maturity. This does not have to be attained at the time of planting. From the example below, a two-row hedgerow design will grow to attain a 15-foot row width in a short time period (3-5 years).

Hedgerows are linear: 43,560 square feet (1 acre) ÷ 15 feet = 2,904 feet in length.

Formula to attain stems/per acre: 2,904 ÷ tree spacing X number of rows.

**Example:** A two-row hedgerow planted at a five foot spacing within the rows, with six foot between the rows, would require 1,162 cuttings/seedlings per acre (2904 ÷ 5 X 2 = 1,162). Lateral growth would attain a 15 foot hedgerow width in 3-5 years. This planting density would also suppress weeds if the site is prepared properly and good weed control is done during the first two years after planting.

Determining the number of rows and density of these special hedgerow plantings is an onsite decision with the objective to attain a diverse 15 foot wide mature hedgerow for the intended purpose(s). However, in all cases cost sharing shall be limited to a maximum of 1,162 stems per acre.

The woody vegetation planted in the hedgerow shall be limited to native species. Tree/shrub plantings shall be limited to 2-4 species of shrub and small tree species, adapted to the site.

**CP22 (Riparian Buffer) Stocking Rates for CREP**

The stocking rate and species mix at maturity for a functioning buffer should resemble that of a similar, undisturbed site. Consideration may need to be given to the stocking level and species the site will currently support in situations such as an incised stream channel where the water table outside the stream channel has been significantly lowered. Other site specific considerations may need to be accounted for that would impact stocking level or species mix. In general, the stocking rate for a functioning buffer should be a combined 300-400 stems per acre for all woody species at the time of stand certification.
Exhibit 11

National CRP Practices (Continued)

CP22 Riparian Buffer (Continued)

F Practice Requirements (Continued)

For western Washington, the stand should also include at least one shrub species and, where the site will support conifers, at least 30 percent conifers.

Planting rates should generally be increased to take into account normal mortality of approximately 10-20 percent, depending on the severity of the site. Plantings that take into account the required stocking rate plus normal mortality have a better chance of achieving an acceptable stand at certification. Planting rates should not be used to take the place of good site preparation or animal control. Limiting the original planting to the required stocking level only and requiring inter-planting when normal mortality occurs is often less likely to succeed and can result in increased costs.

Examples: The technical agency determines that a proposed CREP site should be stocked at 350 trees per acre. Normal mortality for similar plantings is approximately 15 percent. Total plantings are approved at 403 stems per acre (350 + 20 percent).

The technical agency determines that a proposed CCRP site should be stocked at 300 trees per acre. Normal mortality for similar plantings is approximately 20 percent. The site is planted at 360 stems per acre (300 + 20%). The technical agency eventually reports that only 280 stems per acre are established. Although 300 stems per acre is the targeted stocking rate, the COC in consultation with the technical agency, determines that 280 stems per acre will meet the purposes of the practice. The COC determines that the additional benefits that will be obtained by inter-planting an additional 20 stems do not justify the added costs and difficulties associated with inter-planting.

Notes: If tree/shrub mortality is significantly greater than normal, cost sharing to replant may be approved if all eligibility criteria are met. PIP payments are not authorized for replants, but for CREP, these funds can be made up with State maintenance funds in some cases.

H Natural Regeneration

*--Natural regeneration is not an authorized practice in Washington unless a contract specific waiver is obtained from the State Office in advance.--*
Exhibit 11

National CRP Practices (Continued)

CP22 Riparian Buffer (Continued)

H Natural Regeneration

Producers may elect to allow natural regeneration of the riparian buffer if all of the following are met:

- NRCS or TSP determines both of the following:
  - an adequate seed source of approved tree, shrub, and grass species is present in the soil at the site

  **Note:** Grass is an acceptable cover in the riparian buffer only if determined needed to control concentrated flow and an excessive sheet flow.

- under normal conditions, the **appropriate cover** will be established within 2 years of CRP-1 effective date

- erosion and runoff will be controlled during the establishment period

- weeds, including noxious weeds, and other nonapproved plant species will be controlled during the establishment period

- the conservation plan signed by the producer requires all of the following:
  - **no** C/S shall be paid for the practice

**Exceptions:** See subparagraph E.

- the producer will plant the approved cover at no cost to FSA or CCC according to a revised conservation plan if the riparian buffer is not established through natural regeneration within 2 years of CRP-1 effective date

- conservation practice code 647, Early Successional Habitat Development/Management, is used to identify natural regeneration

- NRCS or TSP shall spot check the site at the end of the second year to determine whether the riparian buffer is established and meets the standards and specifications for NRCS conservation practice code 391A, Riparian Forest Buffer

**Note:** FSA must immediately notify COC and the participant:

- of the result of the spot check

- that the participant must plant the approved cover with no C/S according to a revised conservation plan, if applicable.
National CRP Practices (Continued)

CP22 Riparian Buffer (Continued)

H Natural Regeneration (Continued)

COC shall not approve CRP-1 until all of the preceding requirements are met. COC shall ensure the producer is fully informed that:

- no C/S will be paid for natural regeneration

**Exceptions:** See subparagraph E.

- the producer will be required to plant the approved cover with no C/S if the approved cover is not established within 2-years of CRP-1 effective date.

I Environmental Concerns

Consideration of wildlife habitat, water quality and quantity, and other environmental concerns are to be evaluated in the planning and establishment of the protective measure.

J Practice Maintenance

This practice shall be maintained without additional C/S for the life of the practice according to the practice standards in FOTG.

C/S shall be refunded if either of the following applies:

- the producer destroys the practice during the contract period
- the cover fails to provide adequate protection of water quality during the practice lifespan, unless the failure is caused by circumstances beyond the producer’s control.

K Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

L Technical Responsibility

Technical responsibility for this practice shall be assigned to FS and NRCS, or TSP.
National CRP Practices (Continued)

CP23 Wetland Restoration

B Program Policy

CP23 Practice for CREP

Effective April 14, 2010, practice CP23 is eligible for enrollment in CREP. Practice implementation shall be accomplished following normal CP23 policy and applicable NRCS technical standards. CP23 enrollment is only authorized on cropland with the required cropping history.

The intent of the CP23 practice under CREP is to restore wetlands that are hydrologically connected to streams designated as eligible for CP22 enrollment under the CREP agreement. Only wetlands hydrologically connected to streams that meet this criterion may be enrolled in a CREP CP23. Hydrologically connected means the wetland moisture comes from either the designated stream, such as during period of high flow, or from a ground water source connected to the stream.

C Total Eligible Cropland Limit

In general the CP23 practice is utilized on cropland that contains a wetland and surrounding buffer. Both the wetland and buffer acreage must have the required cropping history. If the wetland acreage does not have the cropping history, but the buffer acreage does, the buffer acreage alone can be enrolled in the CP23. Only the buffer acreage would receive any payment. The entire wetland and buffer acreage must:

- be covered by the conservation plan
- be maintained and idled according to normal CRP provisions.
National CRP Practices (Continued)

CP23 Wetland Restoration

A Purpose

The purpose of this practice is to restore the functions and values of wetland ecosystems that have been devoted to agricultural use. The level of restoration of the wetland ecosystem shall be determined by the producer in consultation with NRCS or TSP.

B Program Policy

Apply this practice to eligible wetlands and associated acreage that are suitably located and adapted to the restoration of wetland functions and values. The restoration of wetland hydrology is only required to the extent specified by the producer.

Note: Cottonwoods may be planted to enhance the viability of other hardwood trees (oaks, etc.). Selection of cottonwood as a component must be silviculturally and ecologically appropriate for the long-term health and production of the stand. Hydrologic and soil characteristics must be appropriate for the planting of cottonwood species.

C Total Eligible Cropland Limit

Total eligible cropland for wetland restorations is limited to cropland:

- according to paragraph 151
- within the 100-year floodplain of a permanent river or stream
- that includes a minimum of 51 percent hydric soils for the acreage offered (nonbuffer areas).

Note: An offer that includes a buffer outside the 100-year floodplain may be enrolled if otherwise eligible, needed, and feasible for the practice.

D Size Requirements

The amount of adjacent upland acreage to be enrolled shall be determined by NRCS. The amount of adjacent upland acres:

- is limited to the minimum number of acres required to provide a protective buffer to the cropped wetland and to enhance wildlife habitat
- may be less than the 3 to 1 ratio
- shall not exceed the 3 to 1 ratio.
National CRP Practices (Continued)

CP23  Wetland Restoration (Continued)

E  C/S Eligibility

To be eligible for C/S, this practice shall:

- be included in the approved conservation plan
- be maintained for the life of CRP-1
- restore the functional capability and values of the wetland ecosystem to a level determined by the participant in consultation with NRCS or TSP, including the following:
  - preventing degradation of the wetland area and surrounding upland area from recurring
  - increasing sediment trapping efficiencies
  - improving surface and ground water quality
  - preventing excessive erosion from recurring
  - providing waterfowl and other wildlife habitat
  - reducing flood flows.

F  C/S Policy

The following provides C/S policies for this practice.

<table>
<thead>
<tr>
<th>IF the component is...</th>

</table>
| temporary cover        | • required in the practice specifications  
                           • needed until the required seeds or plant stock is available  
                           • needed because the normal planting period for the permanent cover crop has passed  
                           • that a soil condition, like chemical residue, will not allow establishment of the permanent cover immediately | authorized. |
| seeding firebreaks, fuelbreaks, or firelanes | to establish and maintain the cover according to State requirements |  |
| herbicides, pesticides, and insecticides | specified as necessary in the approved conservation plan to establish the cover, but not for use as part of the maintenance of the cover |  |
| mineral or nutrient | substantiated as needed by COC to establish the approved cover |  |
| tree shelters, netting, plastic tubes, or other animal damage control devices | approved by STC for the area and substantiated as needed by designated technician and COC to prevent damage from wildlife browsing | authorized not to exceed an average cost, as determined by STC. |

Note: STC must designate areas where use of such measures is warranted and cost-effective to protect seedlings. See paragraphs 31 and 491.
Cost sharing for tree shelters, netting, plastic tubes or other animal damage control devices is only authorized under this practice when the both the following apply:

- the designated technical agency determines that the devices are needed for successful establishment of the trees/shrubs on the specific site
- the device required, rather than over-planting or another type of device, is the most cost-effective method of stand establishment.

**Note:** Cost sharing under this policy is authorized for hardwoods, conifers and shrubs.

G Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Limit C/S to the minimum work and materials necessary to develop or restore the wetland hydrology, and establish an adequate cover to improve environmental benefits.
- The wetland ecosystem shall be restored to the extent identified according to subparagraph B.

Note: The level of restoration shall be determined by the producer in consultation with NRCS or TSP.

- Approval must be obtained from the State Forester and State Wildlife Agency certifying that planting of cottonwood as a nurse crop is appropriate for the State.
- Planting of cottonwood trees may only be for nurse trees in a pattern appropriate for that purpose.
National CRP Practices (Continued)

CP23 Wetland Restoration (Continued)

G Practice Requirements (Continued)

- Chemicals used in establishing the practice must be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.
- The practice must be established and maintained according to the practice standards in FOTG.
- The hydrology of the wetland must be maintained according to the operation and maintenance requirements for the practice standard.
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

H Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

I Environmental Concerns

Consideration of water quality, wildlife, and other environmental concerns are to be evaluated in the planning and establishment of this practice.
National CRP Practices (Continued)

CP23  Wetland Restoration (Continued)

J  Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG.

Tree thinning or harvest of cottonwood species may be permitted after year 9 of the CRP contract appropriate for the stand as determined by the State Forester. C/S for tree thinning is authorized.

C/S shall be refunded if any of the following apply:

- producer destroys the practice during the life of CRP-1
- producer fails to maintain the cover during the life of CRP-1
- the cover fails to provide adequate protection of water quality during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.

K  Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.
CP23 Wetland Restoration (Continued)

L Incentive to Restore Hydrology for CRP-1’s Approved Before November 3, 2008

A 1-time WRI payment equal to 25 percent of the cost of restoring the hydrology of the site is available to encourage the restoration of cropped wetlands only for CRP-1’s approved before November 3, 2008. WRI payment shall be:

- a separate payment from any applicable C/S
- issued according to 1-FI using program code “XXCRPWRI”
- issued upon certification of completion of practice
- equal to 25 percent of the cost of restoring the hydrology of the site.

Exception: WRI is not authorized for re-enrolled practices under continuous or FWP.

Note: Do not include the cost associated with establishing any associated acreage when calculating the 1-time WRI payment.

Producers do not have to receive C/S to be eligible for the 1-time WRI payment.

M Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP. For areas to be established to trees, FS or State Forestry Agency shall have technical responsibility. The State Forester has responsibility for determining if selection of a cottonwood species component is silviculturally and ecologically appropriate.
National CRP Practices (Continued)

CP23A Wetland Restoration, Non-Floodplain

B Program Policy

CP23A Practice for CREP

Effective April 23, 2010, practice CP23A is eligible for enrollment in CREP. Practice implementation shall be accomplished following normal CP23A policy and applicable NRCS technical standards. CP23 enrollment is only authorized on cropland with the required cropping history.

The intent of the CP23A practice under CREP is to restore wetlands that are hydrologically connected to streams designated as eligible for CP22 enrollment under the CREP agreement. Only wetlands hydrologically connected to streams that meet this criterion may be enrolled in a CREP CP23A. Hydrologically connected means the wetland moisture comes from either the designated stream, such as during period of high flow, or from a ground water source connected to the stream.

In general the CP23A practice is utilized on cropland that contains a wetland and surrounding buffer. Both the wetland and buffer acreage must have the required cropping history. If the wetland acreage, or a portion there of, does not have the cropping history, but the buffer acreage does, the buffer acreage alone can be enrolled in the CP23A. Only the buffer acreage would receive any payment. The entire wetland and buffer acreage must:

- be covered by the conservation plan
- be maintained and idled according to general CRP and specific CP23A provisions.
National CRP Practices (Continued)

CP23A  Wetland Restoration, Non-Floodplain

A  Purpose

The purpose of this practice is to restore the functions and values of wetland ecosystems that have been devoted to agricultural use. The level of restoration of the wetland ecosystem shall be determined by the producer in consultation with NRCS or TSP.

B  Program Policy

Apply this practice to eligible wetlands and associated acreage that are any of the following:

- located outside the 100-year floodplain
- playa lakes.

The land must be suitable and adapted to the restoration of wetland functions and values. The restoration of wetland hydrology is only required to the extent specified by the producer.

Note: Cottonwoods may be planted to enhance the viability of other hardwood trees (oaks, etc.). Selection of cottonwood as a component must be silviculturally and ecologically appropriate for the long-term health and production of the stand. Hydrologic and soil characteristics must be appropriate for the planting of cottonwood species.

C  Size Requirements

The amount of adjacent upland acreage to be enrolled shall be determined by NRCS. The amount of adjacent upland acres:

- is limited to the minimum number of acres required to provide a protective buffer to the cropped wetland and to enhance wildlife habitat

- may be less than the 4 to 1 ratio

- shall not exceed the 4 to 1 ratio.
E  C/S Eligibility

To be eligible for C/S, this practice shall:

• be included in the approved conservation plan

• be maintained for the life of CRP-1

• restore the functional capability and values of the wetland ecosystem to a level determined by the participant in consultation with NRCS or TSP, including the following:
  
  • preventing degradation of the wetland area and surrounding upland area from recurring
  • increasing sediment trapping efficiencies
  • improving surface and ground water quality
  • preventing excessive erosion from recurring
  • providing waterfowl and other wildlife habitat
  • reducing flood flows.

F  C/S Policy

The following provides C/S policies for this practice.

</tbody>
</table>

G  Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.

- Limit C/S to the minimum work and materials necessary to develop or restore the wetland hydrology, and establish an adequate cover to improve environmental benefits.

- The wetland ecosystem shall be restored to the extent identified according to subparagraph B.

  **Note:** The level of restoration shall be determined by the producer in consultation with NRCS or TSP.

- Approval must be obtained from the State Forester and State Wildlife Agency certifying that planting of cottonwood as a nurse crop is appropriate for the State.

- Planting for cottonwood trees may only be for nurse trees in a pattern appropriate for that purpose.
National CRP Practices (Continued)

CP23A  Wetland Restoration, Non-Floodplain (Continued)

G  Practice Requirements (Continued)

• Chemicals used in establishing the practice must be:
  • Federally, State, and locally registered
  • applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

• Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.

• The practice must be established and maintained according to the practice standards in FOTG.

• The hydrology of the wetland must be maintained according to the operation and maintenance requirements for the practice standard.

• The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

H  Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

I  Environmental Concerns

Consideration of water quality, wildlife, and other environmental concerns are to be evaluated in the planning and establishment of this practice.

J  Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG.

Tree thinning or harvest of cottonwood species may be permitted after year 9 of the CRP contract appropriate for the stand as determined by the State Forester. C/S for tree thinning is authorized.
CP23A  Wetland Restoration, Non-Floodplain (Continued)

J  Practice Maintenance (Continued)

C/S shall be refunded if any of the following apply:

- producer destroys the practice during the life of CRP-1
- producer fails to maintain the cover during the life of CRP-1
- the cover fails to provide adequate protection of water quality during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.

K  Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

L  Incentive to Restore Hydrology for CRP-1’s Approved Before November 3, 2008

A one-time WRI payment equal to 25 percent of the cost of restoring the hydrology of the site is available to encourage the restoration of cropped wetlands only for CRP-1’s approved before November 3, 2008. WRI payment shall be:

- a separate payment from any applicable C/S
- issued according to 1-FI using program code “XXCRPWRI”
- issued upon certification of completion of practice
- equal to 25 percent of the cost of restoring the hydrology of the site.

**Note:** Do not include the cost associated with establishing any associated acreage when calculating the one-time WRI payment.

Producers do not have to receive C/S to be eligible for the one-time WRI payment.

M  Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP. For areas to be established to trees, FS or State Forestry Agency shall have technical responsibility. The State Forester has responsibility for determining if selection of a cottonwood species component is silviculturally and ecologically appropriate.
CP24 Establishment of Permanent Vegetative Cover as Cross Wind Trap Strips

A Purpose

The purpose of this practice is to establish 1 or more strips, varying in size, of permanent vegetative cover resistant to wind erosion perpendicular to the prevailing wind direction on eligible cropland with a wind erosion EI greater than or equal to 4 (EI ≥ 4) that will:

- reduce on-farm wind erosion
- trap wind-borne sediments and sediment borne contaminants
- help protect public health and safety.

B Program Policy

Apply this practice to permanent vegetative cover for cross wind trap strips on eligible cropland perpendicular to the prevailing wind direction.

This practice shall:

- consist of at least 2 strips each that meet the size requirements in subparagraph D
- not exceed, in aggregate, 10 percent of the total field acreage
- only be devoted to eligible cropland with a wind erosion EI greater than or equal to 4 (EI ≥ 4).

C Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the CRP-1 period
- be required by the approved conservation plan
- not exceed the size requirements in subparagraph D
- only be devoted to eligible cropland with a wind erosion EI greater than or equal to 4 (EI ≥ 4).
CP24 Establishment of Permanent Vegetative Cover as Cross Wind Trap Strips (Continued)

D Size Requirements

Cross wind trap strips shall:

- be a minimum of 15 feet in width
- not exceed 25 feet in width
- consist of permanent vegetation that is a minimum of 12 inches in height
- not exceed, in aggregate, 10 percent of the total acreage in the field.

E C/S Policy

</tbody>
</table>

F Requirements

The following are requirements for this practice.

- Limit C/S to the minimum minerals and seed necessary to establish adequate cover to improve environmental benefits.

- The acreage seeded shall not be harvested or grazed by domestic livestock for the life of CRP-1.

- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.

- Designed width of strips must be maintained for the life of CRP-1.

- Deposition of soil materials shall be removed when the accumulated sediment in the cross wind trap strip exceeds 6 inches in depth.

Note: Cover shall be reseeded, at producer’s expense, after accumulated sediment is removed.
F Requirements (Continued)

- Vegetative cover height of at least 12 inches shall be maintained for the life of CRP-1.
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

H Environmental Concerns

Consider wildlife concerns when making determinations about seed varieties and other practice specifications.

I Practice Maintenance

The practice shall be maintained without additional C/S for the CRP-1 period. C/S shall be refunded if:

- producer destroys the cover during the CRP-1 period
- width of the strips are not maintained
- minimum height of vegetative cover is not maintained
- sediment deposition is not removed, when required, and acreage reseeded
- cover fails to provide enhancement of environmental benefits during the practice lifespan unless caused by circumstances beyond the producer’s control.

J Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.
National CRP Practices (Continued)

CP24 Establishment of Permanent Vegetative Cover as Cross Wind Trap Strips (Continued)

K Program Development

County practice shall include the practice lifespan. County programs shall also provide details of any requirements, such as seedbed preparation, seeding dates, eligible seed, etc., that are conditions for C/S for the practice. STC may establish these requirements.

L Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
CP25 Rare and Declining Habitat

A Purpose

See WA Exhibit 4, pages 24-37, for practice specifications for the following CP25 practices approved for Washington:

- Native Shrub and Grassland Steppe
- Palouse Prairie
National CRP Practices (Continued)

CP25  Rare and Declining Habitat

A  Purpose

The purpose of this practice is to restore the functions and values of critically endangered, endangered, and threatened habitats. The extent of the restoration is determined by the specifications developed at the State level.

Note: All State specifications must be reviewed and approved by DAFP.

Habitats eligible for restoration include:

Note: See subparagraph L.

- Other specifically identified habitats within a State with documented losses of greater than 70 percent since European settlement.

Notes: Documentation of 70 percent or greater loss must be provided for all habitats not listed in subparagraph L.

All habitats not listed in subparagraph L must be approved by DAFP.

B  Program Policy

Apply this practice to eligible lands where a specified habitat can be restored and maintained, as determined by NRCS technical specifications, in a cost-effective manner through enrollment in CRP.

Notes: NRCS technical restoration specifications shall be developed in consultation with the State Technical Committee.

Technical expertise from other Federal and State agencies and/or private organizations is encouraged to assist with habitat establishment and long-term management of the restored habitats.

State NRCS Offices shall submit all specifications developed to NRCS National Headquarters for review. To be an eligible practice, specifications must be approved by DAFP before implementation.
National CRP Practices (Continued)

CP25  Rare and Declining Habitat (Continued)

C  Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the CRP-1 period
- be required by the approved conservation plan
- be implemented on eligible lands where the rare and declining habitat can be restored in a cost-effective manner through enrollment in CRP
- restore the native vegetative components and functions, and values of rare and declining wildlife habitats to a level determined by the specifications developed at the State level and approved by DAFP.

Note:  C/S shall not exceed 50 percent of the price at which the land placed in CRP could be sold for use as farmland at the time at which CRP-1 is signed by the producer.  See paragraph 491.
**D C/S Policy**

National CRP Practices (Continued)

CP25 Rare and Declining Habitat (Continued)

E Requirements

States shall develop detailed:

- specifications to accomplish the successful restoration of the critically endangered, endangered, and threatened habitats within the State
- maps of the area where the approved practice specifications will be implemented.

All specifications must be reviewed and approved by DAFP.

The following are requirements for this practice.

- The approved critically endangered, endangered, or threatened habitat shall be restored according to specifications developed by the State and approved by DAFP.
- Limit C/S to the minimum minerals and seed necessary to restore the rare and declining habitat vegetative characteristics, as provided by the State specific restoration specifications.
- Acreage must be maintained according to the conservation plan for the life of CRP-1.
- The acreage enrolled shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- The size of the acreage established should be of sufficient size and location on the landscape as to meet the purpose of the practice.
- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
  - Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.
  - The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.
National CRP Practices (Continued)

CP25  Rare and Declining Habitat (Continued)

F  Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

G  Environmental Concerns

Restoration of critically endangered, endangered, and threatened habitats is the primary consideration when making determinations about types of plantings, spacing, and other practice specifications. Consider preserving and improving the surrounding environment when making determinations about seed varieties and other practice specifications.

H  Practice Maintenance

The practice shall be maintained without additional C/S for the CRP-1 period. C/S shall be refunded if:

- producer destroys the cover during the CRP-1 period
- restoration fails to meet the goals of the practice during the practice lifespan, unless caused by circumstances beyond the producer’s control
- cover fails, unless caused by circumstances beyond the producer’s control.

I  Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

J  Program Development

State-specific specifications shall be developed for this practice and must be reviewed and approved by DAFP.

County Offices are not authorized to modify established specifications or develop county practices for CP25.
National CRP Practices (Continued)

CP25 Rare and Declining Habitat (Continued)

K Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.

L Approved Critically Endangered and Endangered Ecosystems

Critically Endangered (>98 Percent Decline) Ecosystems

Old-growth and other virgin stands in the eastern deciduous forest biome.

Spruce-fir (*Picea rubens-Abies fraseri*) forest in the southern Appalachians.

Red pine (*Pinus resinosa*) and white pine (*Pinus strobus*) forests (mature and old-growth) in Michigan.

Longleaf pine (*Pinus palustris*) forests and savannas in the southeastern coastal plain.

Slash pine (*Pinus elliottii*) rockland habitat in South Florida.

Loblolly pine-shortleaf pine (*Pinus taeda-Pinus echinata*) hardwood forests in the West Gulf Coastal Plain.

*Arundinaria gigantea* canebrakes in the Southeast.

Tallgrass prairie east of the Missouri River and on mesic sites across range.

Bluegrass savanna-woodland and prairies in Kentucky.

Black Belt prairies in Alabama and Mississippi and in the Jackson Prairie in Mississippi.

Ungrazed dry prairie in Florida.

Oak (*Quercus* spp.) savanna in the Midwest.

Wet and mesic coastal prairies in Louisiana.

Lakeplain wet prairie in Michigan.
National CRP Practices (Continued)

CP25  Rare and Declining Habitat (Continued)

L  Approved Critically Endangered and Endangered Ecosystems (Continued)

Sedge (*Carex* spp. and others) meadows in Wisconsin.

Hempstead Plains grasslands on Long Island.

Lake sand beaches in Vermont.

Serpentine barrens, maritime heathland, and pitch pine (*Pinus rigida*)-heath barrens in New York.

Prairies (all types) and oak savannas in the Willamette Valley and in the foothills of the Coast Range, Oregon.

Palouse prairie (Idaho, Oregon, and Washington and in similar communities in Montana).

Native grasslands (all types) in California.

Alkali sink scrub in southern California.

Coastal strand in southern California.

Ungrazed sagebrush steppe in the Intermountain West.

Basin big sagebrush (*Artenisia tridentata*) in the Snake River Plain of Idaho.

Atlantic white-cedar (*Chamaecyparis thyoides*) stands in the Great Dismal Swamp of Virginia and in North Carolina and possibly across the entire range.

Streams in the Mississippi Alluvial Plain.
National CRP Practices (Continued)

CP25 Rare and Declining Habitat (Continued)

L Approved Critically Endangered and Endangered Ecosystems (Continued)

Endangered (85-98 Percent Decline)

Old-growth and other virgin forests in regions and in States other than in those already listed, except in Alaska.

Mesic limestone forest and barrier island beaches in Maryland.

Coastal plain Atlantic white-cedar swamp, maritime oak-holly (*Quercus spp.*-*Ilex* spp.) forest, maritime redcedar (*Juniperus virginiana*) forest, marl fen, marl pond shore, and oak openings in New York.

Coastal heathland in southern New England and on Long Island.

Pine-oak-heath sandplain woods and lake sand beach in Vermont.

Floodplain forests in New Hampshire.

Red spruce (*Picea rubens*) forests in the central Appalachians (West Virginia).

Lowland forest in southeastern Missouri.

High-quality oak-hickory (*Quercus spp.*-*Carya* spp.) forest on the Cumberland Plateau and on the Highland Rim of Tennessee.

Limestone redcedar (*Juniperus virginianus*) glades in Tennessee.

Wet longleaf pine savanna and eastern upland longleaf pine forest in Louisiana.

Calcareous prairie, Fleming glade, shortleaf pine/oak-hickory forest, mixed hardwood-loblolly pine forest, eastern xeric sandhill woodland, and stream terrace sandy woodland/savanna in Louisiana.

Slash pine (*Pinus elliottii*) forests in southwestern Florida.

Red pine and white pine forests in Minnesota.

Coastal redwood (*Sequoia sempervirens*) forests in California.
National CRP Practices (Continued)

CP25 Rare and Declining Habitat (Continued)

L Approved Critically Endangered and Endangered Ecosystems (Continued)

Old-growth ponderosa pine \((\textit{Pinus ponderosa})\) forests in the northern Rocky Mountains, Intermountain West, and eastside Cascades Mountains.

Riparian forests in California, Arizona, and New Mexico.

Coastal sage scrub (especially maritime) and coastal mixed chaparral in southern California.

Dry forest on main islands of Hawaii.

All types of native habitats in the lower delta of the Rio Grande River, Texas.

Tallgrass prairie (all types combined).

Native shrub and grassland steppe in Oregon and in Washington.

Low elevation grasslands in Montana.

Gulf Coast pitcher plant \((\textit{Sarracenia} \text{spp})\) bogs.

Upland hardwoods in the Coastal Plain of Tennessee.

Pocosins (evergreen shrub bogs) and ultramafic soligenous wetlands in Virginia.

Mountain bogs (southern Appalachian bogs and swamp forest-bog complex) in Tennessee and in North Carolina.

Upland wetlands on the Highland Rim of Tennessee.

Saline wetlands in eastern Nebraska.

Wetlands (all types combined) in south-central California, Illinois, Indiana, Iowa, Missouri, Nebraska, and Ohio.

Marshes in the Carson-Truckee area of western Nevada.

Low-elevation wetlands in Idaho.
National CRP Practices (Continued)

CP25  Rare and Declining Habitat (Continued)

L  Approved Critically Endangered and Endangered Ecosystems (Continued)

Woodo hardwood draws, glacial pothole ponds, and peatlands in Montana.

Vernal pools in the Central Valley and in southern California.

Marshes in the Coos Bay area of Oregon.

Freshwater marsh and coastal salt marsh in Southern California.

Seasonal wetlands of the San Francisco Bay, California.

Large streams and rivers in all major regions.

Aquatic mussel (Unionidae) beds in Tennessee.

Submersed aquatic vegetation in the Chesapeake Bay, in Maryland, and in Virginia.

Mangrove swamps and salt marsh along the Indian River lagoon, Florida.

Seagrass meadows in Galveston Bay, Texas.
National CRP Practices (Continued)

**CP25 Rare and Declining Habitat (Continued)**

**L Approved Critically Endangered and Endangered Ecosystems (Continued)**

**Threatened (70 - 84 Percent Decline)**

Nationwide riparian forests (other than in already listed regions), including southern bottomland hardwood forests.

Xeric habitats (scrub, scrubby flatwoods, sandhills) on the Lake Wales Ridge, Florida.

Tropical hardwood hammocks on the central Florida keys.

Northern hardwood forest, aspen (*Populus* spp.) parkland, and jack pine (*Pinus banksiana*) forests in Minnesota.

Saline prairie, western upland longleaf pine forest, live oak-pine-magnolia (*Quercus virginiana-Pinus* spp.-*Magnolia* spp.) forest, western xeric sandhill woodland, slash pine-pond baldcypress-hardwood (*Pinus elliottii-Taxodium ascendens*) forest, wet and mesic spruce-pine (P. glabra)-hardwood flatwoods, wet mixed hardwood-loblolly pine (*Pinus taeda*) flatwoods, and flatwoods ponds in Louisiana.

Alvar grassland, calcareous pavement barrens, dwarf pine ridges, mountain spruce-fir forest, inland Atlantic whitecedar swamp, freshwater tidal swamp, inland salt marsh, patterned peatland, perched bog, pitch pine-blueberry (*Pinus rigida-Vaccinium* spp.) peat swamp, coastal plain poor fens, rich graminoid fen, rich slopping fen, and riverside ice meadow in New York.

Maritime-like forests in the Clearwater Basin of Idaho.

Woodland and chaparral on Santa Catalina Island.

Southern tamarack (*Larix laricina*) swamp in Michigan.

Wetlands (all kinds) in Arkansas, Connecticut, Kentucky, and Maryland.

Marshes in the Puget Sound region, Washington.

Cienegas (marshes) in Arizona.

Coastal wetlands in California.
National CRP Practices (Continued)

CP27 Farmable Wetlands Pilot Wetland

A Purpose

The purpose of this practice is to restore the functions and values of wetlands that have been devoted to agricultural use. Hydrology and vegetation must be restored to the maximum extent possible, as determined by USDA.

B Program Policy

Apply this practice to eligible wetlands that are suitably located and adapted to the restoration of wetland functions and values. The restoration of the wetland hydrology and vegetation is required to the maximum extent possible.

For cropland to be eligible to be enrolled in CRP under FWP and be devoted to CP27, all of the following must be met:

- COC determines both of the following:
  - cropland meets cropping history requirements
  - an associated buffer (CP28) is offered

* * *

3-15-13 2-CRP (Rev. 5) Amend. 15
National CRP Practices (Continued)

CP27  Farmable Wetlands Pilot Wetland (Continued)

C  Size Requirements

The maximum acceptable size of any 1 CP27 is 40 acres. Wetlands greater than 40 acres in size are not eligible for enrollment in CRP under FWP.

Note:  The total of all wetlands may exceed 40 acres.

Example:  A producer offers a 41 acre wetland. Because the total wetland is greater than 40 acres in size, the entire 40 acre wetland is ineligible for enrollment in CRP under FWP.

D  C/S Eligibility

To be eligible for C/S, this practice shall:

- only be enrolled under FWP
- only be enrolled with an eligible associated buffer (CP28)
- meet the cropping history requirements
- be included in the approved conservation plan
- be maintained for the life of CRP-1
- restore the functional capability and values of the wetland.

E  Authorized Payment

Payments, including annual rental, CRP-SIP, PIP, 20 percent SRR incentive, and C/S are authorized for CP27.
National CRP Practices (Continued)

CP27 Farmable Wetlands Pilot Wetland (Continued)

</tr>
</tbody>
</table>
G Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Limit C/S to the minimum work and materials necessary to develop or restore the wetland hydrology, and establish an adequate cover to improve environmental benefits.
- The wetland shall be restored to the extent identified according to subparagraph B.
- Chemicals used in establishing the practice must be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.
- The practice must be established and maintained according to the practice standards in FOTG.
- The hydrology of the wetland must be maintained according to the operation and maintenance requirements for the practice standard.

H Planting Timespan

Planting or sowing of the approved permanent cover shall be completed within 12 months of the effective date of CRP-1. See 2-CRP, paragraph 426 for exceptions.

I Environmental Concerns

Consideration of water quality, wildlife, and other environmental concerns are to be evaluated in the planning and establishment of this practice.
CP27  Farmable Wetlands Pilot Wetland (Continued)

J  Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG.

C/S shall be refunded if any of the following apply:

• producer destroys the practice during the life of CRP-1
• producer fails to maintain the cover during the life of CRP-1
• the cover fails to provide adequate protection of water quality during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.

K  Associated Practice

This practice is only authorized with the associated practice CP28, Farmable Wetland Pilot Buffer, to ensure that the functions and values of the wetland are maintained for the length of the contract.

L  Technical Responsibility

NRCS or TSP shall have the technical responsibility for this practice, except in those areas established to trees, the Forest Service or State Forestry Agency shall have the technical responsibility.

M  Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.  See paragraph 428.

C/S is authorized for management activities.
National CRP Practices (Continued)

CP28  Farmable Wetlands Pilot Buffer

A  Purpose

The purpose of this practice is to provide a vegetative buffer around wetlands (CP27) to remove sediment, nutrients, and pollutants from impacting the wetland and to provide wildlife habitat for the associated wetland.

B  Program Policy

For cropland to be eligible to be enrolled in CRP under FWP and to be devoted to CP28, COC must determine both of the following:

- cropland meets cropping history requirements
- the cropland offered is adjacent to an eligible wetland (CP27).

CP28 is not eligible to be enrolled without CP27.

C  Size Requirements

The maximum size of any associated buffer (CP28) enrolled in CRP under FWP is 4 times the size of the wetland. STC’s may determine a buffer ratio less than 4:1, consistent with program purposes and with State Technical Committee concurrence.

Note: The total acreage of each associated buffer must not exceed the size limitation.

Example: A producer offers a 3 acre eligible wetland (CP27) for enrollment in CRP under FWP. NRCS or TSP determines that the associated buffer (CP28) necessary to protect the wetland is 6 acres (2 to 1 ratio). CP27 and CP28 are both eligible for enrollment in CRP under FWP provided all other eligibility requirements are met.

D  C/S Eligibility

To be eligible for C/S, this practice shall:

- be enrolled under FWP
- be enrolled with the associated CP27 practice
- be required by the approved conservation plan
- meet the cropping history requirements
- improve environmental benefits to an acceptable level
- be maintained for the life of CRP-1
- prevent degradation of environmental benefits from recurring
- maintain and enhance the functions and values of the wetland system.
### E  C/S Policy

F  Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

• The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.

• Limit C/S to the minimum work and materials necessary to establish an adequate cover to improve environmental benefits.

• Practice shall reduce nutrients, sediment, organic matter, pesticides, and other pollutants that are being delivered to the associated wetland CP27, * * * and CP41.

• Chemicals used in establishing the practice must be:
  • Federally, State, and locally registered
  • applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

• Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.

• The practice must be established and maintained according to the practice standards in FOTG.

G  Planting Timespan

Planting or sowing of the approved permanent cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

H  Environmental Concerns

Consideration of water quality, wildlife, and other environmental concerns are to be evaluated in the planning and establishment of this practice.
CP28 Farmable Wetlands Pilot Buffer (Continued)

I Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG.

C/S shall be refunded if any of the following apply:

- producer destroys the practice during the life of CRP-1
- producer fails to maintain the cover during the life of CRP-1
- the cover fails to provide adequate protection of water quality during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.

J Associated Practice

This practice is only authorized with the associated practice CP27, * * * FWP Constructed Wetland, and CP41, FWP Flooded Prairie Wetland, to ensure that the functions and values of the wetland are maintained for the length of the contract.

K Technical Responsibility

NRCS or TSP shall have the technical responsibility for this practice.

L Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.
National CRP Practices (Continued)

CP29 Marginal Pastureland Wildlife Habitat Buffer

A Purpose

The purpose of this practice is to remove nutrients, sediment, organic matter, pesticides, and other pollutants from surface runoff and subsurface flow by deposition, absorption, plant uptake, denitrification, and other processes, and thereby reduce pollution and protect surface water and subsurface water quality while enhancing the ecosystem of the water body. By restoring native plant communities, characteristics for the site will assist in stabilizing stream banks, reducing flood damage impacts, and restoring and enhancing wildlife habitat.

B Program Policy

For marginal pastureland to be eligible to be enrolled in CRP to be devoted to CP29, both of the following must be met:

- COC determines all of the following:
  - all marginal pastureland eligibility requirements in subparagraph 181 C are met
  - the natural vegetation for the site is primarily a mix of grasses, shrubs, and forbs

  Note: The practice will enhance the primarily grass, shrub, and forb community and provide water quality improvement and wildlife habitat benefits.

- the marginal pastureland offered is immediately adjacent and parallel to 1 of the following:
  - stream having perennial flow
National CRP Practices (Continued)

CP29 Marginal Pastureland Wildlife Habitat Buffer

The following guidance on CP29 planning and designing was issued by NRCS in Washington Bulletin WA300-4-25 on June 14, 2004.

WASHINGTON BULLETIN WA300-4-25

SUBJECT: LTP-Use of CP-29 Marginal Pastureland Wildlife Habitat Buffer

Purpose: To provide guidance for planning and designing the CP-29 practice.

The following guidelines are being recommended for use in planning and practice design for CP-29, Marginal Pastureland Wildlife Habitat Buffer:

CP-29 practice will be used on riparian sites that occur in the lower precipitation areas of eastern Washington. These sites had few if any trees in the native plant communities.

CP-29 practice can also be used on riparian sites that occur in the higher precipitation areas, where the native plant communities did include trees, if site conditions are such that the establishment of trees is no longer practical or feasible. This might include sites where stream incising has caused the original water table to drop.

Vegetation restoration for CP-29 practices will always include a minimum of 200 native shrubs per acre, based on the total acreage of the CP-29 practice. The shrubs will be planted in the best growing sites within the practice area. In some cases, this may be willows planted along the stream bank and in other cases, it may be upland species planted away from the stream.

Herbaceous vegetation plantings will typically be limited to those areas that currently do not support an adequate stand of perennial grasses or forbs. Native species will be used to replant these areas. Areas that currently support full stands of existing non-native perennial grasses or forbs will not be required to be reseeded.

Planning the width of the CP-29 practice will depend on the purpose(s) of the buffer and must meet 2-CRP limits.

The practice will be planned under the Riparian Herbaceous Cover 390 practice standard. In addition, shrubs will be planted under Tree and Shrub Establishment 612 practice standard and grass will be planted under Critical Area Planting 342 practice code.
National CRP Practices (Continued)

CP29  Marginal Pastureland Wildlife Habitat Buffer (Continued)

B  Program Policy (Continued)

• seasonal stream

**Important:** USGS maps shall not be solely used to determine seasonal streams. A seasonal stream is a stream that contains water for only part of the year but more than just during and/or after rainfall or snowmelt. Seasonal streams do not include:

- wetlands of any type
- land devoted to CP9
- terrace channels
- grass or sod waterways
- gullies
- narrow or wide wash
- roadside ditches
- well, spring, or seep
- marsh or swamp
- center pivot irrigation corners
- irrigation canals
- tail water recovery pit/system.

**Note:** See paragraph 181 for more information about seasonal and perennial streams.

- sinkholes and karst areas
- other **permanent** water bodies, such as lakes and ponds if both of the following are met:
  - provides water cover throughout the year in all years
  - flows from the water body off the farm.

**Exception:** A pond that is less than 5.0 acres and does not flow from the water body off the farm is not eligible to be enrolled in CP29.

**Note:** Water bodies that do not provide permanent water cover throughout the year in all years are not eligible.
National CRP Practices (Continued)

CP29  Marginal Pastureland Wildlife Habitat Buffer (Continued)

B  Program Policy (Continued)

• NRCS or TSP determines, based on a site visit, all of the following:
  • the marginal pastureland is suitable to be devoted to a wildlife habitat buffer
    
    **Note:** Marginal pastureland to be devoted to trees should be enrolled as CP22.
  • the wildlife habitat buffer is needed and feasible to solve the resource concern
  • the marginal pastureland is capable, after the wildlife habitat buffer is established, of substantially reducing pollutants in the nearby eligible stream or other water body.

CP29’s are not eligible to be used in conjunction with the following practices:

• CP22, because, if needed, CP22’s include a grass buffer
• CP23, because acreage devoted to CP23 may include up to a 3 to 1 ratio of uplands to ensure that the functions and values of the cropped wetland are restored
• CP23A, because acreage devoted to CP23A may include up to a 4 to 1 ratio of uplands to ensure that the functions and values of the cropped wetland are restored
• CP30
• CP9, because acreage devoted to CP9 **must** include an adequate buffer to protect the shallow water area.

C  Size Requirements

The minimum acceptable width of a wildlife habitat buffer is 20 feet. A wetland habitat buffer may be applied up to a maximum average width of 120 feet, if needed to accomplish the purpose of the practice.

**Note:** The maximum average width of wildlife habitat buffers established for any purpose other than protection and enhancement of water quality, shall not exceed 120 feet.
Exhibit 11  
(Par. 31, 34, 66, 171, 181, 237, 366, 426, 428, 429, 462, 491, 511, Ex. 26)  
National CRP Practices (Continued)

CP29 Marginal Pastureland Wildlife Habitat Buffer (Continued)

C Size Requirements (Continued)

When the minimum design specification for water quality exceeds 120 feet, the minimum design specification is the maximum average width that may be enrolled. NRCS or TSP must document the need for a minimum design specification in excess of 120 feet in writing.

**Note:** NRCS or TSP will determine the documentation needed to support an additional average width for water quality purposes consistent with FOTG standards. The documentation must be in the case file.

**Example:** Producer offers to enroll land to be devoted to a 120 foot wide wildlife habitat buffer to protect the adjacent eligible stream. Based on the soils, slope, and other site conditions, NRCS or TSP documents that to address the water quality resource problem and to function properly, the wildlife habitat buffer must be a minimum of 145 feet in width. Because the purpose of the wildlife habitat buffer is the protection and enhancement of water quality, the minimum of width 145 feet may be enrolled. The 145 foot minimum width is the maximum acreage that may be enrolled.

The wildlife habitat buffer shall begin at the top of the stream bank. In some cases there may be land that is adjacent to the stream that does not meet the eligibility criteria to be enrolled in CRP. **This land shall not be enrolled in CRP.** However, if the eligible land is enrolled in CRP as a wildlife habitat buffer, the ineligible land shall be included:

- in the area used as a wildlife habitat buffer
- in the conservation plan
- when determining the width of the wildlife habitat buffer.

A wildlife habitat buffer adjacent to a stream that includes land not enrolled in CRP. The first 15 feet adjacent to the stream (starting at the top of the stream bank) does not meet the eligibility criteria to be enrolled in CRP.

The wildlife habitat buffer is 100 feet wide. Only the eligible land (85 feet width) is enrolled in CRP. The conservation plan is for the entire wildlife habitat buffer (100 feet). The producer is responsible for maintaining the entire practice (100 feet) according to the plan. Failure to maintain the entire 100 feet may result in CRP payment reductions or termination.
National CRP Practices (Continued)

CP29  Marginal Pastureland Wildlife Habitat Buffer (Continued)

D  C/S Eligibility

To be eligible for C/S, this practice shall:

• be required by the approved conservation plan

• meet the marginal pastureland criteria

• improve environmental benefits to an acceptable level

• reduce additional sediment or pollutants that are being delivered to areas identified in subparagraph B

• be maintained for the contract payment period

• prevent degradation of environmental benefits from recurring.

E  C/S Policy

F Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- Limit C/S to the minimum minerals and seed necessary to establish an adequate cover to improve environmental benefits.

- Practice shall reduce nutrients, sediment, organic matter, pesticides, and other pollutants that are being delivered to the areas identified in subparagraph B.

- Chemicals used in performing the practice **must** be:
  
  - Federally, State, and locally registered
  
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
National CRP Practices (Continued)

CP29 Marginal Pastureland Wildlife Habitat Buffer (Continued)

F Practice Requirements (Continued)

- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.

- The wildlife habitat buffer **must** be established and maintained according to the practice standards in FOTG.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

H Environmental Concerns

Consideration of wildlife habitat, water quality and quantity, and other environmental concerns are to be evaluated in the planning and establishment of the protective measure.

I Practice Maintenance

This practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG.

C/S shall be refunded if either of the following applies:

- the producer destroys the practice during the contract period

- the cover fails to provide adequate protection of water quality during the practice lifespan, unless the failure is caused by circumstances beyond the producer’s control.
National CRP Practices (Continued)

CP29 Marginal Pastureland Wildlife Habitat Buffer (Continued)

J Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

K Technical Responsibility

NRCS or TSP shall have technical responsibility for this practice.
National CRP Practices (Continued)

CP30 Marginal Pastureland Wetland Buffer

B Program Policy

CP30 Practice for CREP

Effective April 14, 2010, practice CP30 is eligible for enrollment in CREP. Practice implementation shall be accomplished following normal CP30 policy and applicable NRCS technical standards.

The intent of the CP30 practice under CREP is to buffer wetlands that are hydrologically connected to streams designated as eligible for CP22 enrollment under the CREP agreement. Only wetlands connected to streams that meet this criterion may be buffered using a CREP CP30. Hydrologically connected means the wetland moisture comes from either the designated stream, such as during periods of high flow, or from a ground water source connected to the stream.
CP30  Marginal Pastureland Wetland Buffer

A  Purpose

The purpose of this practice is to remove nutrients, sediment, organic matter, pesticides, and other pollutants from surface runoff and subsurface flow by deposition, absorption, plant uptake, denitrification, and other processes, and thereby reduce pollution and protect surface water and subsurface water quality while enhancing the ecosystem of the water body. The practice will enhance and/or restore hydrology and plant communities associated with existing or degraded wetland complexes. The goal is to enhance water quality, reduce nutrient and pollutant levels, and improve wildlife habitat.

B  Program Policy

For marginal pastureland to be eligible to be enrolled in CRP to be devoted to CP30, both of the following must be met:

- COC determines both of the following:
  - all marginal pastureland eligibility requirements in subparagraph 181 C are met
  - the marginal pastureland offered is immediately adjacent and parallel to 1 of the following:
    - stream having perennial flow
    - seasonal stream

Important: USGS maps shall not be solely used to determine seasonal streams. A seasonal stream is a stream that contains water for only part of the year but more than just during and/or after rainfall or snowmelt. Seasonal streams do not include:

- wetlands of any type
- land devoted to CP9
- terrace channels
- grass or sod waterways
- gullies
- narrow or wide wash
- roadside ditches
National CRP Practices (Continued)

CP30  Marginal Pastureland Wetland Buffer (Continued)

B  Program Policy (Continued)

- well, spring, or seep
- marsh or swamp
- center pivot irrigation corners
- irrigation canals
- tail water recovery pit/system.

Note: See paragraph 181 for more information about seasonal and perennial streams.

- sinkholes and karst areas
- wetlands with water areas capable of reducing damages by sedimentation and associated pollutants that meet 1 of the following:
  - Permanently Flooded - water covers the land surface throughout the year in all years
  - Intermittently Exposed - surface water is present throughout the year except in years of extreme drought
  - Semipermanently Flooded - surface water is present throughout the growing season in most years
    
    Note: When surface water is absent, the water table is at or very near the land surface.

- Seasonally Flooded - surface water is present for extended periods of not less than 21 calendar days especially early in the growing season, but is absent by the end of the growing season in most years

Note: When surface water is absent, the water table is at or very near the land surface.
B Program Policy (Continued)

- other permanent water bodies, such as lakes and ponds if both of the following are met:
  - provides water cover throughout the year in all years
  - flows from the water body off the farm.

**Exception:** A pond that is less than 5.0 acres and does not flow from the water body off the farm is not eligible to be enrolled in CP30.

**Note:** Water bodies that do not provide permanent water cover throughout the year in all years are not eligible.

- NRCS or TSP determines, based on a site visit, all of the following:
  - the marginal pastureland is suitable to be devoted to a wetland buffer
  - the wetland buffer is needed and feasible to solve the resource concern
  - the marginal pastureland is capable, after the wetland buffer is established, of substantially reducing pollutants in the nearby eligible stream or other water body.

CP30’s are not eligible to be used in conjunction with the following practices:

- CP22, because, if needed, CP22’s include a grass buffer
- CP23, because acreage devoted to CP23 may include up to a 3 to 1 ratio of uplands to ensure the functions and values of the cropped wetland are restored
- CP23A, because acreage devoted to CP23A may include up to a 4 to 1 ratio of uplands to ensure the functions and values of the cropped wetland are restored
- CP9, because acreage devoted to CP9 must include an adequate buffer to protect the shallow water area
- CP29.
National CRP Practices (Continued)

CP30 Marginal Pastureland Wetland Buffer (Continued)

C Size Requirements

The minimum acceptable width of a wetland buffer is 20 feet. A wetland buffer may be applied up to a maximum average width of 120 feet, if needed to accomplish the purpose of the practice.

Note: The maximum average width of wetland buffers established for any purpose other than protection and enhancement of water quality, shall not exceed 120 feet.

*--Exception: Expiring CRP acres previously enrolled into CRP under the WBP eligibility criteria may exceed the 120 foot maximum size requirement.--*

When the minimum design specification for water quality exceeds 120 feet, the minimum design specification is the maximum average width that may be enrolled. NRCS or TSP must document the need for a minimum design specification in excess of 120 feet in writing.

Note: NRCS or TSP will determine the documentation needed to support an additional average width for water quality purposes consistent with FOTG standards. The documentation must be in the case file.

Example: Producer offers to enroll land to be devoted to a 120 foot wide wetland buffer to protect the adjacent eligible stream. Based on the soils, slope, and other site conditions, NRCS or TSP documents that to address the water quality resource problem and to function properly, the wetland buffer must be a minimum of 145 feet in width. Because the purpose of the wetland buffer is the protection and enhancement of water quality, the minimum of width 145 feet may be enrolled. The 145 foot minimum width is the maximum acreage that may be enrolled.

The wetland buffer shall begin at the top of the stream bank. In some cases there may be land that is adjacent to the stream that does not meet the eligibility criteria to be enrolled in CRP. **This land shall not be enrolled in CRP.** However, if the eligible land is enrolled in CRP as a wetland buffer, the ineligible land shall be included:

- in the area used as a wetland buffer
- in the conservation plan
- when determining the width of the wetland buffer.

A wetland buffer adjacent to a stream that includes land not enrolled in CRP. The first 15 feet adjacent to the stream (starting at the top of the stream bank) does not meet the eligibility criteria to be enrolled in CRP.

The wetland buffer is 100 feet wide. Only the eligible land (85 feet width) is enrolled in CRP. The conservation plan is for the entire wetland buffer (100 feet). The producer is responsible for maintaining the entire practice (100 feet) according to the plan. Failure to maintain the entire 100 feet may result in CRP payment reductions or termination.
National CRP Practices (Continued)

CP30 Marginal Pastureland Wetland Buffer (Continued)

D C/S Eligibility

To be eligible for C/S, this practice shall:

- be required by the approved conservation plan
- meet the marginal pastureland eligibility criteria
- improve environmental benefits to an acceptable level
- reduce additional sediment or pollutants that are being delivered to areas identified in subparagraph B
- be maintained for the contract payment period
- prevent degradation of environmental benefits from recurring.

E C/S Policy

F  Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- Limit C/S to the minimum minerals and seed necessary to establish an adequate cover to improve environmental benefits.

- Practice shall reduce nutrients, sediment, organic matter, pesticides, and other pollutants that are being delivered to the areas identified in subparagraph B.

- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.

- The wetland buffer must be established and maintained according to the practice standards in FOTG.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.
National CRP Practices (Continued)

CP30 Marginal Pastureland Wetland Buffer (Continued)

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

H Environmental Concerns

Consideration of wildlife habitat, water quality and quantity, and other environmental concerns are to be evaluated in the planning and establishment of the protective measure.

I Practice Maintenance

This practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG.

C/S shall be refunded if either of the following applies:

- the producer destroys the practice during the contract period
- the cover fails to provide adequate protection of water quality during the practice lifespan, unless the failure is caused by circumstances beyond the producer’s control.

J Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

K Technical Responsibility

NRCS shall have technical responsibility for this practice.
National CRP Practices (Continued)

CP31 Bottomland Timber Establishment on Wetlands

A Purpose

The purpose of this practice is to establish and provide for the long-term viability of a bottomland hardwood stand of trees that will:

- control sheet, rill, scour, and other erosion
- reduce water, air, or land pollution
- restore and enhance the natural and beneficial functions of wetlands
- promote carbon sequestration
- restore and connect wildlife habitat.

B Program Policy

Apply this practice to eligible lands suitable for growing bottomland hardwood trees or adapted shrubs that will provide multipurpose forest and wildlife benefits.

Note: Cottonwoods may be planted to enhance the viability of other hardwood trees (oaks, etc.)

Selection of cottonwood as a component must be silviculturally and ecologically appropriate for the long-term health and production of the stand. Hydrologic and soil characteristics must be appropriate for the planting of cottonwood species.

Example: Participant A enrolls 100 acres as CP31 who, working with a State Forester, selects cottonwood and 3 other silviculturally appropriate hardwood species. The cottonwoods are planted on 12’ x 12’ spacing and the other hardwoods are planted on 12’ x 24’ spacing. The plan calls for weed and insect control during year 1 and cottonwood thinning during year 15. The cottonwood serves as a nurse crop for the other hardwood species in the neighboring rows. In year 2, Participant A may be eligible to enter into an agreement with a carbon company where Participant A sells greenhouse gas credits provided the terms and conditions of the CRP contract are not impacted. This agreement is solely between Participant A and the carbon company.
National CRP Practices (Continued)

CP31  Bottomland Timber Establishment on Wetlands (Continued)

B  Program Policy (Continued)

The following diagram illustrates a typical cottonwood/other hardwood planting.

- Cottonwood  12 foot x 12 foot spacing
- Other hardwood  12 foot x 24 foot spacing
National CRP Practices (Continued)

CP31  Bottomland Timber Establishment on Wetlands (Continued)

C  Eligibility

To be eligible for C/S, this practice shall:

- do either of the following:
  - reduce excessive erosion to an acceptable level and increase sediment trapping efficiencies
  - improve surface or ground water quality
- reduce scour, gully, stream bank, sheet, or rill erosion
- prevent excessive erosion from occurring
- enhance food and cover for wildlife
- be maintained for the life of CRP-1
- be included in the approved conservation plan
- be within the recognized 100-year flood plain for a river or stream with permanent flow.

Note: A wetland designation, if needed, must be made by NRCS.
D C/S Policy

The following table provides C/S policies for this practice.

<table>
<thead>
<tr>
<th>IF the component is…</th>
<th>AND the justification is…</th>

National CRP Practices (Continued)

CP31 Bottomland Timber Establishment on Wetlands (Continued)

E Requirements

The following are requirements for this practice:

- approval **must** be obtained from the State Forester and State Wildlife Agency certifying that planting of cottonwood as a nurse crop is appropriate for the State

- planting of cottonwood trees may only be for nurse trees in a pattern appropriate for that purpose

- plantings **must** be protected from destructive fire and from grazing by domestic livestock for the life of CRP-1.

- chemicals used in performing the practice **must** be:
  
  - Federally, State, and locally registered
  
  - applied according to authorized uses, directions on the label, and other Federal and State policies and requirements.

F Planting

Planting after CRP-1 is approved by COC shall be completed by the end of the next normal planting period, unless the producer can provide acceptable documentation that seed or tree stock is not available.

G Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about:

- types of plantings
- spacing
- water management structures
- other practice specifications.
National CRP Practices (Continued)

CP31  Bottomland Timber Establishment on Wetlands (Continued)

H  Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1.

Tree thinning or harvest of cottonwood species may be permitted after year 9 of the CRP contract appropriate for the stand as determined by the State Forester. C/S is authorized for tree thinning.

I  Technical Responsibility

NRCS, State Forester, or TSP shall have technical responsibility for this practice. The State Forester has responsibility for determining if selection of a cottonwood species component is silviculturally appropriate.

J  Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.
- The practice must be established and maintained according to the practice standards in FOTG.

K  Planting Timespan

Planting or sowing of the approved permanent cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

L  Natural Regeneration

Natural regeneration by nuts or seed is not permitted under this practice.

M  Management Activities

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.
National CRP Practices (Continued)

CP33 Habitat Buffers for Upland Birds

A Purpose

The purpose of this practice is to provide food and cover for quail and upland birds in cropland areas. Secondary benefits may include reducing soil erosion from wind and water, increasing soil and water quality, protecting and enhancing the on-farm ecosystem.

Apply this practice around the field edges of eligible cropland that is suitably located and adaptable to the establishment of wildlife habitat for primarily quail and upland bird species. Upland habitat buffers will be allowed to re-vegetate by natural herbaceous succession, and/or will be established to adapted species of native, warm-season grass, legumes, wildflowers, forbs, and limited shrub and tree plantings, as specified according to an approved conservation plan. The conservation plan must be designed according to the NRCS FOTG.

B Total Acres Enrolled

*--Total acres enrolled shall not exceed 500,000 acres:--*

- nationwide
- for the practice.

Allocations of acreage by State shall not be exceeded.

***
National CRP Practices (Continued)

CP33  Habitat Buffers for Upland Birds

A  Purpose

*--A Factsheet about the Washington CP33 is available on the State Share Point site under Farm Programs, CRP, Shared Documents.

B  Total Acres Enrolled

The Washington CP33 allocation is 5,000 acres. The limitation is only applied in COLS at contract approval. Before proceeding with an offer, the County Office may wish to check with the State Office to determine current estimated enrollment.--*
D Eligible Land

*--In Washington, a CP33 is not eligible around a field with a perennial cover such as hay or CRP.

Washington CP33 acreage will be planted to a diversified mix usually including at least 3 native grasses and 3 forbs.--*
National CRP Practices (Continued)

CP33 Habitat Buffers for Upland Birds (Continued)

C Monitoring Plans

A monitoring and evaluation plan must be developed in consultation with the State Technical Committee, including FWS, State Fish and Game agencies, and other interested quail parties. The plan must provide the ability to establish baseline data on quail populations and estimate increased quail population and impact on other populations as a result of this practice, including the following:

- verification that suitable Northern Bobwhite quail cover is established
- verification that appropriate cover management practices are implemented on a timely basis
- States must control acreage within their allocation
- implementing a Statewide sampling process that will provide reliable estimates of the number of quail per acre (or some other appropriate measure):
  - before this practice is implemented (baseline)
  - resulting from the established CRP cover.

Monitoring and evaluation plans must be in place before signup for this practice may begin.

States are not authorized to enroll acres in this practice unless an approved monitoring plan is in place. A monitoring protocol developed by Dr. Wes Burger of Mississippi State University in collaboration with the Southeast Quail Working Group at the request of FSA is recommended. Other technically adequate plans are acceptable.

D Eligible Land

This practice is limited to the following:

- cropland otherwise eligible according to paragraph 151
- cropland around field edges suitable for quail and upland birds.
National CRP Practices (Continued)

CP33  Habitat Buffers for Upland Birds (Continued)

E  Size Requirements

The minimum average width of a quail and upland bird habitat buffer is 30 feet, with a maximum average width of 120 feet. Buffers will be established to the extent needed to support the targeted species, general resource needs, and participant objectives, but generally should be located around the entire perimeter of the field, or at a minimum, in areas where runoff enters or leaves the field. Within the minimum and maximum widths above, quail and upland bird habitat buffer widths should be designed to conform to minimum field application setback width for manure or chemicals established by State or local regulations.

CP33 buffers should be installed on the field edges (around the perimeter) of a cropped field. See Figure 1. Limitations include:

- travel lanes shall not be enrolled and must be wide enough to allow for normal access of farm machinery to the field
- buffers shall not be used as turn rows, roads, or for storage of crops or equipment
- whole fields shall not be enrolled:
  - fields less than 5 acres should not be enrolled in this practice
  - infeasible to farm does not apply to CP33
- alfalfa fields used for pasture or for hay and marginal pastureland do not qualify for enrollment

Note:  Alfalfa is considered a crop for CP33-purposes only if it is in a rotation according to paragraph 151.

- CP33 buffers shall not be ‘stacked’ with other CRP grass practices on the same land ownership unit.
National CRP Practices (Continued)

CP33 Habitat Buffers for Upland Birds (Continued)

E Size Requirements (Continued)

- Center pivot ‘corners’ (See Figure 2, A and B) shall not be enrolled unless the corner is included as part of a buffer around the field perimeter.

Examples:

1. If a field already has a riparian buffer, this practice may be installed on the remaining sides of the field, but not adjacent to the established riparian buffer or other CRP practices.

2. If a field already has a native grass filter strip, this practice may be installed on the remaining sides of the field, but not adjacent to the established filter strip. If the existing practice is trees (windbreak, shelterbelt, hedgerow, or riparian buffer), this practice can be considered on a case-by-case basis.

If 2 or more of the corners are connected by a buffer along the edge of the field (See Figure 2, A and B) and if the buffer meets the dimensions set forth in the CP33 practice criteria, then center pivot corners may be enrolled as part of the CP33 buffer. The individual corners alone, however, may not be enrolled.
National CRP Practices (Continued)

CP33 Habitat Buffers for Upland Birds (Continued)

F Eligibility

To be eligible for C/S, this practice shall:

- primarily improve, enhance, or create quail and upland bird habitat to an acceptable level
- prevent degradation of quail and upland bird habitat from recurring after establishment
- be maintained for the CRP-1 period
- be included in the approved conservation plan
- prevent degradation of environmental benefits from recurring after establishment.

G C/S Policy

The following contains C/S policies for this practice.

<table>
<thead>

H  Practice Incentives for CRP-SIP

Participants that enroll in this practice may receive a CRP-SIP according to subparagraph 197 A.

I  Practice Incentives for PIP

Participants that enroll in this practice may receive a CRP-PIP according to subparagraph 197 B.
CP33 Habitat Buffers for Upland Birds (Continued)

J Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The seeded acreage shall not be harvested or grazed by domestic livestock for the life of CRP-1 unless grazing is incidental to the normal gleaning of the crop residue in the field according to subparagraph 720 A.

- Limit C/S to the minimum minerals and seed necessary to establish an adequate cover to improve wildlife habitat and environmental benefits.

- Trees and shrubs shall not exceed 10 percent coverage of the buffers. Shrubs and trees selected must provide optimal quail habitat and/or emergency benefits. Shrubs planted for wildlife berries/fruit and trees planted for wildlife fruit/nuts are acceptable if suited to the site.

- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
  - Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.
  - The habitat buffer must be established and maintained according to the practice standards in NRCS FOTG.
  - Buffers shall not be used as turn rows, roads, or for storage of crops or equipment.
  - **Seeding, if it occurs at all, should occur at much lighter rates than for CRP practices aimed at soil conservation and water quality enhancement.** CP33-enrolled acres should be lightly seeded and may even be allowed to regenerate by natural succession without additional seeding, provided that NRCS or a Technical Service Provider certifies adequate seed source for natural regeneration.
  - If natural regeneration fails, the producer is responsible for seeding the buffers to meet the intent of the practice.
National CRP Practices (Continued)

CP33 Habitat Buffers for Upland Birds (Continued)

J Practice Requirements (Continued)

- Desirable vegetation may be propagated through light disking, and may be maintained through light disking every two to three years over the life of the contract.

- Spot application of herbicide may be needed to control undesirable plants.

- Native grass, but does not eliminate beneficial introduced legumes, although the inclusion of native forbs/legumes is encouraged. Alfalfa and clover may be part of the seeding mix.

K Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

L Environmental Concerns

Consideration of wildlife habitat, water quality and quantity, and other environmental concerns are to be evaluated in the planning and establishment of the upland habitat practice.

M Practice Maintenance

This practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in NRCS FOTG.

C/S shall be refunded if either of the following applies:

- the producer destroys the practice during the contract period

- the cover fails to provide adequate upland quail and upland bird habitat and environmental benefits during the practice lifespan, unless the failure is caused by circumstances beyond the producer’s control.
National CRP Practices (Continued)

CP33 Habitat Buffers for Upland Birds (Continued)

N Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. For quail and upland bird buffers, the buffers shall be disturbed on a rotational basis by light disking, prescribed burning, selective herbicide application, or other prescribed methods as approved to set back vegetative succession and woody encroachment, and to expose food seeds. Mowing is an inadequate means of disturbance for quail habitat, except as need to facilitate prescribed burning or light disking. See paragraph 428.

C/S is authorized for management activities.

O Technical Responsibility

NRCS or TSP shall have technical responsibility for this practice.
National CRP Practices (Continued)

CP35A  Emergency Forestry – Longleaf Pine – New

A  Purpose

The purpose of this practice is to establish a stand of primarily longleaf pine in a timber planting that will enhance environmental benefits.

B  Program Policy

Apply this practice to eligible PNIF that had merchantable timber before the 2005 hurricanes.

C  Eligibility

To be eligible for C/S, this practice shall:

- reduce soil erosion to less than the soil loss tolerance
- enhance water quality, wildlife, and erosion control benefit
- be maintained for the life of CRP-1L
- be included in the approved tree planting plan.

D  Contract Activities

Planting Period

The producer has 2 years from the start of the contract to remove debris and replant or allow natural regeneration of the stand. COC’s may waive the replanting period for 1 additional year. Waiver should be based on conditions that are generally beyond the control of the producer. For example, drought or lack of planting stock would be reason to authorize a waiver.

Annual Status Review

A forestry official should conduct an annual status review with the producer until the stand is established. The State Forester will review the plan with the producer and ensure proper control of weeds and undergrowth.

Certification of Practice Completion

A forestry official will certify practice compliance and note acreage treatment. Compliance should follow with standards as outlined in the conservation plan.

Spot Check

FSA staff will conduct a minimum of 10 percent spot checks annually (FY) on EFCRP contracts.
The following shows C/S policies for this practice.

<table>
<thead>
<tr>
<th>IF the component is...</th>
<th>AND the justification is...</th>

National CRP Practices (Continued)

CP35A  Emergency Forestry – Longleaf Pine – New (Continued)

F  Requirements

The following are requirements for this practice.

- Plantings **must** be protected from destructive fire and from grazing by domestic livestock for the life of CRP-1L.

- Chemicals used in performing the practice **must** be:
  - Federally-, State-, and locally-registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State requirements.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1L, as determined by COC.

G  Planting Timespan

Planting or sowing of the approved cover shall be completed within two years of the effective date of CRP-1L. See paragraph 426 for exceptions.

H  Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about types of plantings, spacing, and other practice specifications.
CP35A  Emergency Forestry – Longleaf Pine – New (Continued)

I  Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1L. C/S shall be refunded if either of the following applies:

- the producer destroys the cover during the life of CRP-1L
- the cover fails to adequately improve environmental benefits during the life of CRP-1L, unless the failure is caused by circumstances beyond the producer’s control.

The practice shall be maintained without additional C/S for the life of CRP-1L.

Tree thinning or harvest of cottonwood species may be permitted after year 9 of the CRP contract appropriate for the stand as determined by the State Forester.

J  Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1L, as determined by COC. See paragraph 428.

C/S is authorized for mid contract management activities.

K  Program Development

Follow this subparagraph to develop the county program.

- County practice shall identify the eligible species and provide any requirements, such as spacing, minimum plantings per acre, site preparation, or cultivation, that are conditions for C/S.
- Approved planting methods may be included or incorporated by reference to published technical standards.

L  Technical Responsibility

Technical responsibility for this practice shall be assigned to the Forest Service. If a Forest Service representative is not available, this responsibility may be redelegated to NRCS or TSP.
National CRP Practices (Continued)

CP35B  Emergency Forestry – Longleaf Pine – Existing

A  Purpose

The purpose of this practice is to enhance site characteristics to support an understocked stand made up of primarily longleaf pine that will provide significant environmental benefits.

B  Program Policy

Apply this practice to eligible PNIF that had merchantable timber before the 2005 hurricanes and is suitable for growing trees that will provide multipurpose forest benefits. A forester must determine that the understocked stand is primarily longleaf pine and of sufficient quantity to be a manageable stand.

C  Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the life of CRP-1L
- be included in the approved tree planting plan.

D  C/S Policy

The following shows C/S policies for practices.

CP35B  Emergency Forestry – Longleaf Pine – Existing (Continued)

E  Requirements

The following are requirements for this practice.

- Plantings **must** be protected from destructive fire and from grazing by domestic livestock for the life of CRP-1L.
- Chemicals used in performing the practice **must** be:
  - Federally-, State-, and locally-registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State requirements.
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1L, as determined by COC.

F  Planting Timespan

Natural regeneration and/or planting shall be completed within two years of the effective date of CRP-1L. See paragraph 426 for exceptions.

G  Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about types of plantings, spacing, and other practice specifications.
National CRP Practices (Continued)

CP35B Emergency Forestry – Longleaf Pine – Existing (Continued)

H Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1L. C/S shall be refunded if either of the following applies:

- the producer destroys the cover during the life of CRP-1L
- the cover fails to adequately improve environmental benefits during the life of CRP-1L, unless the failure is caused by circumstances beyond the producer’s control.

The practice shall be maintained without additional C/S for the life of CRP-1L.

Tree thinning or harvest of cottonwood species may be permitted after year 9 of the CRP contract appropriate for the stand as determined by the State Forester.

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1L, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

J Program Development

Follow this subparagraph to develop the county program.

- County practice shall identify the eligible species and provide any requirements, such as spacing, minimum plantings per acre, site preparation, or cultivation, that are conditions for C/S.
- Approved planting methods may be included or incorporated by reference to published technical standards.

K Technical Responsibility

Technical responsibility for this practice shall be assigned to the Forest Service. If a Forest Service representative is not available, this responsibility may be redelegated to NRCS or TSP.
National CRP Practices (Continued)

CP35C  Emergency Forestry – Bottomland Hardwood – New

A  Purpose

The purpose of this practice is to establish and provide for the long-term viability of a bottomland hardwood stand of trees that will:

- control sheet, rill, scour, gully, and other erosion
- reduce water, air, or land pollution
- restore and enhance the natural and beneficial functions of wetlands
- promote carbon sequestration
- restore and connect wildlife habitat.

B  Program Policy

Apply this practice to eligible PNIF that had merchantable timber suitable for growing bottomland hardwood trees or adapted shrubs that will provide multipurpose forest and wildlife benefits.

Note: Cottonwoods may be planted to enhance the viability of other hardwood trees (oaks, etc.)

Selection of cottonwood as a component must be silviculturally appropriate for the long-term health and production of the stand. Hydrologic and soil characteristics must be appropriate for the planting of cottonwood species.

Example: Participant A enrolls 100 acres as CP35B who, working with a State Forester, selects cottonwood and 3 additional silviculturally appropriate hardwood species. The cottonwoods are planted on 12’ x 12’ spacing and the other hardwoods are planted on 12’ x 24’ spacing. The plan calls for weed and insect control during year 1 and cottonwood thinning during year 15. The cottonwood serves as a nurse crop for the other hardwood species in the neighboring rows. In year 2, Participant A may be eligible to enter into an agreement with a carbon company where Participant A sells greenhouse gas credits provided the terms and conditions of the CRP contract are not impacted. This agreement is solely between Participant A and the carbon company.
The following diagram illustrates a typical cottonwood/other hardwood planting.

- ○ Cottonwood 12 foot x 12 foot spacing
- △ Other hardwood 12 foot x 24 foot spacing
C Eligibility

To be eligible for C/S, this practice shall:

- reduce excessive erosion to an acceptable level and increase sediment trapping efficiencies
- improve surface or ground water quality
- restore forestland that has been extensively damaged by the 2005 hurricanes
- reduce scour, gully, stream bank, sheet, or rill erosion
- prevent excessive erosion from occurring
- enhance food and cover for wildlife
- be maintained for the life of CRP-1L
- be included in the approved conservation plan.
National CRP Practices (Continued)

National CRP Practices (Continued)

CP35C  Emergency Forestry – Bottomland Hardwood – New (Continued)

E  Requirements

The following requirements apply for this practice.

- Approval must be obtained from the State Forester and State Wildlife Agency certifying that planting of cottonwood as a nurse crop is appropriate for the State and site.

- Planting of cottonwood trees may only be for nurse trees in a pattern appropriate for that purpose.

- Plantings must be protected from destructive fire and from grazing by domestic livestock for the life of CRP-1L.

- Chemicals used in performing the practice must be:
  - Federally-, State-, and locally- registered
  - applied according to authorized uses, directions on the label, and other Federal and State policies and requirements.

F  Planting

Planting after CRP-1L is approved by COC shall be completed by the end of the next normal planting period, unless the producer can provide acceptable documentation that seed or tree stock is not available.

G  Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about:

- types of planting
- weed control
- spacing
- water management structures
- other practice specifications.
H Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1L.

Tree thinning or harvest of cottonwood species may be permitted after year 9 of the CRP contract appropriate for the stand as determined by the State Forester.

I Technical Responsibility

State Forester, NRCS, or TSP shall have technical responsibility for this practice. The State Forester has responsibility for determining if selection of a cottonwood species component is silviculturally appropriate.

J Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1L.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.
- The practice must be established and maintained according to the practice standards in FOTG.

K Planting Timespan

Planting or sowing of the approved permanent cover shall be completed within 2 years of the effective date of CRP-1L. See paragraph 426 for exceptions.

L Natural Regeneration

Natural regeneration by nuts or seed may be permitted under this practice provided the certified forester believes a viable stand can be reestablished.

M Management Activities

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1L, as determined by COC. See paragraph 428

C/S is authorized for management activities.
National CRP Practices (Continued)

CP35D Emergency Forestry – Bottomland Hardwood – Existing

A Purpose

The purpose of this practice is to enhance site characteristics of understocked stand of existing bottomland hardwood. The understocked stand must also provide for the long-term viability of a bottomland hardwood trees that have been impacted by the 2005 hurricanes deemed as a viable timber stand by a forester. The bottomland hardwood stand will:

- control sheet, rill, scour, and other erosion
- reduce water, air, or land pollution
- restore and enhance the natural and beneficial functions of wetlands
- promote carbon sequestration
- restore and connect wildlife habitat.

B Program Policy

Apply this practice to eligible PNIF that had merchantable timber before the 2005 hurricanes suitable for growing bottomland hardwood trees or adapted shrubs that will provide multipurpose forest and wildlife benefits.

C Eligibility

To be eligible for C/S, this practice shall:

- reduce excessive erosion to an acceptable level and increase sediment trapping efficiencies
- improve surface or ground water quality
- restore or enhance forestland that has been extensively damaged by the 2005 hurricanes
- reduce scour, gully, stream bank, sheet, or rill erosion
- prevent excessive erosion from occurring
- enhance food and cover for wildlife
- be maintained for the life of CRP-1L
- be included in the approved conservation plan.
D C/S Policy

The following provides C/S policies for this practice.

CP35E  Emergency Forestry - Softwood – New

A Purpose

The purpose of this practice is to establish a stand of trees in a timber planting that will enhance environmental benefits for acreage damaged by the 2005 hurricanes.

B Program Policy

Apply this practice to eligible PNIF that had merchantable timber before a 2005 hurricane and is suitable for growing trees that will provide multipurpose forest benefits.

Predominant hardwood may include softwood trees:

- not to exceed 50 percent of the total number of trees planted
- only to provide wildlife habitat diversity to the area
- where used as nurse trees for no economic use.

C Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the life of CRP-1L
- be included in the approved tree planting plan.
D  C/S Policy

The following shows C/S policies for this practice.

E  Requirements

The following are requirements for this practice.

- Approval **must** be obtained from the State Forester certifying that planting up to 50 percent softwoods is an appropriate silvicultural practice for the State.

- Planting in excess of 50 percent **must** receive prior approval from the Forest Service and FSA National Office.

- Plantings **must** be protected from destructive fire and from grazing by domestic livestock for the life of CRP-1L.

- Chemicals used in performing the practice **must** be:
  - Federally-, State-, and locally-registered
  - Applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
  - The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1L, as determined by COC.
National CRP Practices (Continued)

CP35E  Emergency Forestry - Softwood – New (Continued)

F  Planting Timespan

Planting of the approved cover shall be completed within 2 years of the effective date of CRP-1L. See paragraph 426 for exceptions.

G  Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about types of plantings, spacing, and other practice specifications.

H  Practice Maintenance

This practice shall be maintained without additional C/S for the life of CRP-1L as designated by participant.

C/S shall be refunded if either of the following applies:

- the producer destroys the cover during the life of CRP-1L
- the cover fails to adequately improve environmental benefits during the life of CRP-1L, unless the failure is caused by circumstances beyond the producer’s control.

The practice shall be maintained without additional C/S for the life of CRP-1L.

Tree thinning or harvest of cottonwood species may be permitted after year 9 of the CRP contract appropriate for the stand as determined by the State Forester.

I  Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1L, as determined by COC. See paragraph 428.

C/S is authorized for management activities.
CP35E Emergency Forestry - Softwood – New (Continued)

J Program Development

Follow this subparagraph to develop the county program.

- County practice shall:
  - identify the eligible species
  - provide requirements, such as spacing, minimum plantings per acre, including softwoods for cover (to be a minimum amount necessary), site preparation, or cultivation, that are conditions for C/S.
  - Approved planting methods may be included or incorporated by reference to published technical standards.

K Technical Responsibility

Technical responsibility for this practice shall be assigned to the Forest Service. If a Forest Service representative is not available, this responsibility may be redelegated to NRCS or TSP.
National CRP Practices (Continued)

CP35F  Emergency Forestry - Softwood – Existing

A  Purpose

The purpose of this practice is to enhance an existing understocked stand of trees in a timber planting that will enhance environmental benefits for acreage damaged by the 2005 hurricanes.

B  Program Policy

Apply this practice to eligible existing PNIF that had merchantable timber before the 2005 hurricanes and is suitable for growing trees that will provide multipurpose forest benefits.

Predominant softwood planting may include hardwood trees:

7-28-10 2-CRP (Rev. 5) Amend. 1
National CRP Practices (Continued)

CP35G   Emergency Forestry – Upland Hardwood – New (Continued)

E  Requirements

The following are requirements for this practice.

- Approval must be obtained from the State Forester certifying that planting up to 50 percent hardwoods is an appropriate silvicultural practice for the State.

- Planting in excess of 50 percent must receive prior approval from the Forest Service and FSA National Office.

- Plantings must be protected from destructive fire and from grazing by domestic livestock for the life of CRP-1L.

- Chemicals used in performing the practice must be:
  - Federally-, State-, and locally-registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1L, as determined by COC.

F  Planting Timespan

Planting of the approved cover shall be completed within two years of the effective date of CRP-1L. See paragraph 426 for exceptions.

G  Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about types of plantings, spacing, and other practice specifications. This includes the controlling of noxious and invasive plants.
**H Practice Maintenance**

This practice shall be maintained without additional C/S for the life of CRP-1L as designated by participant.

C/S shall be refunded if either of the following applies:

- the producer destroys the cover during the life of CRP-1L
- the cover fails to adequately improve environmental benefits during the life of CRP-1L, unless the failure is caused by circumstances beyond the producer’s control.

The practice shall be maintained without additional C/S for the life of CRP-1L.

Tree thinning or harvest of cottonwood species may be permitted after year 9 of the CRP contract appropriate for the stand as determined by the State Forester.

**I Management Activity**

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1L, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

**J Program Development**

Follow this subparagraph to develop the county program.

- County practice shall:
  - identify the eligible species
  - provide requirements, such as spacing, minimum plantings per acre, including softwoods for cover (to be a minimum amount necessary), site preparation, or cultivation, that are conditions for C/S.
  - Approved planting methods may be included or incorporated by reference to published technical standards.

**K Technical Responsibility**

Technical responsibility for this practice shall be assigned to the Forest Service. If a Forest Service representative is not available, this responsibility may be redelegated to NTCS or TSP.
National CRP Practices (Continued)

CP35H  Emergency Forestry – Upland Hardwood – Existing

A  Purpose

This practice is to enhance site characteristics of an existing stand of trees that were damaged by the 2005 hurricanes. The stand must be a viable understocked stand as determined by a certified forester and provide environmental benefit.

B  Program Policy

Apply this practice to eligible PNIF that had merchantable timber before the 2005 hurricanes and is suitable for growing trees that will provide multipurpose forest benefits.

Predominant softwood may include softwood trees:

- not to exceed 50 percent of the total number of trees planted
- only to provide wildlife habitat diversity to the area
- where used as nurse trees for no economic use.

C  Eligibility

To be eligible for C/S, this practice shall:

- reduce erosion to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the life of CRP-1L
- be included in the approved tree planting plan.
National CRP Practices (Continued)

CP35H  Emergency Forestry – Upland Hardwood – Existing (Continued)

D  C/S Policy

The following shows C/S policies for this practice.

<table>
<thead>
<tr>
<th>IF the component is...</th>

<td></td>
</tr>
</tbody>
</table>

**Note:** Where silviculturally appropriate, as determined by the service forester, softwoods may be planted as trainers, not to exceed 50 percent of the number of trees planted to optimize softwood quality if no commercial use is made of the hardwoods.
E Requirements

The following are requirements for this practice.

• Approval **must** be obtained from the State Forester certifying that planting up to 50 percent hardwoods is an appropriate silvicultural practice for the State.

• Planting in excess of 50 percent **must** receive prior approval from the Forest Service and FSA National Office.

• Plantings **must** be protected from destructive fire and from grazing by domestic livestock for the life of CRP-1L.

• Chemicals used in performing the practice **must** be:
  - Federally-, State-, and locally-registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

• The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1L, as determined by COC.

F Planting Timespan

Planting of the approved cover shall be completed within two years of the effective date of CRP-1L. See paragraph 426 for exceptions.

G Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about types of plantings, spacing, and other practice specifications.
H Practice Maintenance

This practice shall be maintained without additional C/S for the life of CRP-1L as designated by participant.

C/S shall be refunded if either of the following applies:

- the producer destroys the cover during the life of CRP-1L
- the cover fails to adequately improve environmental benefits during the life of CRP-1L, unless the failure is caused by circumstances beyond the producer’s control.

The practice shall be maintained without additional C/S for the life of CRP-1L.

Tree thinning or harvest of cottonwood species may be permitted after year 9 of the CRP contract appropriate for the stand as determined by the State Forester.

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1L, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

J Program Development

Follow this subparagraph to develop the county program.

- County practice shall:
  - identify the eligible species
  - provide requirements, such as spacing, minimum plantings per acre, including softwoods for cover (to be a minimum amount necessary), site preparation, or cultivation, that are conditions for C/S.
  - Approved planting methods may be included or incorporated by reference to published technical standards.

K Technical Responsibility

Technical responsibility for this practice shall be assigned to the Forest Service. If a Forest Service representative is not available, this responsibility may be redelegated to NRCS or TSP.
National CRP Practices (Continued)

CP351 Emergency Forestry – Mixed Trees – Existing

A Purpose

This practice is to enhance an existing understocked mixed stand of trees in a timber planting that will enhance environmental benefits for acreage damaged by the 2005 hurricanes.

B Program Policy

Apply this practice to eligible existing PNIF that had merchantable timber before the 2005 hurricanes and is suitable for growing trees that will provide multipurpose forest benefits.

C Eligibility

To be eligible for C/S, this practice shall:

- reduce erosion to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the life of CRP-1L
- be included in the approved tree planting plan.
**National CRP Practices (Continued)**

**CP351 Emergency Forestry – Mixed Trees – Existing (Continued)**

### D C/S Policy

The following shows C/S policies for this practice.

<table>
<thead>
<tr>
<th>IF the component is...</th>
<th>AND the purpose is...</th>
<th>THEN C/S is...</th>
</tr>
</thead>
</table>
| temporary cover        | • required in the practice specifications, including softwood trees, to ensure survivability of hardwoods  
• needed until required plant stock is available  
• needed because the normal planting period for the species has passed  
• to establish a cover where a soil condition, such as chemical residue, will not immediately allow establishment of permanent cover | authorized using technical practice 
*--codes 314, 315, 327, 340, 394, 460, 550,--*
612, 645, and 647. |
| seeding firebreaks, fuelbreaks, or firelanes | to establish and maintain the cover according to State requirements |

| herbicides | to maintain the vegetative cover, including trees |
| insecticides | temporary cover softwood trees that serve as trainers to produce high-value hardwoods |

**Note:** Where silviculturally appropriate, as determined by the service forester, softwoods may be planted as trainers, not to exceed 50 percent of the number of trees planted to optimize hardwood quality if no commercial use is made of the softwoods.
CP35I Emergency Forestry – Mixed Trees – Existing (Continued)

E Requirements

The following are requirements for this practice.

- At least 50 percent of the stand is not identified as any 1 species of trees.

- Plantings must be protected from destructive fire and from grazing by domestic livestock for the life of CRP-1L.

- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1L, as determined by COC.

F Planting Timespan

Planting of the approved cover shall be completed within two years of the effective date of CRP-1L. See paragraph 426 for exceptions.

G Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about types of plantings, spacing, and other practice specifications. Ensure noxious and invasive plants are controlled throughout the life of the contract.
CP35I Emergency Forestry – Mixed Trees – Existing (Continued)

H Practice Maintenance

This practice shall be maintained without additional C/S for the life of CRP-1L as designated by participant.

C/S shall be refunded if either of the following applies:

• the producer destroys the cover during the life of CRP-1L
• the cover fails to adequately improve environmental benefits during the life of CRP-1L, unless the failure is caused by circumstances beyond the producer’s control.

The practice shall be maintained without additional C/S for the life of CRP-1L.

Tree thinning or harvest of cottonwood species may be permitted after year 9 of the CRP contract appropriate for the stand as determined by the State Forester.

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1L, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

J Program Development

Follow this subparagraph to develop the county program.

• County practice shall:
  • identify the eligible species
  • provide requirements for site preparation and/or cultivation that are conditions for C/S.
  • Approved planting methods may be included or incorporated by reference to published technical standards.

K Technical Responsibility

Technical responsibility for this practice shall be assigned to the Forest Service. If a Forest Service representative is not available, this responsibility may be redelegated to NRCS or TSP.
National CRP Practices (Continued)

CP36  Longleaf Pine - Establishment

A  Purpose

The primary purpose of CP36 is to re-establish longleaf pine stands at densities that benefit wildlife species and protect water quality.

B  Cropland Eligibility

Apply CP36 to otherwise eligible cropland that is located in:

- Alabama, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Texas, and Virginia
- the Longleaf Pine National CRP CPA (see Exhibit 18).

CP36 may be enrolled on a continuous basis provided the following conditions are met:

- the offered acreage is on cropland and meets the eligibility requirement in paragraph 151
- the site is within the Longleaf Pine National CRP CPA (see Exhibit 18)
- the site is suitable for longleaf pine planting (soils and other site conditions)
- the practice is needed and feasible

Note:  The suitability of a soil for CP36 establishment may be determined by looking up that soil’s “Long Leaf Pine Suitability Indicator” in FSA’s Soil Database Management System. The Soil Database Management System may be accessed from FSA’s Intranet Application Page.

- the cumulative acres for all CP36 acreage enrolled in the State does not exceed the State’s allocation (see subparagraph 5 A).
National CRP Practices (Continued)

CP36  Longleaf Pine - Establishment (Continued)

C  State Acreage Allocation

*--Total acres enrolled shall not exceed 250,000 acres.--*

* * *

D  Payment Eligibility

The payment rate shall be the weighted average SRR for the 3 predominant soils of the offered acreage and the appropriate maintenance rate.

CRP-SIP’s and PIP’s are available for CP36. A one-time:

- up-front CRP-SIP will be issued after CRP-1 is approved and eligibility criteria is met
- CRP-PIP, equal to 40 percent of the eligible installation costs for certain practices on continuous CRP land, will be issued after CP36 is installed, eligible costs are verified, and other payment eligibility criteria are met.

Note:  CRP-PIP is in addition to the up to 50 percent C/S for eligible practice components.
National CRP Practices (Continued)

CP36  Longleaf Pine - Establishment (Continued)

E  C/S Policy

The following shows C/S policies for CP36.

National CRP Practices (Continued)

CP36  Longleaf Pine - Establishment (Continued)

F  Requirements

The following are requirements for CP36.

- Plantings **must** be protected from grazing by domestic livestock for the life of CRP-1.

- Chemicals used in performing the practice shall **not** include fertilizers and **must** be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

- The producer **must** control all noxious and invasive plants during the life of CRP-1.

G  Planting

Planting after CRP-1 is approved by COC shall be completed by the end of the next normal planting period unless the producer can provide acceptable documentation that seed or tree stock is **not** available.

H  Planting Timeframe

Herbicide residue related on some former cotton and peanut fields has reduced planting success for some longleaf pine planting.

Based on the recommendations provided by TSP, COC may allow the field to lay fallow during the first year of CRP-1 to reduce herbicide carryover.

TSP may recommend that permanent cover should be established during the first 2 years of CRP-1 according to paragraph 426. A 1-year extension of the 2-year planting requirement may be allowed by COC if there is justification of the need for an extension.

I  Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about CP36 specifications.
National CRP Practices (Continued)

CP36 Longleaf Pine - Establishment (Continued)

J Practice Maintenance

CP36 shall be maintained without additional C/S for the life of CRP-1. C/S shall be refunded if either of the following applies:

- the producer destroys the cover during the life of CRP-1
- the cover fails to adequately improve environmental benefits during the life of CRP-1 unless the failure is caused by circumstances beyond the producer’s control.

K Technical Responsibility

Technical responsibility for CP36 shall be assigned to NRCS, State Forester, or TSP. If a TSP representative is not available, responsibility may be redelegated to NRCS.

L Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

M Practice Length

The duration of CRP-1’s under CP36 are from 10 to 15 years.

N Mid CRP-1 Management

CP36 shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

SED shall consult with the State Technical Committee about options for required mid-contract management activities. These options may include prescribed burning, selective herbicide application, or other measure as appropriate to set back vegetative succession and woody encroachment. Management activities shall be used to maintain proper understory vegetative structure and composition.

C/S is authorized for mid CRP-1 management activities consistent with procedure.
CP36  Longleaf Pine - Establishment (Continued)

O  Density

The planting density for longleaf pine shall be a minimum of 400 trees per acre to a maximum of 600 trees per acre. The exact number of trees shall be based on the recommendation by TSP based on the unique site conditions that will provide significant wildlife benefits. Foresters shall consider ensuring sufficient ground cover that will provide:

- wildlife benefits
- a fuel source for fire.

State Technical Committees, along with FS and State foresters, shall be consulted in developing the site-by-site criteria used to develop planting density requirements.

P  Understory Regeneration

Natural regeneration may be allowed if all the following are met:

- NRCS or TSP determines both of the following:
  - an adequate seed source of approved understory species is present in the soil at the site
  - under normal conditions, the appropriate understory cover will be established within 2 years of CRP-1 effective date
- erosion and runoff will be controlled during the establishment period
- weeds, including noxious weeds, and other nonapproved plant species will be controlled during the establishment period
- COC shall not approve CRP-1 until all of the requirements are met
- COC shall ensure the producer is fully informed that:
  - no C/S will be paid for natural regeneration
  - if the approved cover is not established within 2 years of the CRP-1 effective date, the producer will be required to plant the approved cover with no C/S
  - as with all CRP-1’s, the control of all weeds, including noxious weeds, insects, and pests is a CRP participant contracted obligation
National CRP Practices (Continued)

CP36  Longleaf Pine - Establishment (Continued)

P  Understory Regeneration (Continued)

• the conservation plan signed by the producer requires all of the following:
  
  • the producer will plant the approved cover at no cost to FSA or CCC according to a revised conservation plan if the practice is not established through natural regeneration or planting within 2 years of CRP-1 effective date
  
  • NRCS or TSP shall spot check the site at the end of the 2nd year to determine whether the practice is established and meets the standards and specifications for NRCS conservation practice codes
  
  • weed control.

Note: FSA must immediately notify COC and the participant:

  • the result of the spot check
  
  • that the participant must plant the approved cover with no C/S according to a revised conservation plan, if applicable.

For understory vegetation, native cover established through natural regeneration may suffice for temporary cover. Technical determination on natural regeneration should be made by the technical agency responsible for development of the conservation plan, or if understory vegetation is to enhance, seeding commercially available native seed may supplement natural regeneration.

STC’s must develop natural regeneration requirements in consultation with the State Technical Committee. STC’s will work with the State Technical Committee to determine which native warm season grasses are appropriate for their State. If natural regeneration does not occur in the given 2-year time period, the producer will be required to establish native warm season grasses as specified by the State Technical Committee standards.

Wiregrass or other appropriate native warm season grasses providing similar benefits shall be established to provide:

• wildlife benefits
  
• fuel for prescribed burns.

Q  Prescribed Burning

The State Office shall consult with the State Technical Committee about options for required mid-contract management activities. If prescribed burning, selective herbicide application, and/or other measures are determined appropriate as mid-contract management, then C/S is authorized.
National CRP Practices (Continued)

CP37  Duck Nesting Habitat

A Purpose

This practice is to enhance duck nesting habitat on the most duck-productive areas of Iowa, Minnesota, Montana, North Dakota, and South Dakota to restore the functions and values of wetland ecosystems that have been devoted to agricultural use. The level of restoration of the wetland ecosystem shall be determined by the producer in consultation with FSA and NRCS or TSP.
CP37  Duck Nesting Habitat (Continued)

B  Application

Apply this practice to eligible wetlands and associated acreage that meet the following conditions:

- areas designated by FWS as having dense populations of duck pairs (greater than or equal to 25 breeding pairs per square mile)
- located outside the 100-year floodplain.

Note: The following map provides general areas that meet the density requirement.

The land must be suitable and adapted to the restoration of wetland functions and values. The restoration of wetland hydrology is only required to the extent specified by the producer.
CP37  Duck Nesting Habitat (Continued)

C  Cropland Associated to Noncropped Wetlands

Cropland that is associated to noncropped wetlands may be enrolled as part of the buffer for CP37. Noncropped wetland acreage is limited to the designated wetland area as determined by NRCS or TSP. Cropland immediately adjacent to noncropped wetlands that does not meet cropping history must not be included as part of either of the following:

- wetland acreage used to calculate the buffer acreage
- CRP-1.

The total cropland acreage associated to the noncropped wetland plus the upland buffer acreage associated to the farmed or cropped wetland shall not exceed a 10:1 buffer to wetland ratio. The noncropped wetland acreage will be used to calculate the total wetland acres when determining the maximum buffer for CP37.

Note: Noncropped wetlands are not eligible for enrollment into practice CP37.
National CRP Practices (Continued)

CP37  Duck Nesting Habitat (Continued)

C  Cropland Associated to Noncropped Wetlands (Continued)

**Example 1:** The offered acreage is located in an area that has a breeding duck potential of greater than 25 breeding pairs per square mile. The offered acreage has 2 acres of cropped wetlands and 1 acre of noncropped wetlands. The maximum amount of upland buffer that may be enrolled is 30 acres (3 acres of wetlands times a 10-acre buffer).

![Diagram of 30 Acre Buffer with 1 Acre Cropped Wetland and 1 Acre Noncropped Wetland]

**Example 2:** The offered acreage is located in an area that has a breeding duck potential of greater than 25 breeding pairs per square mile. The offered acreage has 5 acres of noncropped wetlands. Five acres of cropland immediately adjacent to the noncropped wetland does **not** meet the cropping history and is **not** part of the noncropped wetland acreage. The maximum amount of upland buffer that may be enrolled is 45 acres (5 acres of wetland times a 10-acre buffer minus 5 acres for the cropland not meeting cropping history).

**Note:** The cropland **not** meeting cropping history is **not** eligible for enrollment in CP37, but **must** be included as part of the conservation plan.

![Diagram of 45 Acre Buffer with 5 Acres Noncropped Wetland and 5 Acres Cropland Not Meeting Cropping History]
CP37  Duck Nesting Habitat (Continued)

D  Size Requirements

The amount of adjacent upland acreage to be enrolled shall be determined by FSA and NRCS or TSP. In areas designated by FWS as having greater than or equal to 25 duck pairs per square mile, the buffer to wetland acre ratio must be a:

- minimum of 4 to 1
- maximum 10 to 1.

E  C/S Eligibility

To be eligible for C/S, this practice shall:

- be included in the approved conservation plan
- be maintained for the life of CRP-1
- restore the functional capability and values of the wetland ecosystem to a level determined by the participant in consultation with FSA and NRCS or TSP, including the following:
  - preventing degradation of the wetland area and surrounding upland area from recurring
  - increasing sediment trapping efficiencies
  - improving surface and ground water quality
  - preventing excessive erosion from recurring
  - providing waterfowl and other wildlife habitat
  - reducing flood flows.
National CRP Practices (Continued)

CP37  Duck Nesting Habitat (Continued)

**F  State Allocations**

*Total enrollment shall not exceed 300,000 acres.*

* * *

**G  C/S Policy**

National CRP Practices (Continued)

CP37 Duck Nesting Habitat (Continued)

H Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Limit C/S to the minimum work and materials necessary to develop or restore the wetland hydrology and establish an adequate cover to improve environmental benefits.
- The wetland ecosystem shall be restored to the extent identified according to subparagraph B.
  
  Note: The level of restoration shall be determined by the producer in consultation with FSA and NRCS or TSP.

- Chemicals used in establishing the practice must be:
  
  - Federally, State, and locally registered
  
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.

- The practice must be established and maintained according to the practice standards in FOTG.

- The hydrology of the wetland must be maintained according to the operation and maintenance requirements for the practice standard.

- The practice shall have periodic mid-contract management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

I Practice Length

The practice length for CP37 is 10 to 15 years.
National CRP Practices (Continued)

CP37  Duck Nesting Habitat (Continued)

J  Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective
date of CRP-1. See paragraph 426 for exceptions.

K  Environmental Concerns

Consideration of wildlife, water quality, and other environmental concerns are to be evaluated in
the planning and establishment of this practice.

L  Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1 according to the
practice standards in FOTG.

C/S shall be refunded if any of the following apply:

• producer destroys the practice during the life of CRP-1

• producer fails to maintain the cover during the life of CRP-1

• the cover fails to provide adequate protection of water quality during the life of CRP-1,
  unless the failure is caused by circumstances beyond the producer’s control.

M  Management Activity

This practice shall have periodic management activities performed, according to the conservation
plan, during the life of CRP-1, as determined by COC. See paragraph 428

C/S is authorized for management activities.
**National CRP Practices (Continued)**

**CP37 Duck Nesting Habitat (Continued)**

**N Incentive to Restore Hydrology**

A one-time WRI payment equal to 25 percent of the cost of restoring the hydrology of the site is available to encourage the restoration of cropped wetlands only for CRP-1’s approved before November 3, 2008. WRI payment shall be:

- a separate payment from any applicable C/S
- issued according to 1-FI using program code “XXCRPWRI”
- issued upon certification of completion of practice
- equal to 25 percent of the cost of restoring the hydrology of the site.

**Exception:** WRI is **not** authorized for re-enrolled practices under continuous or FWP.

**Note:** Do **not** include the cost associated with establishing any associated acreage when calculating the one-time WRI payment.

Producers do **not** have to receive C/S to be eligible for the one-time WRI payment.

**O Technical Responsibility**

Technical responsibility for this practice shall be assigned to NRCS or TSP. For areas to be established to trees, FS or State Forestry agency shall have technical responsibility.
National CRP Practices (Continued)

CP38A Buffers

A Program Policy

Apply practices under CP38A to eligible lands where a specified habitat can be restored and maintained, as determined by the applicable State-developed practice standard.

CP38B Wetlands

A Program Policy

Apply practices under CP38B to eligible lands where a specified habitat can be restored and maintained, as determined by the applicable State-developed practice standard.

CP38C Trees

A Program Policy

Apply practices under CP38C to eligible lands where a specified habitat can be restored and maintained, as determined by the applicable State-developed practice standard.

CP38D Longleaf Pine

A Program Policy

Apply practices under CP38D to eligible lands where a specified habitat can be restored and maintained, as determined by the applicable State-developed practice standard.

CP38E Grass

A Program Policy

Apply practices under CP38E to eligible lands where a specified habitat can be restored and maintained, as determined by the applicable State-developed practice standard.
National Practices (Continued)

CP38A Filter Strips (CP21) – SAFE (Palouse)

A Purpose

The purpose of this practice is to remove nutrients, sediment, organic matter, pesticides, and other pollutants from surface runoff and subsurface flow by deposition, absorption, plant uptake, denitrification, and other processes, and thereby reduce pollution and protect surface water and subsurface water quality while enhancing the ecosystem of the water body.

B Program Policy

For cropland to be eligible to be enrolled in CRP to be devoted to CP21, both of the following must be met:

- COC determines both of the following:
- all cropland eligibility requirements in subparagraph 181 A are met
- the cropland offered is immediately adjacent and parallel to 1 of the following:
  - stream having perennial flow
  - seasonal stream

To be eligible for this practice under the SAFE (Palouse) project, the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of the eligible SAFE (Palouse) area.

Important: USGS maps shall not be solely used to determine seasonal streams. A seasonal stream is a stream that contains water for only part of the year but more than just during and/or after rainfall or snowmelt. Seasonal streams do not include:

- wetlands of any type
- land devoted to CP9
- terrace channels
- grass or sod waterways
- gullies
- narrow or wide wash
- roadside ditches
- well, spring, or seep
- marsh or swamp
- center pivot irrigation corners
- irrigation canals
- tail water recovery pit/system.

Note: See paragraph 181 for more information about seasonal and perennial streams.

- sinkholes and karst areas
- wetlands with water areas capable of reducing damages by sedimentation and associated pollutants that meet one of the following:
  - Permanently flooded water covers the land surface throughout the year in all years
National Practices (Continued)

CP38A Filter Strips (CP21) – SAFE (Palouse) (Continued)

- Intermittently exposed surface water is present throughout the year except in years of extreme drought
- Semi-permanently flooded surface water is present throughout the growing season in most years

**Note:** When surface water is absent, the water table is at or very near the land surface.

- Seasonally flooded surface water is present for extended periods of not less than 21 calendar days especially early in the growing season, but is absent by the end of the growing season in most years

**Note:** When surface water is absent, the water table is at or very near the land surface.

- other permanent water bodies, such as lakes and ponds, that provide water cover throughout the year in all years.

**Note:** Water bodies that do not provide permanent water cover throughout the year in all years are not eligible.

- NRCS determines, based on a site visit, all of the following:
  - the cropland is suitable to be devoted to a filter strip
  - the filter strip is needed and feasible to solve the resource concern
  - the cropland is capable, after the filter strip is established, of substantially reducing pollutants in the nearby eligible stream or other water body.

CP38A, Grass Filter Strip’s, are not eligible to be used in conjunction with the following practices:
- CP38A, Riparian Buffer
- CP38A, Wetland Restoration
- CP38A, Wetland Restoration, Non-Floodplain.

**C Size Requirements**

The minimum acceptable width of a filter strip is 20 feet. A filter strip may be applied up to a maximum average width of 120 feet, if needed to accomplish the purpose of the practice.

**Notes:** The maximum average width of filter strips established for any purpose other than protection and enhancement of water quality, shall not exceed 120 feet.

Infeasible-to-farm provisions may apply to CP21.

When the minimum design specification for water quality exceeds 120 feet, the minimum design specification is the maximum average width that may be enrolled. NRCS must document the need for a minimum design specification in excess of 120 feet in writing.
**National Practices (Continued)**

**CP38A Filter Strips (CP21) – SAFE (Palouse) (Continued)**

**Note:** NRCS will determine the documentation needed to support an additional average width for water quality purposes consistent with FOTG standards. The documentation must be in the case file.

**Example:** Producer offers to enroll land to be devoted to a 120 foot wide filter strip to protect the adjacent eligible stream. Based on the soils, slope, and other site conditions, NRCS documents that to address the water quality resource problem and to function properly, the filter strip must be a minimum of 145 feet in width. Because the purpose of the filter strip is the protection and enhancement of water quality, the minimum of width 145 feet may be enrolled. The 145 foot minimum width is the maximum acreage that may be enrolled.

The filter strip shall begin at the top of the stream bank. In some cases there may be land that is adjacent to the stream that does not meet the eligibility criteria to be enrolled in CRP. **This land shall not be enrolled in CRP.** However, if the eligible land is enrolled in CRP as a filter strip, the ineligible land shall be included:
- in the area used as a filter strip
- in the conservation plan
- when determining the width of the filter strip.

**D C/S Eligibility**

To be eligible for C/S, this practice shall:
- be required by the approved conservation plan
- meet the cropland history criteria
- improve environmental benefits to an acceptable level
- reduce additional sediment or pollutants that are being delivered to areas identified in subparagraph B
- be maintained for the contract payment period
- prevent degradation of environmental benefits from recurring.

**E C/S Policy**

This table contains C/S policies for this practice.

F Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply:

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1 unless grazing is incidental to the normal gleaning of the crop residue in the field according to subparagraph 720.
- Limit C/S to the minimum minerals and seed necessary to establish an adequate cover to improve environmental benefits.
- Practice shall reduce nutrients, sediment, organic matter, pesticides, and other pollutants that are being delivered to the areas identified in subparagraph B.
- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - Applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.
- The filter strip must be established and maintained according to the practice standards in FOTG.
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

Land planted to this practice under the SAFE (Palouse) project must meet the following requirements:

- Site preparation must provide a very clean field. Chemical fallowing for year 1 of the contract should be required if needed to achieve this.
- “Staged plantings” are recommended. Native vegetation is slow to establish. Establishing grasses first, followed by forbs and shrub planting in following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat. For example, the first two growing seasons would be utilized to plant and establish grass species and control broadleaf weeds. Temporary suppression of competition from existing vegetation should be done prior to inter-seeding or inter-planting native forbs and shrubs in the third season.
- “Island plantings” are recommended. After grass is established, a favorable option will be to plant forbs and/or shrubs in islands within the field in suitable sites instead of throughout the entire field. Plantings will be completed by inter-seeding seed and/or hand planting container plug stock. Since native forbs and shrubs are often expensive and a seed or seedling source is not always available, planting in islands around the field will allow for future dispersal of these species throughout the field.
National Practices (Continued)

CP38A Filter Strips (CP21) – SAFE (Palouse) (Continued)

- Forb strips and blocks, rather than planting across the entire acreage, is also allowed in accordance with WA Exhibit 4, page 1.1. This will aid in weed control and reduce the establishment cost for these species. Particular items to note in the WA Exhibit 4 procedure is the requirement to plant strips that are a minimum of 72 feet wide, limit these plantings to a minimum of 10 percent and maximum of 20 percent of the contract acreage, and use spot control to manage weeds in forb strips to reduce loss of desired native vegetation.

- Planting container plug stock can lead to better survival and establishment and thus may be more cost-effective than inter-seeding seed within restoration project sites in some cases. Prior to planting containerized native planting stock, existing vegetation will be temporarily suppressed to improve success of establishment.

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 to 36 months of the effective date of CRP-1.

H Environmental Concerns

Consideration of wildlife habitat, water quality and quantity, and other environmental concerns are to be evaluated in the planning and establishment of the protective measure.

I Practice Maintenance

This practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG.

C/S shall be refunded if either of the following applies:
- the producer destroys the practice during the contract period
- the cover fails to provide adequate protection of water quality during the practice lifespan, unless the failure is caused by circumstances beyond the producer’s control.

J Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428 and WA Exhibit 5.

Cost share is authorized for management activities.
National Practices (Continued)

CP38A Filter Strips (CP21) – SAFE (Palouse) (Continued)

Land planted to this practice under the SAFE (Palouse) project should utilize the following management activities:

- Stand mid-contract management practices are very important over the establishment period. Multiple management entries (beyond those typically utilized in non-SAFE plantings) may be scheduled in the conservation plan above normal CRP stand maintenance to improve native vegetation establishment success. Implementation must be done in accordance with 2-CRP provisions.
- Preferred mid-management practices include rotary clipping, clip and remove residue, controlled burning, light disking, inter-seeding, and multiple weed treatments.

K Technical Responsibility

NRCS or TSP shall have technical responsibility for this practice.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Palouse)

A Purposes

The purposes of this practice are to:

- remove nutrients, sediment, organic matter, pesticides, and other pollutants from surface runoff and subsurface flow by deposition, absorption, plant uptake, denitrification, and other processes, and thereby reduce pollution and protect surface water and subsurface water quality while enhancing the ecosystem of the water body
- create shade to lower water temperature to improve habitat for aquatic organisms
- provide a source of detritus and large woody debris for aquatic organisms and habitat for wildlife

B Program Policy

For cropland to be eligible to be enrolled in CRP to be devoted to CP38A Riparian Buffer, all of the following must be met:

- COC determines both of the following:
  - all cropland eligibility requirements in subparagraph 181 A are met
  - the cropland offered is immediately adjacent and parallel to one of the following:
    - stream having perennial flow
    - seasonal stream

**Important:** USGS maps shall not be solely used to determine seasonal streams. A seasonal stream is a stream that contains water for only part of the year but more than just during and/or after rainfall or snowmelt. Seasonal streams do not include:

- wetlands of any type
- land devoted to CP9
- terrace channels
- grass or sod waterways
- gullies
- narrow or wide wash
- roadside ditches
- well, spring, or seep
- marsh or swamp
- center pivot irrigation corners
- irrigation canals
- tail water recovery pit/system.

**Note:** See paragraph 181 for more information about seasonal and perennial streams.

- sinkholes and karst areas
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Palouse) (Continued)

- wetlands with water areas capable of reducing damages by sedimentation and associated pollutants that meet one of the following:
  - Permanently flooded water covers the land surface throughout the year in all years
  - Intermittently exposed surface water is present throughout the year except in years of extreme drought
  - Semi-permanently flooded surface water is present throughout the growing season in most years

  **Note:** When surface water is absent, the water table is at or very near the land surface.

- Seasonally flooded surface water is present for extended periods of not less than 21 calendar days especially early in the growing season, but is absent by the end of the growing season in most years

  **Note:** When surface water is absent, the water table is at or very near the land surface.

- other permanent water bodies, such as lakes and ponds, that provide water cover throughout the year in all years

  **Note:** Water bodies that do not provide permanent water cover throughout the year in all years are not eligible.

- NRCS or TSP determines, based on a site visit, all of the following:
  - the cropland is suitable to be devoted to a riparian buffer
  - the riparian buffer is needed and feasible to solve the resource concern
  - the cropland is capable, after the riparian buffer is established, of meeting the purposes in subparagraph A
  - Land that is not suitable for tree plantings, as determined by NRCS or TSP, is not eligible to be enrolled in CRP as a riparian buffer.

**Important:** Marginal pasture land is not eligible for enrollment in SAFE.

To be eligible for this practice under the SAFE (Palouse) projects the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of eligible SAFE (Palouse) areas.

CP38A, Riparian Buffers are not eligible to be used in conjunction with the following practices:
- CP38A, Grass Filter Strip
- CP38A, Wetland Restoration
- CP38A, Wetland Restoration, Non-Floodplain.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Palouse) (Continued)

C  Size Requirements

A riparian buffer shall not be less than 35 feet in width. The minimum acceptable combined width of zones 1 and 2 in a riparian buffer is the lesser of 100 feet or 30 percent of the geomorphic floodplain. An area of native grasses and forbs may be added, if otherwise eligible, only for concentrated flow conditions dependent on the site.

Excessive sheet-rill and concentrated flow will be controlled in areas immediately adjacent and up-gradient of the buffer. This area should be the minimum necessary to control excessive sheet-rill erosion and/or concentrated flow.

A riparian buffer may be applied up to a maximum average width of 180 feet, if needed to accomplish the purpose of the practice.

Notes: The maximum average width of riparian buffers established for any purpose other than protection and enhancement of water quality shall not exceed 180 feet.

Infeasible-to-farm provisions may apply to riparian buffers on cropland.

When the minimum design specification for water quality exceeds 180 feet, the minimum design specification is the maximum average width that may be enrolled. NRCS or TSP must document the need for a minimum design specification in excess of 180 feet in writing.

Note: NRCS will determine the documentation needed to support an additional average width for water quality purposes consistent with FOTG standards. The documentation must be in the case file.

Example: Producer offers to enroll cropland to be devoted to a 180 foot wide riparian buffer to protect the adjacent eligible stream. Based on the soils, slope, and other site conditions, NRCS documents that to address the water quality resource problem and to function properly, the riparian buffer needs to be a minimum of 200 feet in width. Because the purpose of the riparian buffer is the protection and enhancement of water quality, the minimum width of 200 feet may be enrolled. The 200 foot minimum width is the maximum acreage that may be enrolled.

The riparian buffer shall begin at the top of the stream bank. In some cases there may be land that is adjacent to the stream that does not meet the eligibility criteria to be enrolled in CRP. This land shall not be enrolled in CRP. However, if the eligible land is enrolled in CRP as a riparian buffer, the ineligible land shall be included:

- in the area used as a riparian buffer
- in the conservation plan
- when determining the width of the riparian buffer.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Palouse) (Continued)

The riparian forest buffer shall be positioned appropriately and designed to achieve sufficient width, length, and vertical structural-density to accomplish the intended purposes.

Dominant vegetation will consist of naturally regenerated or seeded/planted trees and shrubs suited to the soil and hydrology of the site to achieve the intended purposes.

Excessive sheet-rill and concentrated flow will be controlled. Concentrated flow and/or excessive sheet flow may be controlled through the use of a grass strip. The width of the strip should be the minimum necessary to achieve the intended purposes.

D C/S Eligibility

To be eligible for C/S, this practice shall:
• be required by the approved conservation plan
• be implemented on land that meets the cropland history criteria or marginal pastureland
• improve environmental benefits to less than the soil loss tolerance
• reduce additional nutrients, sediment, organic matter, or other pollutants that are being delivered to areas identified in subparagraph B
• be maintained for the contract payment period
• prevent degradation of environmental benefits from recurring.

Note: Use tree species that are native and non-invasive. Use high quality and adapted plant material.

E C/S Policy

This table shows C/S policies for this practice.

<td>authorized not to exceed an average cost, as determined by STC.</td>
</tr>
</tbody>
</table>

**Note:** STC must designate areas where use of such measures is warranted and cost-effective to protect seedlings. See subparagraph 491 D.

- streambank stabilization: Not authorized.
- minerals, nutrients, herbicides, and insecticides to maintain vegetative cover or enhance production
- seed, tree and shrub seedlings, seedbed preparation and seeding for use with natural regeneration
- minerals and nutrients
- temporary supplemental irrigation systems or plastic mulch
- clearing rocks or other obstructions from the area to be seeded

### F Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.
- The buffer shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Limit C/S to the minimum materials necessary to establish an adequate cover to improve environmental benefits.
- Acreage shall reduce nutrients, sediment, organic matter, pesticides, and other pollutants that are being delivered to the areas identified in subparagraph B.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Palouse) (Continued)

- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled.
- The riparian buffer must be established and maintained according to the practice standards in FOTG.
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

Land planted to this practice under SAFE (Palouse) project must meet the following requirements:

- Site preparation must provide a very clean field. Chemical fallowing for year 1 of the contract should be required if needed to achieve this.

- “Staged plantings” are recommended. Native vegetation is slow to establish. Establishing grasses first, followed by forb and shrub planting in following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat. For example, the first two growing seasons would be utilized to plant and establish grass species and control broadleaf weeds. Temporary suppression of competition from existing vegetation should be done prior to inter-seeding or inter-planting native forbs and shrubs in the third season.

- “Island plantings” are recommended. After grass is established, a favorable option will be to plant forbs and/or shrubs in islands within the field in suitable sites instead of throughout the entire field. Plantings will be completed by interseeding seed and/or hand planting container plug stock. Since native forbs and shrubs are often expensive and a seed or seedling source is not always available, planting in islands around the field will allow for future dispersal of these species throughout the field.

- Forb strips and blocks, rather than planting across the entire acreage, is also allowed in accordance with WA Exhibit 4, page 1.1. This will aid in weed control and reduce the establishment cost for these species. Particular items to note in the WA Exhibit 4 procedure is the requirement to plant strips that are a minimum of 72 feet wide, limit these plantings to a minimum of 10 percent and maximum of 20 percent of the contract acreage, and use spot control to manage weeds in forb strips to reduce loss of desired native vegetation. Minimum widths will be the minimum widths specified in the NRCS grass filter standard.

- Planting container plug stock can lead to better survival and establishment and thus may be more cost-effective than inter-seeding seed within restoration project sites in some cases. Prior to planting containerized native planting stock, existing vegetation will be temporarily suppressed to improve success of establishment.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Palouse) (Continued)

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 to 36 months of the effective date of CRP-1.

H Environmental Concerns

Consideration of wildlife habitat, water quality and quantity, and other environmental concerns are to be evaluated in the planning and establishment of the protective measure.

I Practice Maintenance

This practice shall be maintained without additional C/S for the life of the practice according to the practice standards in FOTG. C/S shall be refunded if either of the following applies:

- the producer destroys the practice during the contract period
- the cover fails to provide adequate protection of water quality during the practice lifespan, unless the failure is caused by circumstances beyond the producer’s control.

J Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428 and WA Exhibit 5. Cost share is authorized for management activities.

For land planted to this practice under the SAFE (Palouse) project, stand mid-contract management practices are very important over the establishment period. Multiple management entries (beyond those typically utilized in non-SAFE plantings) may be scheduled in the conservation plan to improve native vegetation establishment success. Implementation must be done in accordance with 2-CRP provisions.

K Technical Responsibility

Technical responsibility for this practice shall be assigned NRCS or TSP.
National Practices (Continued)

CP38B Wetland Restoration (CP23) – SAFE (Palouse)

A Purpose

The purpose of this practice is to restore the functions and values of wetland ecosystems that have been devoted to agricultural use. The level of restoration of the wetland ecosystem shall be determined by the producer in consultation with NRCS or TSP.

B Application

Apply this practice to eligible wetlands and associated acreage that are suitably located and adapted to the restoration of wetland functions and values. The restoration of wetland hydrology is only required to the extent specified by the producer.

To be eligible for this practice under the SAFE (Palouse) project, the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of the eligible SAFE (Palouse) area.

C Total Eligible Cropland Limit

Total eligible cropland for wetland restorations is limited to cropland:

- according to 2-CRP, paragraph 151
- within the 100 year floodplain of a permanent river or stream
- that includes a minimum of 51 percent hydric soils for the acreage offered (nonbuffer areas).

Note: An offer that includes a buffer outside the 100 year floodplain may be enrolled if otherwise eligible, needed, and feasible for the practice.

D Size Requirements

The amount of adjacent upland acreage to be enrolled shall be determined by NRCS. The amount of adjacent upland acres:

- is limited to the minimum number of acres required to provide a protective buffer to the cropped wetland and to enhance wildlife habitat
- may be less than the 3 to 1 ratio
- shall not exceed the 3 to 1 ratio.
National Practices (Continued)

CP38B Wetland Restoration (CP23) – SAFE (Palouse) (Continued)

E C/S Eligibility

To be eligible for C/S, this practice shall:
- be included in the approved conservation plan
- be maintained for the life of CRP-1
- restore the functional capability and values of the wetland ecosystem to a level determined by the participant in consultation with NRCS or TSP, including the following:
  - preventing degradation of the wetland area and surrounding upland area from recurring
  - increasing sediment trapping efficiencies
  - improving surface and ground water quality
  - preventing excessive erosion from recurring

- providing waterfowl and other wildlife habitat
- reducing flood flows.

F C/S Policy

### G Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Limit C/S to the minimum work and materials necessary to develop or restore the wetland hydrology, and establish an adequate cover to improve environmental benefits.
- The wetland ecosystem shall be restored to the extent identified according to subparagraph B.

**Note:** The level of restoration shall be determined by the producer in consultation with NRCS or TSP.
National Practices (Continued)

CP38B Wetland Restoration (CP23) – SAFE (Palouse) (Continued)

- Chemicals used in establishing the practice must be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.
- The practice must be established and maintained according to the practice standards in FOTG.
- The hydrology of the wetland must be maintained according to the operation and maintenance requirements for the practice standard.
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

Land planted to this practice under the SAFE (Palouse) project must meet the following requirements:

- Seed mixes are only those authorized in WA Exhibit 4, pages 41-49.
- Site preparation must provide a very clean field. Chemical fallowing for year 1 of the contract should be required if needed to achieve this.
- “Staged plantings” are recommended. Native vegetation is slow to establish. Establishing grasses first, followed by forb and shrub planting in following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat. For example, the first two growing seasons would be utilized to plant and establish grass species and control broadleaf weeds. Temporary suppression of competition from existing vegetation should be done prior to inter-seeding or inter-planting native forbs and shrubs in the third season.
- “Island plantings” are recommended. After grass is established, a favorable option will be to plant forbs and/or shrubs in islands within the field in suitable sites instead of throughout the entire field. Plantings will be completed by inter-seeding seed and/or hand planting container plug stock. Since native forbs and shrubs are often expensive and a seed or seedling source is not always available, planting in islands around the field will allow for future dispersal of these species throughout the field.
- Forb strips and blocks, rather than planting across the entire acreage, is also allowed in accordance with WA Exhibit 4, page 2. This will aid in weed control and reduce the establishment cost for these species. Particular items to note in the WA Exhibit 4 procedure is the requirement to plant strips that are a minimum of 72 feet wide, limit these plantings to a minimum of 10 percent and maximum of 20 percent of the contract acreage, and use spot control to manage weeds in forb strips to reduce loss of desired native vegetation.
National Practices (Continued)

CP38B Wetland Restoration (CP23) – SAFE (Palouse) (Continued)

- Planting container plug stock can lead to better survival and establishment and thus may be more cost-effective than inter-seeding seed within restoration project sites in some cases. Prior to planting containerized native planting stock, existing vegetation will be temporarily suppressed to improve success of establishment.

**H Planting Timespan**

Planting or sowing of the approved cover shall be completed within 12 to 36 months of the effective date of CRP-1.

**I Environmental Concerns**

Consideration of water quality, wildlife, and other environmental concerns are to be evaluated in the planning and establishment of this practice.

**J Practice Maintenance**

The practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG.

C/S shall be refunded if any of the following apply:

- producer destroys the practice during the life of CRP-1
- producer fails to maintain the cover during the life of CRP-1
- the cover fails to provide adequate protection of water quality during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.

**K Management Activity**

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428 and WA Exhibit 5.

C/S is authorized for management activities.

Land planted to this practice under CP38B for the SAFE (Palouse) project should utilize the following management activities:

- Stand mid-contract management practices are very important over the establishment period. Multiple management entries (beyond those typically utilized in non-SAFE plantings) may be scheduled in the conservation plan above normal CRP stand maintenance to improve native vegetation establishment success. Implementation must be done in accordance with 2-CRP provisions.
- Preferred mid-management practices include rotary clipping, clip and remove residue, controlled burning, light disking, inter-seeding, and multiple weed treatments.
National Practices (Continued)

CP38B Wetland Restoration (CP23) – SAFE (Palouse) (Continued)

L  Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National Practices (Continued)

CP38B Wetland Restoration, Non-Floodplain (CP23A) – SAFE (Palouse)

A Purpose

The purpose of this practice is to restore the functions and values of wetland ecosystems that have been devoted to agricultural use. The level of restoration of the wetland ecosystem shall be determined by the producer in consultation with NRCS or TSP.

B Application

Apply this practice to eligible wetlands and associated acreage that are any of the following:

- located outside the 100-year floodplain
- playa lakes
- land that is not eligible for enrollment in FWP. The land must be suitable and adapted to the restoration of wetland functions and values. The restoration of wetland hydrology is only required to the extent specified by the producer.

To be eligible for this practice under the SAFE (Palouse) project, the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of the eligible SAFE (Palouse) area.

C Size Requirements

The amount of adjacent upland acreage to be enrolled shall be determined by NRCS or TSP. The amount of adjacent upland acres:

- is limited to the minimum number of acres required to provide a protective buffer to the cropped wetland and to enhance wildlife habitat
- may be less than the 4 to 1 ratio
- shall not exceed the 4 to 1 ratio.

D C/S Eligibility

To be eligible for C/S, this practice shall:

- be included in the approved conservation plan
- be maintained for the life of CRP-1
- restore the functional capability and values of the wetland ecosystem to a level determined by the participant in consultation with NRCS or TSP, including the following:
  - preventing degradation of the wetland area and surrounding upland area from recurring
  - increasing sediment trapping efficiencies
  - improving surface and ground water quality
  - preventing excessive erosion from recurring
  - providing waterfowl and other wildlife habitat
  - reducing flood flows.

CP38B Wetland Restoration, Non-Floodplain (CP23A) – SAFE (Palouse) (Continued)

F Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Limit C/S to the minimum work and materials necessary to develop or restorer the wetland hydrology, and establish an adequate cover to improve environmental benefits.
- The wetland ecosystem shall be restored to the extent identified according to subparagraph B.

Note: The level of restoration shall be determined by the producer in consultation with NRCS or TSP.

- Chemicals used in establishing the practice must be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.
- The practice must be established and maintained according to the practice standards in FOTG.
- The hydrology of the wetland must be maintained according to the operation and maintenance requirements for the practice standard.
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

Land planted to this practice under the SAFE (Palouse) project must meet the following requirements:

- Site preparation must provide a very clean field. Chemical fallowing for year 1 of the contract should be required if needed to achieve this.

- “Staged plantings” are recommended. Native vegetation is slow to establish. Establishing grasses first, followed by forb and shrub planting in following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat. For example, the first two growing seasons would be utilized to plant and establish grass species and control broadleaf weeds. Temporary suppression of competition from existing vegetation should be done prior to inter-seeding or inter-planting native forbs and shrubs in the third season.

- “Island plantings” are recommended. After grass is established, a favorable option will be to plant forbs and/or shrubs in islands within the field in suitable sites instead of throughout the entire field. Plantings will be completed by inter-seeding seed and/or hand planting container plug stock. Since native forbs and shrubs are often expensive and a seed or seedling source is not always available, planting in islands around the field will allow for future dispersal of these species throughout the field.
National Practices (Continued)

CP38B Wetland Restoration, Non-Floodplain (CP23A) – SAFE (Palouse)

- Forb strips and blocks, rather than planting across the entire acreage, is also allowed in accordance with WA Exhibit 4, page 1.1. This will aid in weed control and reduce the establishment cost for these species. Particular items to note in the WA Exhibit 4 procedure is the requirement to plant strips that are a minimum of 72 feet wide, limit these plantings to a minimum of 10 percent and maximum of 20 percent of the contract acreage, and use spot control to manage weeds in forb strips to reduce loss of desired native vegetation.

- Planting container plug stock can lead to better survival and establishment and thus may be more cost-effective than inter-seeding seed within restoration project sites in some cases. Prior to planting containerized native planting stock, existing vegetation will be temporarily suppressed to improve success of establishment.

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 to 36 months of the effective date of CRP-1.

H Environmental Concerns

Consideration of water quality, wildlife, and other environmental concerns are to be evaluated in the planning and establishment of this practice.

I Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG.

C/S shall be refunded if any of the following apply:

- producer destroys the practice during the life of CRP-1
- producer fails to maintain the cover during the life of CRP-1
- the cover fails to provide adequate protection of water quality during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.

J Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428 and WA Exhibit 5. C/S is authorized for management activities.
National Practices (Continued)

CP38B Wetland Restoration, Non-Floodplain (CP23A) – SAFE (Palouse)

Land planted to this practice under SAFE (Palouse) project should utilize the following management activities:

- Stand mid-contract management practices are very important over the establishment period. Multiple management entries (beyond those typically utilized in non-SAFE plantings) may be scheduled in the conservation plan above normal CRP stand maintenance to improve native vegetation establishment success. Implementation shall be done in accordance with 2-CRP provisions.

- Preferred mid-management practices include rotary clipping, clip and remove residue, controlled burning, light disking, inter-seeding, and multiple weed treatments.

K  Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP38E Establishment of Permanent Native Grasses (CP2) – SAFE (Palouse)

A Purpose

The purpose of this practice is to establish a vegetative cover of native grasses on eligible cropland that will enhance environmental benefits.

B Program Policy

Apply this practice to establish permanent native grass species on eligible cropland.

C Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the life of CRP-1
- be included in the approved conservation plan.

To be eligible for this practice under the SAFE (Palouse) project, the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of eligible SAFE areas.

E Requirements

The following are requirements for this practice.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Limit C/S to the minimum minerals and seed necessary to establish an adequate cover to improve environmental benefits.
- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

Land planted to this practice under SAFE (Palouse) project must meet the following requirements:

- Site preparation must provide a very clean seedbed. Chemical fallowing for year 1 of the contract should be required if needed to achieve this.

- “Staged plantings” are recommended. Native vegetation is slow to establish. Establishing grasses first, followed by forb and shrub planting in following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat. For example, the first two growing seasons would be utilized to plant and establish grass species and control broadleaf weeds. Temporary suppression of competition from existing vegetation should be done prior to inter-seeding or inter-planting native forbs and shrubs in the third season.
National CRP Practices (Continued)

CP38E Establishment of Permanent Native Grasses (CP2) – SAFE (Palouse) (Continued)

• “Island plantings” are recommended. After grass is established, a favorable option will be to plant forbs and/or shrubs in islands within the field in suitable sites instead of throughout the entire field. Plantings will be completed by inter-seeding seed and/or hand planting container plug stock. Since native forbs and shrubs are often expensive and a seed or seedling source is not always available, planting in islands around the field will allow for future dispersal of these species throughout the field.

• Forb strips and blocks, rather than planting across the entire acreage, is also allowed in accordance with WA Exhibit 4, page 2. This will aid in weed control and reduce the establishment cost for these species. Particular items to note in the WA Exhibit 4 procedure is the requirement to plant strips that are a minimum of 72 feet wide, limit these plantings to a minimum of 10 percent and maximum of 20 percent of the contract acreage, and use spot control to manage weeds in forb strips to reduce loss of desired native vegetation.

• Planting container plug stock can lead to better survival and establishment and thus may be more cost-effective than inter-seeding seed within restoration project sites in some cases. Prior to planting containerized native planting stock, existing vegetation will be temporarily suppressed to improve success of establishment.

F Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 to 36 months of the effective date of CRP-1.

G Environmental Concerns

Consider wildlife and other environmental concerns when establishing the protective measure.

H Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1. C/S shall be refunded if either of the following applies:

• producer destroys the cover during its lifespan
• cover fails to provide enhancement of environmental benefits during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.
**National CRP Practices (Continued)**

**CP38E Establishment of Permanent Native Grasses (CP2) – SAFE (Palouse) (Continued)**

**I Management Activity**

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428 and WA Exhibit 5.

Cost share is authorized for management activities.

Land planted to this practice under the SAFE (Palouse) project should utilize the following management activities:

- Stand mid-contract management practices are very important over the establishment period. Multiple management entries (beyond those typically utilized in non-SAFE plantings) may be scheduled in the conservation plan above normal CRP stand maintenance to improve native vegetation establishment success. Implementation must be done in accordance with 2-CRP provisions.

- Preferred mid-management practices include rotary clipping, clip and remove residue, controlled burning, light disking, inter-seeding, and multiple weed treatments.

**J Technical Responsibility**

NRCS or TSP shall have technical responsibility for this practice.
National CRP Practices (Continued)

CP38E Permanent Wildlife Habitat (CP4D) – SAFE (Palouse)

A Purpose

The purpose of this practice is to establish a permanent wildlife habitat cover to enhance environmental benefits for the wildlife habitat of the designated or surrounding areas.

B Program Policy

Apply this practice to eligible cropland that is suitably located and adapted to the establishment of permanent wildlife habitat.

A wildlife conservation plan must be developed for acreage under CRP-1 devoted to CP38E, Permanent Wildlife Habitat.

C Eligibility

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the CRP-1 period
- be included in the approved conservation plan
- include woody vegetation as determined appropriate by STC in consultation with the State Technical Committee.

To be eligible for this practice under the SAFE (Palouse) project, the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of eligible SAFE (Palouse) areas.

E Requirements

The following are requirements for this practice.

- Limit C/S to the minimum minerals and seeds necessary to establish an adequate cover for permanent wildlife habitat.
- Plantings must be protected from destructive fire and shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Chemicals used in performing CP38E (Palouse) must be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.
A wildlife conservation plan must be developed for acreage under CRP-1 devoted to CP38E (Palouse).

The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

Land planted to this practice under CP38E for the SAFE (Palouse) project must meet the following requirements:

- Site preparation must provide a very clean field. Chemical fallowing for year 1 of the contract should be required if needed to achieve this.

- “Staged plantings” are recommended. Native vegetation is slow to establish. Establishing grasses first, followed by forb and shrub planting in following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat. For example, the first two growing seasons would be utilized to plant and establish grass species and control broadleaf weeds. Temporary suppression of competition from existing vegetation should be done prior to inter-seeding or inter-planting native forbs and shrubs in the third season.

- “Island plantings” are recommended. After grass is established, a favorable option will be to plant forbs and/or shrubs in islands within the field in suitable sites instead of throughout the entire field. Plantings will be completed by inter-seeding seed and/or hand planting container plug stock. Since native forbs and shrubs are often expensive and a seed or seedling source is not always available, planting in islands around the field will allow for future dispersal of these species throughout the field.

- Forb strips and blocks, rather than planting across the entire acreage, is also allowed in accordance with WA Exhibit 4, page 2. This will aid in weed control and reduce the establishment cost for these species. Particular items to note in the WA Exhibit 4 procedure is the requirement to plant strips that are a minimum of 72 feet wide, limit these plantings to a minimum of 10 percent and maximum of 20 percent of the contract acreage, and use spot control to manage weeds in forb strips to reduce loss of desired native vegetation.

- Planting container plug stock can lead to better survival and establishment and thus may be more cost-effective than inter-seeding seed within restoration project sites in some cases. Prior to planting containerized native planting stock, existing vegetation will be temporarily suppressed to improve success of establishment.

F Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 to 36 months of the effective date of CRP-1.
National CRP Practices (Continued)

CP38E Permanent Wildlife Habitat (CP4D) – SAFE (Palouse) (Continued)

G Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about types of plantings, spacing, and other practice specifications.

H Practice Maintenance

The practice shall be maintained without additional C/S for the CRP-1 period. C/S shall be refunded if:

- producer destroys the cover during the CRP-1 period
- cover fails to provide enhancement of environmental benefits during the practice lifespan, unless caused by circumstances beyond the producer’s control.

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428 and WA Exhibit 5.

Cost share is authorized for management activities.

Land planted to this practice under the SAFE (Palouse) project should utilize the following management activities:

- Stand mid-contract management practices are very important over the establishment period. Multiple management entries (beyond those typically utilized in non-SAFE plantings) may be scheduled in the conservation plan above normal CRP stand maintenance to improve native vegetation establishment success. Implementation must be done in accordance with 2-CRP provisions.

- Preferred mid-management practices include rotary clipping, clip and remove residue, controlled burning, light disking, inter-seeding, and multiple weed treatments.

J Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP38E Wildlife Food Plot (CP12) – SAFE (Palouse)

A Purpose

The purpose of this practice is to establish annual or perennial wildlife food plots that will enhance:

- wildlife
- wildlife habitat.

B Program Policy

Apply this practice to CRP land that is suitably located and adapted to the establishment of annual or perennial wildlife food plots.

To be eligible for this practice under the SAFE (Palouse) project, the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of eligible SAFE (Palouse) areas.

C Objectives

This practice shall:

- enhance wildlife, wildlife habitat, or both
- improve environmental benefits below the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be included in the approved conservation plan
- be carried out as specified in the approved conservation plan.

D C/S Policy

C/S is not authorized for this practice.

E Requirements

The following are requirements for this practice:

- Use the NRCS standards and specifications for wildlife upland or wetland habitat management for the desired wildlife species to:
  - establish suitable plant species for food plots
  - determine food plot location
  - determine total acres to be devoted to food plots.
- Individual food plots shall not exceed 5 acres in size and shall not be immediately adjacent.
- Food plots must be separated by a sufficient distance to maximize wildlife benefits and accessibility.
- This practice may be used in conjunction on with other CP38E practices.

Note: The practice used in conjunction with CP12 determines the length of CRP-1. CP12’s must be the same length of the practice used in conjunction with CP12.
Exhibit 11

National CRP Practices (Continued)

CP38E Wildlife Food Plot (CP12) – SAFE (Palouse) (Continued)

• Food plots may be at one location throughout the life of CRP-1 or may be relocated each year. If relocated, the previous food plot must be seeded to an approved permanent vegetative cover at the producer’s expense.
• Minerals necessary to ensure establishment of a successful food plot shall be applied.
• During installation, degradation of environmental benefits shall be kept on an acceptable level. For example, using no-till seeding.
• Food plots shall be planted in the areas of CRP acreage that:
  • minimize adversity to environmental benefits
  • maximize wildlife benefits and accessibility.
• Chemicals used in performing this practice must be:
  • Federally, State, and locally registered
  • applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
• Participants who enroll land under practice CP12 must maintain the CP12 acreage in this practice for the life of the contract.
• For CP38E Wildlife Food Plot acreage planted to annual crops:
  • After establishment, the crop should be left standing through the winter or at least until the first of March of the following year. Depending on its condition, it may be left standing through the spring and replanted in the late spring or early summer.
  • All of the required acreage must have enough plant materials to provide an adequate food source each year, however, all the acreage does not need to be planted every year.

Example: Producer A plants 5.0 acres of corn in 2008. If there is still an adequate amount of food in the corn in 2009, 2.5 acres of the corn may be left standing and 2.5 acres may be planted to wheat. In 2010, the 2.5 acres in corn must be replanted. If there is still an adequate amount of wheat, the 2.5 acres may be left standing until 2011.

Contact the local NRCS or Washington Department of Fish and Wildlife to determine what constitutes an adequate amount of food to allow the crop to remain for a second year.

F  CRP-1 Revisions

Existing CRP-1’s may be revised to include planting wildlife food plots if:
• determined necessary and feasible by TSP
• included in the approved conservation plan.

Note: Adding a food plot to an existing CRP-1 does not extend the length of CRP-1.
National CRP Practices (Continued)

CP38E Wildlife Food Plot (CP12) – SAFE (Palouse) (Continued)

G Program Development

The county practice shall identify the eligible species and provide any requirements, such as:
• spacing
• minimum planting per acres
• site preparation
• cultivation.

Approved planting methods may be included or incorporated by reference to published technical standards.

H Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP38E Rare and Declining Habitat (CP25) – SAFE (Palouse)

A Purpose

The purpose of this practice is to restore the functions and values of critically endangered, endangered, and threatened habitats. The extent of the restoration is determined by the specifications developed at the State level.

The only habitat type eligible for restoration under the SAFE (Palouse) is Palouse prairie.

B Program Policy

Apply this practice to eligible lands where the specified habitat can be restored and maintained, as determined by NRCS technical specifications, in a cost-effective manner through enrollment in CRP.

Notes: NRCS technical restoration specifications shall be developed in consultation with the State Technical Committee.

Technical expertise from other Federal and State agencies and/or private organizations is encouraged to assist with habitat establishment and long-term management of the restored habitats.

C Eligibility

To be eligible for C/S, this practice shall:

• improve environmental benefits to less than the soil loss tolerance
• prevent degradation of environmental benefits from recurring
• be maintained for the CRP-1 period
• be required by the approved conservation plan
• be implemented on eligible lands where the rare and declining habitat can be restored in a cost-effective manner through enrollment in CRP
• restore the native vegetative components and functions, and values of rare and declining wildlife habitats to a level determined by the specifications developed at the State level and approved by DAFP.

Note: Cost share shall not exceed 50 percent of the price at which the land placed in CRP could be sold for use as farmland at the time at which CRP-1 is signed by the producer. See paragraph 491 B.

To be eligible for this practice under the SAFE (Palouse) project, the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of the eligible SAFE (Palouse) area.

| Tree tubes, plastic mulch, and temporary irrigation systems | in arid areas where needed to establish a tree planting, as determined by the designated technician and stated as needed in the technical specifications submitted for review and in the approved conservation plan |                |
| Earthmoving           | to construct dams, levees, dugouts, or dikes needed to develop or restore the hydrology of the site and specified as necessary during practice establishment in the approved conservation plan |                |
E Requirements

The following are the requirements for this practice.

- Limit C/S to the minimum minerals and seed necessary to restore the rare and declining habitat vegetative characteristics, as provided by the State specific restoration specifications.
- Acreage must be maintained according to the conservation plan for the life of CRP-1.
- The acreage enrolled shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- The size of the acreage established should be of sufficient size and location on the landscape as to meet the purpose of the practice.
- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

Land planted to this practice under the SAFE (Palouse) project must meet the following requirements:

- Site preparation must provide a very clean field. Chemical fallowing for year 1 of the contract should be required if needed to achieve this.
- “Staged plantings” are recommended. Native vegetation is slow to establish. Establishing grasses first, followed by forb and shrub planting in following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat. For example, the first two growing seasons would be utilized to plant and establish grass species and control broadleaf weeds. Temporary suppression of competition from existing vegetation should be done prior to inter-seeding or inter-planting native forbs and shrubs in the third season.
Exhibit 11

National CRP Practices (Continued)

CP38E Rare and Declining Habitat (CP25) – SAFE (Palouse) (Continued)

- “Island plantings” are recommended. After grass is established, a favorable option will be to plant forbs and/or shrubs in islands within the field in suitable sites instead of throughout the entire field. Plantings will be completed by inter-seeding seed and/or hand planting container plug stock. Since native forbs and shrubs are often expensive and a seed or seedling source is not always available, planting in islands around the field will allow for future dispersal of these species throughout the field.

- Forb strips and blocks, rather than planting across the entire acreage, is also allowed in accordance with WA Exhibit 4, page 2. This will aid in weed control and reduce the establishment cost for these species. Particular items to note in the WA Exhibit 4 procedure is the requirement to plant strips that are a minimum of 72 feet wide, limit these plantings to a minimum of 10 percent and maximum of 20 percent of the contract acreage, and use spot control to manage weeds in forb strips to reduce loss of desired native vegetation.

- Planting container plug stock can lead to better survival and establishment and thus may be more cost-effective than inter-seeding seed within restoration project sites in some cases. Prior to planting containerized native planting stock, existing vegetation will be temporarily suppressed to improve success of establishment.

F Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 to 36 months of the effective date of CRP-1.

G Environmental Concerns

Restoration of critically endangered, endangered, and threatened habitats is the primary consideration when making determinations about types of plantings, spacing, and other practice specifications. Consider preserving and improving the surrounding environment when making determinations about seed varieties and other practice specifications.

H Practice Maintenance

The practice shall be maintained without additional C/S for the CRP-1 period. C/S shall be refunded if:

- producer destroys the cover during the CRP-1 period
- restoration fails to meet the goals of the practice during the practice lifespan, unless caused by circumstances beyond the producer’s control
- cover fails, unless caused by circumstances beyond the producer’s control.
National CRP Practices (Continued)

CP38E Rare and Declining Habitat (CP25) – SAFE (Palouse) (Continued)

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428 and WA Exhibit 5.

Cost share is authorized for management activities.

Land planted to this practice under CP38E for the SAFE (Palouse) project should utilize the following management activities:

- Stand mid-contract management practices are very important over the establishment period. Multiple management entries (beyond those typically utilized in non-SAFE plantings) may be scheduled in the conservation plan above normal CRP stand maintenance to improve native vegetation establishment success. Implementation shall be done in accordance with 2-CRP provisions.

- Preferred mid-management practices include rotary clipping, clip and remove residue, controlled burning, light disking, inter-seeding, and multiple weed treatments.

J Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Shrub-Steppe)

A Purposes

The purposes of this practice are to:

• remove nutrients, sediment, organic matter, pesticides, and other pollutants from surface runoff and subsurface flow by deposition, absorption, plant uptake, denitrification, and other processes, and thereby reduce pollution and protect surface water and subsurface water quality while enhancing the ecosystem of the water body
• create shade to lower water temperature to improve habitat for aquatic organisms
• provide a source of detritus and large woody debris for aquatic organisms and habitat for wildlife

B Program Policy

To be eligible for this practice under the SAFE (Shrub-Steppe) projects the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of eligible SAFE (Shrub-Steppe) areas. Seventy-five percent of the offered parcel must be within a ½ mile buffer around identified shrub-steppe habitat.

For cropland to be eligible to be enrolled in CRP to be devoted to CP38A Riparian Buffer, all of the following must be met:

• COC determines both of the following:
  • all cropland eligibility requirements in subparagraph 181 A are met
  • the cropland offered is immediately adjacent and parallel to one of the following:
    • stream having perennial flow
    • seasonal stream

Important: USGS maps shall not be solely used to determine seasonal streams. A seasonal stream is a stream that contains water for only part of the year but more than just during and/or after rainfall or snowmelt. Seasonal streams do not include:

• wetlands of any type
• land devoted to CP9
• terrace channels
• grass or sod waterways
• gullies
• narrow or wide wash
• roadside ditches
• well, spring, or seep
• marsh or swamp
• center pivot irrigation corners
• irrigation canals
• tail water recovery pit/system.

Note: See paragraph 181 for more information about seasonal and perennial streams.
sinkholes and karst areas
wetlands with water areas capable of reducing damages by sedimentation and associated pollutants that meet one of the following:
• Permanently flooded water covers the land surface throughout the year in all years
• Intermittently exposed surface water is present throughout the year except in years of extreme drought
• Semi-permanently flooded surface water is present throughout the growing season in most years

Note: When surface water is absent, the water table is at or very near the land surface.

Seasonally flooded surface water is present for extended periods of not less than 21 calendar days especially early in the growing season, but is absent by the end of the growing season in most years

Note: When surface water is absent, the water table is at or very near the land surface.

other permanent water bodies, such as lakes and ponds, that provide water cover throughout the year in all years

Note: Water bodies that do not provide permanent water cover throughout the year in all years are not eligible.

NRCS or TSP determines, based on a site visit, all of the following:
• the cropland is suitable to be devoted to a riparian buffer
• the riparian buffer is needed and feasible to solve the resource concern
• the cropland is capable, after the riparian buffer is established, of meeting the purposes in subparagraph A
• Land that is not suitable for tree plantings, as determined by NRCS or TSP, is not eligible to be enrolled in CRP as a riparian buffer.

Important: Marginal pasture land is not eligible for enrollment in SAFE.

CP38A, Riparian Buffers are not eligible to be used in conjunction with the following practices:
• CP38A, Grass Filter Strip
• CP38A, Wetland Restoration
• CP38A, Wetland Restoration, Non-Floodplain.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Shrub-Steppe) (Continued)

C  Size Requirements

A riparian buffer shall not be less than 35 feet in width. The minimum acceptable combined width of zones 1 and 2 in a riparian buffer is the lesser of 100 feet or 30 percent of the geomorphic floodplain. An area of native grasses and forbs may be added, if otherwise eligible, only for concentrated flow conditions dependent on the site.

Excessive sheet-rill and concentrated flow will be controlled in areas immediately adjacent and up-gradient of the buffer. This area should be the minimum necessary to control excessive sheet-rill erosion and/or concentrated flow.

A riparian buffer may be applied up to a maximum average width of 180 feet, if needed to accomplish the purpose of the practice.

Notes: The maximum average width of riparian buffers established for any purpose other than protection and enhancement of water quality shall not exceed 180 feet.

Infeasible-to-farm provisions may apply to riparian buffers on cropland.

When the minimum design specification for water quality exceeds 180 feet, the minimum design specification is the maximum average width that may be enrolled. NRCS or TSP must document the need for a minimum design specification in excess of 180 feet in writing.

Note: NRCS will determine the documentation needed to support an additional average width for water quality purposes consistent with FOTG standards. The documentation must be in the case file.

Example: Producer offers to enroll cropland to be devoted to a 180 foot wide riparian buffer to protect the adjacent eligible stream. Based on the soils, slope, and other site conditions, NRCS documents that to address the water quality resource problem and to function properly, the riparian buffer needs to be a minimum of 200 feet in width. Because the purpose of the riparian buffer is the protection and enhancement of water quality, the minimum width of 200 feet may be enrolled. The 200 foot minimum width is the maximum acreage that may be enrolled.

The riparian buffer shall begin at the top of the stream bank. In some cases there may be land that is adjacent to the stream that does not meet the eligibility criteria to be enrolled in CRP. This land shall not be enrolled in CRP. However, if the eligible land is enrolled in CRP as a riparian buffer, the ineligible land shall be included:

• in the area used as a riparian buffer
• in the conservation plan
• when determining the width of the riparian buffer.
CP38A Riparian Buffer (CP22) – SAFE (Shrub-Steppe) (Continued)

The riparian forest buffer shall be positioned appropriately and designed to achieve sufficient width, length, and vertical structural-density to accomplish the intended purposes.

Dominant vegetation will consist of naturally regenerated or seeded/planted trees and shrubs suited to the soil and hydrology of the site to achieve the intended purposes.

Excessive sheet-rill and concentrated flow will be controlled. Concentrated flow and/or excessive sheet flow may be controlled through the use of a grass strip. The width of the strip should be the minimum necessary to achieve the intended purposes.

D C/S Eligibility

To be eligible for C/S, this practice shall:

• be required by the approved conservation plan
• be implemented on land that meets the cropland history criteria or marginal pastureland
• improve environmental benefits to less than the soil loss tolerance
• reduce additional nutrients, sediment, organic matter, or other pollutants that are being delivered to areas identified in subparagraph B
• be maintained for the contract payment period
• prevent degradation of environmental benefits from recurring.

Note: Use tree species that are native and non-invasive. Use high quality and adapted plant material.

E C/S Policy

F Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply:

- The buffer shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Limit C/S to the minimum materials necessary to establish an adequate cover to improve environmental benefits.
- Acreage shall reduce nutrients, sediment, organic matter, pesticides, and other pollutants that are being delivered to the areas identified in subparagraph B.
- Chemicals used in performing the practice must be
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled.
- The riparian buffer must be established and maintained according to the practice standards in FOTG.
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Shrub-Steppe) (Continued)

Land planted to this practice under SAFE (Shrub-Steppe) project must meet the following requirements:

- Site preparation must provide a very clean field. Chemical fallowing for year 1 of the contract should be required if needed to achieve this.

- “Staged plantings” are recommended. Native vegetation is slow to establish. Establishing grasses first, followed by forb and shrub planting in following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat. For example, the first two growing seasons would be utilized to plant and establish grass species and control broadleaf weeds. Temporary suppression of competition from existing vegetation should be done prior to inter-seeding or inter-planting native forbs and shrubs in the third season.

- “Island plantings” are recommended. After grass is established, a favorable option will be to plant forbs and/or shrubs in islands within the field in suitable sites instead of throughout the entire field. Plantings will be completed by inter-seeding seed and/or hand planting container plug stock. Since native forbs and shrubs are often expensive and a seed or seedling source is not always available, planting in islands around the field will allow for future dispersal of these species throughout the field.

- Forb strips and blocks, rather than planting across the entire acreage, is also allowed in accordance with WA Exhibit 4, page 2. This will aid in weed control and reduce the establishment cost for these species. Particular items to note in the WA Exhibit 4 procedure is the requirement to plant strips that are a minimum of 72 feet wide, limit these plantings to a minimum of 10 percent and maximum of 20 percent of the contract acreage, and use spot control to manage weeds in forb strips to reduce loss of desired native vegetation. Minimum widths will be the minimum widths specified in the NRCS grass filter standard.

- Planting container plug stock can lead to better survival and establishment and thus may be more cost-effective than inter-seeding seed within restoration project sites in some cases. Prior to planting containerized native planting stock, existing vegetation will be temporarily suppressed to improve success of establishment.

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 to 36 months of the effective date of CRP-1.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Shrub-Steppe) (Continued)

H Environmental Concerns

Consideration of wildlife habitat, water quality and quantity, and other environmental concerns are to be evaluated in the planning and establishment of the protective measure.

I Practice Maintenance

This practice shall be maintained without additional C/S for the life of the practice according to the practice standards in FOTG. C/S shall be refunded if either of the following applies:

- the producer destroys the practice during the contract period
- the cover fails to provide adequate protection of water quality during the practice lifespan, unless the failure is caused by circumstances beyond the producer’s control.

J Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428 and WA Exhibit 5. Cost share is authorized for management activities.

For land planted to this practice under the SAFE (Shrub-Steppe) project, stand mid-contract management practices are very important over the establishment period. Multiple management entries (beyond those typically utilized in non-SAFE plantings) may be scheduled in the conservation plan to improve native vegetation establishment success. Implementation must be done in accordance with 2-CRP provisions.

K Technical Responsibility

Technical responsibility for this practice shall be assigned NRCS or TSP.
CP38E Permanent Wildlife Habitat (CP4D) – SAFE (Shrub-Steppe)

A Purpose

The purpose of this practice is to establish a permanent wildlife habitat cover to enhance environmental benefits for the wildlife habitat of the designated or surrounding areas.

B Program Policy

Apply this practice to eligible cropland that is suitably located and adapted to the establishment of permanent wildlife habitat.

A wildlife conservation plan must be developed for acreage under CRP-1 devoted to CP38E, Permanent Wildlife Habitat.

C Eligibility

To be eligible for this practice under the SAFE (Shrub-Steppe) project, the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of eligible SAFE (Shrub-Steppe) areas. Seventy-five percent of the offered parcel must be within a ½ mile buffer around identified shrub-steppe habitat.

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the CRP-1 period
- be included in the approved conservation plan
- include woody vegetation as determined appropriate by STC in consultation with the State Technical Committee.

E  Requirements

The following are requirements for this practice.

- Limit C/S to the minimum minerals and seeds necessary to establish an adequate cover for permanent wildlife habitat.
- Plantings must be protected from destructive fire and shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Chemicals used in performing CP38E (Shrub-Steppe) must be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.
CP38E Permanent Wildlife Habitat (CP4D) – SAFE (Shrub-Steppe) (Continued)

- A wildlife conservation plan must be developed for acreage under CRP-1 devoted to CP38E (Shrub-Steppe).
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

Land planted to this practice under CP38E for the SAFE (Shrub-Steppe) project must meet the following requirements:

- Site preparation must provide a very clean field. Chemical fallowing for year 1 of the contract should be required if needed to achieve this.

- “Staged plantings” are recommended. Native vegetation is slow to establish. Establishing grasses first, followed by forb and shrub planting in following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat. For example, the first two growing seasons would be utilized to plant and establish grass species and control broadleaf weeds. Temporary suppression of competition from existing vegetation should be done prior to inter-seeding or inter-planting native forbs and shrubs in the third season.

- “Island plantings” are recommended. After grass is established, a favorable option will be to plant forbs and/or shrubs in islands within the field in suitable sites instead of throughout the entire field. Plantings will be completed by inter-seeding seed and/or hand planting container plug stock. Since native forbs and shrubs are often expensive and a seed or seedling source is not always available, planting in islands around the field will allow for future dispersal of these species throughout the field.

- Forb strips and blocks, rather than planting across the entire acreage, is also allowed in accordance with WA Exhibit 4, page 2. This will aid in weed control and reduce the establishment cost for these species. Particular items to note in the WA Exhibit 4 procedure is the requirement to plant strips that are a minimum of 72 feet wide, limit these plantings to a minimum of 10 percent and maximum of 20 percent of the contract acreage, and use spot control to manage weeds in forb strips to reduce loss of desired native vegetation.

- Planting container plug stock can lead to better survival and establishment and thus may be more cost-effective than inter-seeding seed within restoration project sites in some cases. Prior to planting containerized native planting stock, existing vegetation will be temporarily suppressed to improve success of establishment.

F Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 to 36 months of the effective date of CRP-1.
CP38E Permanent Wildlife Habitat (CP4D) – SAFE (Shrub-Steppe) (Continued)

G Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about types of plantings, spacing, and other practice specifications.

H Practice Maintenance

The practice shall be maintained without additional C/S for the CRP-1 period. C/S shall be refunded if:
- producer destroys the cover during the CRP-1 period
- cover fails to provide enhancement of environmental benefits during the practice lifespan, unless caused by circumstances beyond the producer’s control.

I Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428 and WA Exhibit 5.

Cost share is authorized for management activities.

Land planted to this practice under the SAFE (Shrub-Steppe) project should utilize the following management activities:

- Stand mid-contract management practices are very important over the establishment period. Multiple management entries (beyond those typically utilized in non-SAFE plantings) may be scheduled in the conservation plan above normal CRP stand maintenance to improve native vegetation establishment success. Implementation must be done in accordance with 2-CRP provisions.

- Preferred mid-management practices include rotary clipping, clip and remove residue, controlled burning, light disking, inter-seeding, and multiple weed treatments.

J Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP38E Establishment of Permanent Native Grasses (CP2) – SAFE (Columbia Basin)

A Purpose

The purpose of this practice is to establish a vegetative cover of native grasses on eligible cropland that will enhance environmental benefits.

B Program Policy

Apply this practice to establish permanent native grass species on eligible cropland.

C Eligibility

To be eligible for C/S, this practice shall:

• improve environmental benefits to less than the soil loss tolerance
• prevent degradation of environmental benefits from recurring
• be maintained for the life of CRP-1
• be included in the approved conservation plan.

To be eligible for this practice under the SAFE (Columbia Basin) project, the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of eligible SAFE areas.

CP38E Permanent Wildlife Habitat (CP4D) – SAFE (Sage Grouse and Sharp-tailed Grouse) (Continued)

I  Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428 and WA Exhibit 5.

Cost share is authorized for management activities.

Land planted to this practice under the SAFE (Sage Grouse and Sharp-tailed Grouse) project should utilize the following management activities:

- Stand mid-contract management practices are very important over the establishment period. Multiple management entries (beyond those typically utilized in non-SAFE plantings) may be scheduled in the conservation plan above normal CRP stand maintenance to improve native vegetation establishment success. Implementation must be done in accordance with 2-CRP provisions.

- Preferred mid-management practices include rotary clipping, clip and remove residue, controlled burning, light disking, inter-seeding, and multiple weed treatments.

J  Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.
National CRP Practices (Continued)

CP38E Vegetative Cover – Grass – Already Established (CP10) – SAFE (Sage Grouse and Sharp-tailed Grouse)

A  Program Policy

This practice code is used to identify land:

- under CRP-1, if a grass cover approved for the applicable signup is already established
- not under CRP-1, with a grass cover approved for the applicable signup already established.

Note: Contract management activity may be required as determined by COC, according to paragraph 428 and WA Exhibit 5.

C/S is authorized for performance of required management activity.

Example: Producer wants to re-offer 200 acres of land currently enrolled in CRP. Producer wants to develop a permanent water source for wildlife on one acre of the offered acreage. The producer’s offer would be for 199 acres of CP10 and one acre of CP1. C/S is authorized for the one acre of CP1. C/S is not authorized for the 199 acres of CP10.

Technical practice codes 327, 338, 340, 342, 394, 512, 548, 595, 614, 644, 645, and 647 may be used for CP10.

B  Eligibility

To be eligible for this practice under the SAFE (Sage Grouse and Sharp-tailed Grouse) project, the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of eligible SAFE (Sage Grouse and Sharp-tailed Grouse) areas.

In addition, to be eligible for this SAFE (Sage Grouse and Sharp-tailed Grouse) practice, the land must have:

- a combination of forbs, shrubs and perennial grasses on at least 60 percent of the acreage
- a cover of crested or Siberian wheatgrass on less than 25 percent of the acreage
- the presence of at least 5 species including:
  - 3 grasses
  - 1 forb
  - 1 shrub
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Sage Grouse and Sharp-tailed Grouse)

A Purposes

The purposes of this practice are to:

• remove nutrients, sediment, organic matter, pesticides, and other pollutants from surface runoff and subsurface flow by deposition, absorption, plant uptake, denitrification, and other processes, and thereby reduce pollution and protect surface water and subsurface water quality while enhancing the ecosystem of the water body
• create shade to lower water temperature to improve habitat for aquatic organisms
• provide a source of detritus and large woody debris for aquatic organisms and habitat for wildlife

B Program Policy

For cropland to be eligible to be enrolled in CRP to be devoted to CP38A Riparian Buffer, all of the following must be met:

• COC determines both of the following:
  • all cropland eligibility requirements in subparagraph 181 A are met
  • the cropland offered is immediately adjacent and parallel to one of the following:
    • stream having perennial flow
    • seasonal stream

  Important: USGS maps shall not be solely used to determine seasonal streams. A seasonal stream is a stream that contains water for only part of the year but more than just during and/or after rainfall or snowmelt. Seasonal streams do not include:
  • wetlands of any type
  • land devoted to CP9
  • terrace channels
  • grass or sod waterways
  • gullies
  • narrow or wide wash
  • roadside ditches
  • well, spring, or seep
  • marsh or swamp
  • center pivot irrigation corners
  • irrigation canals
  • tail water recovery pit/system.

  Note: See paragraph 181 for more information about seasonal and perennial streams.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Sage Grouse and Sharp-tailed Grouse) (Continued)

- sinkholes and karst areas
- wetlands with water areas capable of reducing damages by sedimentation and associated pollutants that meet one of the following:
  - Permanently flooded water covers the land surface throughout the year in all years
  - Intermittently exposed surface water is present throughout the year except in years of extreme drought
  - Semi-permanently flooded surface water is present throughout the growing season in most years

**Note:** When surface water is absent, the water table is at or very near the land surface.

- Seasonally flooded surface water is present for extended periods of not less than 21 calendar days especially early in the growing season, but is absent by the end of the growing season in most years

**Note:** When surface water is absent, the water table is at or very near the land surface.

- other permanent water bodies, such as lakes and ponds, that provide water cover throughout the year in all years

**Note:** Water bodies that do not provide permanent water cover throughout the year in all years are not eligible.

- NRCS or TSP determines, based on a site visit, all of the following:
  - the cropland is suitable to be devoted to a riparian buffer
  - the riparian buffer is needed and feasible to solve the resource concern
  - the cropland is capable, after the riparian buffer is established, of meeting the purposes in subparagraph A
  - Land that is not suitable for tree plantings, as determined by NRCS or TSP, is not eligible to be enrolled in CRP as a riparian buffer.

**Important:** Marginal pasture land is not eligible for enrollment in SAFE.

To be eligible for this practice under the SAFE (Sage Grouse and Sharp-tailed Grouse) projects the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of eligible SAFE (Sage Grouse and Sharp-tailed Grouse) areas.

CP38A, Riparian Buffers are not eligible to be used in conjunction with the following practices:
- CP38A, Grass Filter Strip
- CP38A, Wetland Restoration
- CP38A, Wetland Restoration, Non-Floodplain.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Sage Grouse and Sharp-tailed Grouse) (Continued)

C Size Requirements

A riparian buffer shall not be less than 35 feet in width. The minimum acceptable combined width of zones 1 and 2 in a riparian buffer is the lesser of 100 feet or 30 percent of the geomorphic floodplain. An area of native grasses and forbs may be added, if otherwise eligible, only for concentrated flow conditions dependent on the site.

Excessive sheet-rill and concentrated flow will be controlled in areas immediately adjacent and up-gradient of the buffer. This area should be the minimum necessary to control excessive sheet-rill erosion and/or concentrated flow.

A riparian buffer may be applied up to a maximum average width of 180 feet, if needed to accomplish the purpose of the practice.

Notes: The maximum average width of riparian buffers established for any purpose other than protection and enhancement of water quality shall not exceed 180 feet.

Infeasible-to-farm provisions may apply to riparian buffers on cropland.

When the minimum design specification for water quality exceeds 180 feet, the minimum design specification is the maximum average width that may be enrolled. NRCS or TSP must document the need for a minimum design specification in excess of 180 feet in writing.

Note: NRCS will determine the documentation needed to support an additional average width for water quality purposes consistent with FOTG standards. The documentation must be in the case file.

Example: Producer offers to enroll cropland to be devoted to a 180 foot wide riparian buffer to protect the adjacent eligible stream. Based on the soils, slope, and other site conditions, NRCS documents that to address the water quality resource problem and to function properly, the riparian buffer needs to be a minimum of 200 feet in width. Because the purpose of the riparian buffer is the protection and enhancement of water quality, the minimum width of 200 feet may be enrolled. The 200 foot minimum width is the maximum acreage that may be enrolled.

The riparian buffer shall begin at the top of the stream bank. In some cases there may be land that is adjacent to the stream that does not meet the eligibility criteria to be enrolled in CRP. This land shall not be enrolled in CRP. However, if the eligible land is enrolled in CRP as a riparian buffer, the ineligible land shall be included:

- in the area used as a riparian buffer
- in the conservation plan
- when determining the width of the riparian buffer.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Sage Grouse and Sharp-tailed Grouse) (Continued)

The riparian forest buffer shall be positioned appropriately and designed to achieve sufficient width, length, and vertical structural-density to accomplish the intended purposes.

Dominant vegetation will consist of naturally regenerated or seeded/planted trees and shrubs suited to the soil and hydrology of the site to achieve the intended purposes.

Excessive sheet-rill and concentrated flow will be controlled. Concentrated flow and/or excessive sheet flow may be controlled through the use of a grass strip. The width of the strip should be the minimum necessary to achieve the intended purposes.

D C/S Eligibility

To be eligible for C/S, this practice shall:
• be required by the approved conservation plan
• be implemented on land that meets the cropland history criteria or marginal pastureland
• improve environmental benefits to less than the soil loss tolerance
• reduce additional nutrients, sediment, organic matter, or other pollutants that are being delivered to areas identified in subparagraph B
• be maintained for the contract payment period
• prevent degradation of environmental benefits from recurring.

Note: Use tree species that are native and non-invasive. Use high quality and adapted plant material.
### E  C/S Policy

F Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply:

- The buffer shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Limit C/S to the minimum materials necessary to establish an adequate cover to improve environmental benefits.
- Acreage shall reduce nutrients, sediment, organic matter, pesticides, and other pollutants that are being delivered to the areas identified in subparagraph B.
- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled.
- The riparian buffer must be established and maintained according to the practice standards in FOTG.
- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Sage Grouse and Sharp-tailed Grouse) (Continued)

Land planted to this practice under SAFE (Sage Grouse and Sharp-tailed Grouse) project must meet the following requirements:

- Site preparation must provide a very clean field. Chemical fallowing for year 1 of the contract should be required if needed to achieve this.

- “Staged plantings” are recommended. Native vegetation is slow to establish. Establishing grasses and shrubs first, followed by forb planting following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat. For example, the two growing seasons would be utilized to plant and establish grass species and control broadleaf weeds. Temporary suppression of competition from existing vegetation should be done prior to inter-seeding or inter-planting native forbs in the second or third season.

- “Island plantings” are authorized. After grass is established, a favorable option will be to plant forbs and/or shrubs in islands within the field in suitable sites instead of throughout the entire field. Plantings will be completed by interseeding seed and/or hand planting container plug stock. Since native forbs and shrubs are often expensive and a seed or seedling source is not always available, planting in islands around the field will allow for future dispersal of these species throughout the field.

- Forb strips and blocks, rather than planting across the entire acreage, is also allowed in accordance with WA Exhibit 4, page 2. This will aid in weed control and reduce the establishment cost for these species. Particular items to note in the WA Exhibit 4 procedure is the requirement to plant strips that are a minimum of 72 feet wide, limit these plantings to a minimum of 10 percent and maximum of 20 percent of the contract acreage, and use spot control to manage weeds in forb strips to reduce loss of desired native vegetation. Minimum widths will be the minimum widths specified in the NRCS grass filter standard.

- Planting container plug stock can lead to better survival and establishment and thus may be more cost-effective than inter-seeding seed within restoration project sites in some cases. Prior to planting containerized native planting stock, existing vegetation will be temporarily suppressed to improve success of establishment.

G Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 to 36 months of the effective date of CRP-1.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Sage Grouse and Sharp-tailed Grouse) (Continued)

H Environmental Concerns

Consideration of wildlife habitat, water quality and quantity, and other environmental concerns are to be evaluated in the planning and establishment of the protective measure.

I Practice Maintenance

This practice shall be maintained without additional C/S for the life of the practice according to the practice standards in FOTG. C/S shall be refunded if either of the following applies:
- the producer destroys the practice during the contract period
- the cover fails to provide adequate protection of water quality during the practice lifespan, unless the failure is caused by circumstances beyond the producer’s control.

J Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428 and WA Exhibit 5. Cost share is authorized for management activities.

For land planted to this practice under the SAFE (Sage Grouse and Sharp-tailed Grouse) project, stand mid-contract management practices are very important over the establishment period. Multiple management entries (beyond those typically utilized in non-SAFE plantings) may be scheduled in the conservation plan to improve native vegetation establishment success. Implementation must be done in accordance with 2-CRP provisions.

K Technical Responsibility

Technical responsibility for this practice shall be assigned NRCS or TSP.
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Ferruginous Hawk)

A Purposes

*--The purposes of this practice are to:

- remove nutrients, sediment, organic matter, pesticides, and other pollutants from surface runoff and subsurface flow by deposition, absorption, plant uptake, denitrification, and other processes, and thereby reduce pollution and protect surface water and subsurface water quality while enhancing the ecosystem of the water body
- create shade to lower water temperature to improve habitat for aquatic organisms
- provide a source of detritus and large woody debris for aquatic organisms and habitat for wildlife

B Program Policy

To be eligible for this practice under the SAFE (Shrub-Steppe) projects the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of eligible SAFE (Shrub-Steppe) areas. 51% of the offered parcel must be within a ½ mile buffer around identified shrub-steppe habitat.

For cropland to be eligible to be enrolled in CRP to be devoted to CP38A Riparian Buffer, all of the following must be met:

- COC determines both of the following:
  - all cropland eligibility requirements in subparagraph 181 A are met
  - the cropland offered is immediately adjacent and parallel to one of the following:
    - stream having perennial flow
    - seasonal stream

Important: USGS maps shall not be solely used to determine seasonal streams. A seasonal stream is a stream that contains water for only part of the year but more than just during and/or after rainfall or snowmelt. Seasonal streams do not include:

- wetlands of any type
- land devoted to CP9
- terrace channels
- grass or sod waterways
- gullies--*
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Ferruginous Hawk) (Continued)

• *--narrow or wide wash
• roadside ditches
• well, spring, or seep
• marsh or swamp
• center pivot irrigation corners
• irrigation canals
• tail water recovery pit/system.

Note: See paragraph 181 for more information about seasonal and perennial streams.

• sinkholes and karst areas

• wetlands with water areas capable of reducing damages by sedimentation and associated pollutants that meet one of the following:

  • Permanently flooded water covers the land surface throughout the year in all years
  
  • Intermittently exposed surface water is present throughout the year except in years of extreme drought
  
  • Semi-permanently flooded surface water is present throughout the growing season in most years

  Note: When surface water is absent, the water table is at or very near the land surface.

• Seasonally flooded surface water is present for extended periods of not less than 21 calendar days especially early in the growing season, but is absent by the end of the growing season in most years

  Note: When surface water is absent, the water table is at or very near the land surface.

• other permanent water bodies, such as lakes and ponds, if both the following are met:
  
  • provides water cover throughout the year in all years
  
  • flows from the water body off the farm

  Exception: A pond that is less than 5.0 acares and does not flow from the water body off the farm is not eligible to be enrolled in CP22.--*
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Ferruginous Hawk) (Continued)

*--Note: Water bodies that do not provide permanent water cover throughout the year in all years are not eligible.

- NRCS or TSP determines, based on a site visit, all of the following:
  - the cropland is suitable to be devoted to a riparian buffer
  - the riparian buffer is needed and feasible to solve the resource concern
  - the cropland is capable, after the riparian buffer is established, of meeting the purposes in subparagraph A

- Land that is not suitable for tree plantings, as determined by NRCS or TSP, is not eligible to be enrolled in CRP as a riparian buffer.

Important: Marginal pasture land is not eligible for enrollment in SAFE.

C Size Requirements

A riparian buffer shall not be less than 35 feet in width. The maximum width of a riparian buffer is the lesser of 100 feet or 30 percent of the geomorphic floodplain. An area of native grasses and forbs may be added, if otherwise eligible, only for concentrated flow conditions dependent on the site.

Excessive sheet-rill and concentrated flow will be controlled in areas immediately adjacent and up-gradient of the buffer. This area should be the minimum necessary to control excessive sheet-rill erosion and/or concentrated flow. A riparian buffer may be applied up to a maximum average width of 180 feet, if needed to accomplish the purpose of the practice.

Notes: The maximum average width of riparian buffers established for any purpose other than protection and enhancement of water quality shall not exceed 180 feet.

Infeasible-to-farm provisions may apply to riparian buffers on cropland.

When the minimum design specification for water quality exceeds 180 feet, the minimum design specification is the maximum average width that may be enrolled. NRCS or TSP must document the need for a minimum design specification in excess of 180 feet in writing.

Note: NRCS will determine the documentation needed to support an additional average width for water quality purposes consistent with FOTG standards. The documentation must be in the case file.--*
*Example: Producer offers to enroll cropland to be devoted to a 180 foot wide riparian buffer to protect the adjacent eligible stream. Based on the soils, slope, and other site conditions, NRCS documents that to address the water quality resource problem and to function properly, the riparian buffer needs to be a minimum of 200 feet in width. Because the purpose of the riparian buffer is the protection and enhancement of water quality, the minimum width of 200 feet may be enrolled. The 200 foot minimum width is the maximum acreage that may be enrolled.

The riparian buffer shall begin at the top of the stream bank. In some cases there may be land that is adjacent to the stream that does not meet the eligibility criteria to be enrolled in CRP. **This land shall not be enrolled in CRP.** However, if the eligible land is enrolled in CRP as a riparian buffer, the ineligible land **shall be** included:

- in the area used as a riparian buffer
- in the conservation plan
- when determining the width of the riparian buffer.

The riparian forest buffer shall be positioned appropriately and designed to achieve sufficient width, length, and vertical structural-density to accomplish the intended purposes.

Dominant vegetation will consist of naturally regenerated or seeded/planted trees and shrubs suited to the soil and hydrology of the site to achieve the intended purposes.

Excessive sheet-rill and concentrated flow will be controlled. Concentrated flow and/or excessive sheet flow may be controlled through the use of a grass strip. The width of the strip should be the minimum necessary to achieve the intended purposes.

**D C/S Eligibility**

To be eligible for C/S, this practice shall:

- be required by the approved conservation plan
- be implemented on land that meets the cropland history criteria or marginal pastureland
- improve environmental benefits to less than the soil loss tolerance
- reduce additional nutrients, sediment, organic matter, or other pollutants that are being delivered to areas identified in subparagraph B--*
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Ferruginous Hawk) (Continued)

- *--be maintained for the contract payment period
- prevent degradation of environmental benefits from recurring.

See subparagraphs E and H for eligible C/S when producer elects natural regeneration.

F Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply:

- The buffer shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Limit C/S to the minimum materials necessary to establish an adequate cover to improve environmental benefits.
- Acreage shall reduce nutrients, sediment, organic matter, pesticides, and other pollutants that are being delivered to the areas identified in subparagraph B.
- Chemicals used in performing the practice must be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled.
- The riparian buffer must be established and maintained according to the practice standards in FOTG.--*
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Ferruginous Hawk) (Continued)

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

Land planted to this practice under SAFE (Ferruginous Hawk) project must meet the following requirements:

- Site preparation must provide a very clean field. Chemical fallowing for year 1 of the contract should be required if needed to achieve this.

- “Staged plantings” are recommended. Native vegetation is slow to establish. Establishing grasses first, followed by forb and shrub planting in following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat. For example, the first two growing seasons would be utilized to plant and establish grass species and control broadleaf weeds. Temporary suppression of competition from existing vegetation should be done prior to inter-seeding or inter-planting native forbs and shrubs in the third season.

- “Island plantings” are recommended. After grass is established, a favorable option will be to plant forbs and/or shrubs in islands within the field in suitable sites instead of throughout the entire field. Plantings will be completed by inter-seeding seed and/or hand planting container plug stock. Since native forbs and shrubs are often expensive and a seed or seedling source is not always available, planting in islands around the field will allow for future dispersal of these species throughout the field.

- Forb strips and blocks, rather than planting across the entire acreage, is also allowed in accordance with WA Exhibit 4, page 2. This will aid in weed control and reduce the establishment cost for these species. Particular items to note in the WA Exhibit 4 procedure is the requirement to plant strips that are a minimum of 72 feet wide, limit these plantings to a minimum of 10 percent and maximum of 20 percent of the contract acreage, and use spot control to manage weeds in forb strips to reduce loss of desired native vegetation. Minimum widths will be the minimum widths specified in the NRCS grass filter standard.

- Planting container plug stock can lead to better survival and establishment and thus may be more cost-effective than inter-seeding seed within restoration project sites in some cases. Prior to planting containerized native planting stock, existing vegetation will be temporarily suppressed to improve success of establishment.--*
National Practices (Continued)

CP38A Riparian Buffer (CP22) – SAFE (Ferruginous Hawk) (Continued)

G Planting Timespan

*--Planting or sowing of the approved cover shall be completed within 12 to 36 months of the effective date of CRP-1.

Exceptions: See paragraph 426 for exceptions to 12-month plating requirement.

See subparagraph H for natural regeneration.

H Natural Regeneration

Important: Natural regeneration is not an authorized practice in Washington unless a contract specific waiver is obtained from the State Office in advance. If a waiver is granted, the follow provisions apply.

Producers may elect to allow natural regeneration of the riparian buffer if all of the following are met:

- NRCS or TSP determines both of the following:
  - an adequate seed source of approved tree, shrub, and grass species is present in the soil at the site

Note: Grass is an acceptable cover in the riparian buffer only if determined needed to control concentrated flow and an excessive sheet flow.

- under normal conditions, the appropriate cover will be established within 2 years of CRP-1 effective date

- erosion and runoff will be controlled during the establishment period

- weeds, including noxious weeds, and other nonapproved plant species will be controlled during the establishment period--*
H Natural Regeneration (Continued)

- the conservation plan signed by the producer requires all of the following:
  - no C/S shall be paid for the practice

Exceptions: See subparagraph E.

- the producer will plant the approved cover at no cost to FSA or CCC according to a revised conservation plan if the riparian buffer is not established through natural regeneration within 2 years of CRP-1 effective date

- conservation practice code 647, Early Successional Habitat Development/Management, is used to identify natural regeneration

- NRCS or TSP shall spot check the site at the end of the second year to determine whether the riparian buffer is established and meets the standards and specifications for NRCS conservation practice code 391A, Riparian Forest Buffer

Note: FSA must immediately notify COC and the participant:

- of the result of the spot check
- that the participant must plant the approved cover with no C/S according to a revised conservation plan, if applicable.

COC shall not approve CRP-1 until all of the preceding requirements are met. COC shall ensure the producer is fully informed that:

- no C/S will be paid for natural regeneration

Exceptions: See subparagraph E.

- the producer will be required to plant the approved cover with no C/S if the approved cover is not established within 2-years of CRP-1 effective date.

I Environmental Concerns

Consideration of wildlife habitat, water quality and quantity, and other environmental concerns are to be evaluated in the planning and establishment of the protective measure.--*
J Practice Maintenance

*--This practice shall be maintained without additional C/S for the life of the practice according to the practice standards in FOTG.

C/S shall be refunded if either of the following applies:

- the producer destroys the practice during the contract period
- the cover fails to provide adequate protection of water quality during the practice lifespan, unless the failure is caused by circumstances beyond the producer’s control.

K Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428 and WA Exhibit 5. Cost share is authorized for management activities.

For land planted to this practice under the SAFE (Ferruginous Hawk) project, stand mid-contract management practices are very important over the establishment period. Multiple management entries (beyond those typically utilized in non-SAFE plantings) may be scheduled in the conservation plan to improve native vegetation establishment success. Implementation must be done in accordance with 2-CRP provisions.

L Technical Responsibility

Technical responsibility for this practice shall be assigned NRCS or TSP.--*
National CRP Practices (Continued)

CP38E Permanent Wildlife Habitat (CP4D) – SAFE (Ferruginous Hawk)

A Purpose

*--The purpose of this practice is to establish a permanent wildlife habitat cover to enhance environmental benefits for the wildlife habitat of the designated or surrounding areas.

B Program Policy

Apply this practice to eligible cropland that is suitably located and adapted to the establishment of permanent wildlife habitat.

A wildlife conservation plan must be developed for acreage under CRP-1 devoted to CP38E, Permanent Wildlife Habitat.

C Eligibility

To be eligible for this practice under the SAFE (Ferruginous Hawk) project, the land must be in the designated SAFE program area. See WA Exhibit 33 for the designation of eligible SAFE (Shrub-Steppe) areas. At least 51% of the offered acreage must be in the designated SAFE area.

To be eligible for C/S, this practice shall:

- improve environmental benefits to less than the soil loss tolerance
- prevent degradation of environmental benefits from recurring
- be maintained for the CRP-1 period
- be included in the approved conservation plan
- include woody vegetation as determined appropriate by STC in consultation with the State Technical Committee.

Note: C/S is authorized as a component of CP4D development of a permanent water source for wildlife.--*
D C/S Policy

*--This table shows C/S policies for this practice.

| minerals               | to enhance production       |                |

Note: C/S does not apply for existing cover with no enhancements.--*
National CRP Practices (Continued)

CP38E Permanent Wildlife Habitat (CP4D) – SAFE (Ferruginous Hawk) (Continued)

E Requirements

*--The following are requirements for this practice.

- Limit C/S to the minimum minerals and seeds necessary to establish an adequate cover for permanent wildlife habitat.

- Plantings must be protected from destructive fire and shall not be harvested or grazed by domestic livestock for the life of CRP-1.

- Chemicals used in performing CP38E (Ferruginous Hawk) must be:
  - Federally, State, and locally registered
  - applied according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.

- A wildlife conservation plan must be developed for acreage under CRP-1 devoted to CP38E (Ferruginous Hawk).

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

Land planted to this practice under CP38E for the SAFE (Ferruginous Hawk) project must meet the following requirements:

- Site preparation must provide a very clean field. Chemical fallowing for year 1 of the contract should be required if needed to achieve this.

- “Staged plantings” are recommended. Native vegetation is slow to establish. Establishing grasses first, followed by forb and shrub planting in following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat. For example, the first two growing seasons would be utilized to plant and establish grass species and control broadleaf weeds. Temporary suppression of competition from existing vegetation should be done prior to inter-seeding or inter-planting native forbs and shrubs in the third season.--*
E Requirements (Continued)

- *--“Island plantings” are recommended. After grass is established, a favorable option will be to plant forbs and/or shrubs in islands within the field in suitable sites instead of throughout the entire field. Plantings will be completed by inter-seeding seed and/or hand planting container plug stock. Since native forbs and shrubs are often expensive and a seed or seedling source is not always available, planting in islands around the field will allow for future dispersal of these species throughout the field.

- Forb strips and blocks, rather than planting across the entire acreage, is also allowed in accordance with WA Exhibit 4, page 2. This will aid in weed control and reduce the establishment cost for these species. Particular items to note in the WA Exhibit 4 procedure is the requirement to plant strips that are a minimum of 72 feet wide, limit these plantings to a minimum of 10 percent and maximum of 20 percent of the contract acreage, and use spot control to manage weeds in forb strips to reduce loss of desired native vegetation.

- Planting container plug stock can lead to better survival and establishment and thus may be more cost-effective than inter-seeding seed within restoration project sites in some cases. Prior to planting containerized native planting stock, existing vegetation will be temporarily suppressed to improve success of establishment.

F Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

G Environmental Concerns

Consider preserving and improving the environment and wildlife concerns when making determinations about types of plantings, spacing, and other practice specifications.

H Practice Maintenance

The practice shall be maintained without additional C/S for the CRP-1 period. C/S shall be refunded if:

- producer destroys the cover during the CRP-1 period

- cover fails to provide enhancement of environmental benefits during the practice lifespan, unless caused by circumstances beyond the producer’s control.--*
National CRP Practices (Continued)

CP38E Permanent Wildlife Habitat (CP4D) – SAFE (Ferruginous Hawk) (Continued)

I Management Activity

*--This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428 and WA Exhibit 5.

Cost share is authorized for management activities.

Land planted to this practice under the SAFE (Ferruginous Hawk) project should utilize the following management activities:

- Stand mid-contract management practices are very important over the establishment period. Multiple management entries (beyond those typically utilized in non-SAFE plantings) may be scheduled in the conservation plan above normal CRP stand maintenance to improve native vegetation establishment success. Implementation must be done in accordance with 2-CRP provisions.

- Preferred mid-management practices include rotary clipping, clip and remove residue, controlled burning, light disking, inter-seeding, and multiple weed treatments.

J Program Development

County programs shall provide for any specification and requirements that are conditions for C/S. Technical specifications may be incorporated by reference.

K Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.--*
National CRP Practices (Continued)

CP39  FWP Constructed Wetland

A Purpose

The purpose of this practice is to develop a constructed wetland to treat effluent from row crop agricultural drainage systems. The constructed wetland system is designed to reduce nutrient and sediment loading and provide other water quality benefits while providing wildlife habitat.

B Program Policy

Apply this practice on land in which a minimum of 25 percent of the upstream watershed is comprised of row crop agricultural drained land. The site shall be suitable for the construction of a cropped wetland. Site suitability will be dependant on:

- soils
- geology of the site (sites may be limited due to karst formation and other geologic features)
- topography (steep slopes or flat topography may present challenges in ensuring sufficient wetland are to provide adequate treatment
- legal requirements including with drainage districts
- ownership requirements (owner controls the land area of the wetland and associated buffer)
- safety issues (the site does not provide a significant risk to public safety or property because of structure failure)
- due diligence investigation.

C Size Requirements

The maximum size for the wetland and associated buffers is 40 acres per tract. A buffer ** is required for the constructed wetland.

The amount of adjacent upland (buffer) acreage to be enrolled shall:

- be determined by NRCS
- not be less than the 2:1 ratio
- not exceed the 4:1 ratio.
National CRP Practices (Continued)

CP39  FWP Constructed Wetland (Continued)

D  Authorized Payments

Payments, including annual rental, CRP-SIP, PIP, 20 percent SRR incentive and C/S are authorized for CP39.

E  C/S Eligibility

To be eligible for C/S, this practice shall:

- be included in the approved conservation plan
- be maintained for the life of CRP-1
- reduce the loading of nutrients, sediment and other pollutants from incoming waters
- improve surface and ground water quality
- prevent excessive erosion from recurring
- provide waterfowl and other wildlife habitat
- reduce flood flows.

F  C/S Policy

The following provides C/S policies for this practice.

<table>

G  Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.

- Limit C/S to the minimum work and materials necessary to develop the constructed wetland or restore the wetland hydrology, and establish an adequate cover to improve environmental benefits. COC may request to DAFP cost-share in excess of the minimum work and materials necessary on a case by case basis.

- Chemicals used in establishing the practice must be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
  - Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.
  - The practice must be established and maintained according to the practice standards in FOTG.
G Practice Requirements (Continued)

- The hydrology of the constructed wetland must be maintained according to the operation and maintenance requirements for the practice standard.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.

H Planting Timespan

Planting or sowing of the approved cover shall be completed within 24 months of the effective date of CRP-1. See paragraph 426 for exceptions.

I Environmental Concerns

Consideration of water quality, wildlife, and other environmental concerns are to be evaluated in the planning and establishment of this practice. FSA shall conduct a site investigation prior to approving a CPR-1 on a constructed wetland. This investigation is to determine if potential hazardous materials may be associated with the site. Potential impacts to historic/cultural resources and threatened and endangered species should be evaluated. Appropriate regulatory agencies should be consulted with in this process.
J Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG.

C/S shall be refunded if any of the following apply:

- producer destroys the practice during the life of CRP-1
- producer fails to maintain the cover during the life of CRP-1
- the cover fails to provide adequate protection of water quality during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.

K Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

L Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP. For areas to be established to trees, FS or State Forestry Agency shall have technical responsibility.
CP40 Farmable Wetlands Program Aquaculture Wetland Restoration

A Purpose

The purpose of this practice is to restore habitat or the functions and values of wetland ecosystems that have been devoted to commercial pond-raised aquaculture. The level of restoration of the wetland ecosystem shall be determined by the producer in consultation with NRCS or TSP.

B Program Policy

Apply this practice to eligible land devoted to commercial pond-raised aquaculture to do the following:

- restore habitat or the functions and values of the wetland ecosystem
- provide water cover for wildlife habitat

Note: The restoration of wetland hydrology is only required to the extent specified by the producer.

If the land is developed to provide water cover for wildlife habitat, the water area must be an average depth of 6 to 18 inches. The water area must provide a source of water for wildlife for a majority of the year.

Note: Water cover is limited to 20 percent of the total enrolled acreage.

Food plots may be permitted to enhance the wildlife habitat on up to 10 percent of the enrolled land.

All levees must be planted to appropriate vegetative or tree cover if enrolled as part of the CRP contract. Levees used as access roads will not be part of the CRP contract.

C Eligible Land Limit

Total eligible land for wetland restorations is limited to land that was devoted to commercial pond-raised aquaculture any 1 year, 2002 through 2007.

D Size Requirements

Land enrolled under CP40 has no size limitation.
E  C/S Eligibility

To be eligible for C/S, this practice shall:

- be included in the approved conservation plan
- be maintained for the life of CRP-1
- restore the functional capability and values of the wetland ecosystem to a level determined by the participant in consultation with NRCS or TSP, including the following:
  - preventing degradation of the wetland area and surrounding upland area from recurring
  - increasing sediment trapping efficiencies
  - improving surface and ground water quality
  - preventing excessive erosion from recurring
  - providing waterfowl and other wildlife habitat
  - reducing flood flows.

F  C/S Policy

The following provides C/S policies for this practice.

<table>
<thead>
<tr>
<th>IF the component is...</th>
<th>AND the justification is...</th>
<th>THEN C/S is...</th>
</tr>
</thead>
<tbody>
<tr>
<td>earthmoving</td>

G Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Limit C/S to the minimum work and materials necessary to develop or restore the wetland hydrology, and establish an adequate cover to improve environmental benefits.
- The wetland ecosystem shall be restored to the extent identified according to subparagraph B.

Note: The level of restoration shall be determined by the producer in consultation with NRCS or TSP.
Chemicals used in establishing the practice must be:

- Federally, State, and locally registered
- applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.

- The practice must be established and maintained according to the practice standards in FOTG.

- The hydrology of the wetland must be maintained according to the operation and maintenance requirements for the practice standard.

- The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.
National CRP Practices (Continued)

CP40  Farmable Wetlands Program Aquaculture Wetland Restoration (Continued)

H  Natural Regeneration

Producers may elect to allow natural regeneration of the aquaculture wetland if all of the following are met:

- NRCS or TSP determines both of the following:
  - an adequate seed source of approved tree, shrub, and grass species is present in the soil at the site
  - under normal conditions, the appropriate cover will be established within 2 years of CRP-1 effective date

- erosion and runoff will be controlled during the establishment period

- weeds, including noxious weeds, and other nonapproved plant species will be controlled during the establishment period

- the conservation plan signed by the producer requires all of the following:

  - no C/S shall be paid for the practice

Exceptions: See subparagraph E.

- the producer will plant the approved cover at no cost to FSA or CCC according to a revised conservation plan if the aquaculture wetland is not established through natural regeneration within 2 years of CRP-1 effective date

- conservation practice code 647, Early Successional Habitat Development/Management, is used to identify natural regeneration

- NRCS or TSP shall spot check the site at the end of the second year to determine whether the aquaculture wetland is established and meets the standards and specifications for NRCS conservation practice code 391A, Riparian Forest Buffer

Note: FSA must immediately notify COC and the participant:

- of the result of the spot check

- that the participant must plant the approved cover with no C/S according to a revised conservation plan, if applicable.
H  Natural Regeneration (Continued)

COC shall not approve CRP-1 until all of the preceding requirements are met. COC shall ensure the producer is fully informed that:

- no C/S will be paid for natural regeneration

  Exceptions: See subparagraph E

- the producer will be required to plant the approved cover with no C/S if the approved cover is not established within 2-years of the CRP-1 effective date.

I  Planting Timespan

Planting or sowing of the approved cover shall be completed within 24 months of the effective date of CRP-1. See paragraph 426 for exceptions.

J  Environmental Concerns

Consideration of water quality, wildlife, and other environmental concerns are to be evaluated in the planning and establishment of this practice.

K  Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG.

C/S shall be refunded if any of the following apply:

- producer destroys the practice during the life of CRP-1
- producer fails to maintain the cover during the life of CRP-1
- the cover fails to provide adequate protection of water quality during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.
National CRP Practices (Continued)

CP40 Farmable Wetlands Program Aquaculture Wetland Restoration (Continued)

L Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.

M Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP. For areas to be established to trees, FS or State Forestry Agency shall have technical responsibility.
National CRP Practices (Continued)

CP41  FWP Flooded Prairie Wetland

A  Purpose

The purpose of this practice is to restore the functions and values of wetlands that have been subject to the natural overflow of a prairie wetland. Hydrology and vegetation must be restored to the maximum extent possible, as determined by USDA.

B  Program Policy

Apply this practice to eligible cropland that is suitably located in the Prairie Pothole CPA and adapted to the restoration of wetland functions and values. The restoration of the wetland hydrology and vegetation is required to the maximum extent possible.

For cropland to be eligible to be enrolled in CRP under FWP and be devoted to CP41, all of the following must be met:

- cropland meets cropping history requirements of 246
- the cropland was subject to the natural overflow of a prairie wetland
- an associated buffer (CP28) is offered.

C  Size Requirements

The maximum acceptable size of any 1 CP41 is 20 contiguous acres. Wetlands greater than 20 acres in size are not eligible for enrollment in CRP under FWP as practice CP41. The total of all wetlands on the tract is limited to 40 acres. Associated buffers (CP28) are required for each CP41 enrolled. The minimum acceptable width of the associated buffer (CP28) is 30 feet. The maximum buffer size may not exceed up to 4 times the size of the eligible wetland. See CP28 Farmable Wetlands Pilot Buffer, for the practice requirements for the associated buffer.

Examples:  A producer offers a 21 acre wetland. Because the total wetland is greater than 20 acres in size, the entire 21 acre wetland is ineligible for enrollment in CRP under FWP as CP41.

A producer offers a 10 acre wetland, a 14 acre wetland and a 16 acre wetland for enrollment as CP41. Because no wetland is greater than 20 acres in size and the total of all wetlands is 40 acres, all wetlands may be enrolled as CP41. A buffer, not to exceed a 4:1 ratio, must also be enrolled.
National CRP Practices (Continued)

CP41 FWP Flooded Prairie Wetland (Continued)

D C/S Eligibility

To be eligible for C/S, this practice shall:

- only be enrolled under FWP
- only be enrolled with an eligible associated buffer (CP28)
- meet the cropping history requirements
- be included in the approved conservation plan
- be maintained for the life of CRP-1
- restore the functional capability and values of the wetland.

E Authorized Payments

Payments, including annual rental, CRP-SIP, PIP, 20 percent SRR incentive, and C/S are authorized for CP41

F C/S Policy

</tr>
</tbody>
</table>
G Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.
- Limit C/S to the minimum work and materials necessary to develop or restore the wetland hydrology, and establish an adequate cover to improve environmental benefits.
- The wetland shall be restored to the extent identified according to subparagraph B.
- Chemicals used in establishing the practice must be:
  - Federally, State, and locally registered
  - applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.
- Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding lands.
- The practice must be established and maintained according to the practice standards in FOTG.
- The hydrology of the wetland must be maintained according to the operation and maintenance requirements for the practice standard.

H Planting Timespan

Planting or sowing of the approved permanent cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

I Environmental Concerns

Consideration of water quality, wildlife, and other environmental concerns are to be evaluated in the planning and establishment of this practice.
National CRP Practices (Continued)

CP41  FWP Prairie Flooded Wetland (Continued)

J  Practice Maintenance

The practice shall be maintained without additional C/S for the life of CRP-1 according to the practice standards in FOTG.

C/S shall be refunded if any of the following apply:

• producer destroys the practice during the life of CRP-1
• producer fails to maintain the cover during the life of CRP-1
• the cover fails to provide adequate protection of water quality during the life of CRP-1, unless the failure is caused by circumstances beyond the producer’s control.

K  Associated Practice

This practice is only authorized with the associated practice CP28, Farmable Wetland Pilot Buffer, to ensure that the functions and values of the wetland are maintained for the length of the contract.

L  Technical Responsibility

NRCS or TSP shall have the technical responsibility for this practice, except in those areas established to trees, the Forest Service or State Forestry Agency shall have the technical responsibility.

M  Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. See paragraph 428.

C/S is authorized for management activities.
National CRP Practices (Continued)

*--CP42 Pollinator Habitat

A Purpose

The purpose of this practice is to establish habitat to support a diversity of pollinator species.

B Program Policy

Apply this practice to eligible cropland where pollinator habitat can be established and maintained, as determined by NRCS technical specifications, in a cost-effective manner through enrollment in CRP.

The conservation plan developed for acreage under CRP-1 devoted to CP42 must address pollinator habitat needs.

C Size Requirements

- Producers may use CP42 on all offered acreage.

- If not planted in whole fields, block plantings of CP42 are preferred over strips. If planted in strips, each strip must be a minimum of 20 feet wide.

- Habitat areas of CP42 must be at least 0.5 acres each.

Example 1: Participant A offers 40 acres, with all acreage in CP42. This offer is eligible.

Example 2: Participant B offers 7 acres, including 1 acre of CP42. Individual habitat areas of CP42 must be no smaller than 0.5 acres.
*--CP42 Pollinator Habitat (Continued)

**D Eligibility**

To be eligible for C/S, this practice shall:

- create pollinator habitat to an acceptable level
- prevent degradation of pollinator habitat from recurring after establishment
- be maintained for the CRP-1 period
- be included in the approved conservation plan
- prevent degradation of environmental benefits from recurring after establishment
- improve environmental benefits to less than the soil loss tolerance.--*
E  C/S Policy

F Practice Requirements

In addition to the practice standards in NRCS FOTG, the following requirements apply.

- This practice may be used with other conservation practices

- Seeding mixes shall contain a minimum of 9 species of pollinator-friendly wildflowers, legumes, and/or shrubs. More than 9 species are encouraged. Trees are not an eligible component of CP42 seed mixes.

  **Exception:** States with arid areas may submit alternative standards.

- At least 3 species shall have their primary onset of blooming during each period of April through June 15, June 15 through July, and August through October. The 3 species need not be in bloom for the entirety of a bloom period.

  **Exception:** States with arid areas may submit alternative standards.

- State Committees may propose alternatives to species diversity and bloom period standard for arid areas only. Alternative standards must receive DAFP approval.

- Seeding mixes shall include no more than 25 percent grasses based on pure live seeds per square foot. Grass is not required in CP42.

- Where allowed by NRCS FOTG, total seed mixes, including grass seeds, must be 15-30 pure live seeds per square foot. Seeding rates may be higher where required by NRCS FOTG.--*
Grasses seeded in this practice must be native. Though wildflower, legume, and/or shrub species planted are encouraged to be native, beneficial introduced flowering plants (e.g., alfalfa and clover) may be part of the seeding mix. Each introduced species is encouraged to make up no more than 10 percent of the pure live seed mixture with a total of introduced flowering plants encouraged to not exceed 20 percent of the pure live seed mixture.

To provide quality nesting habitat for native bees, nonsod forming bunch grasses are preferred over sod-forming grasses, if including grass in the seeding mix.

Chemicals used in performing the practice must be:

- Federally, State, and locally registered
- applied strictly according to authorized registered uses, directions on the label, and other Federal or State policies and requirements.

The practice must be established and maintained according to the practice standards in NRCS FOTG.

If included in the approved conservation plan and where allowed by NRCS FOTG, brush piles, downed tree structures, edge feathering, or similar methods may be used to create dead woody material for pollinator nesting habitat. No trees may be enrolled in CP42 Pollinator Habitat. Edge feathering may be included in a conservation plan where a forested edge or treeline owned by the participant abuts CP42 and edge feathering material can be dropped on to CP42. Woody habitat created on CP42 shall not exceed 1,500 square feet for every 1 acre of CP42, up to 1 acre in total woody habitat.

Noxious weeds and other undesirable plants, insects, and pests shall be controlled, including such maintenance as necessary to avoid an adverse impact on surrounding land.

Spot application of herbicide may be needed to control undesirable plants.

The seeded area shall not be harvested or grazed by domestic livestock for the life of CRP-1.

Where practicable, as determined by NRCS or TSP, State-certified seed shall be used for CP42.

The practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC.→*
*--CP42 Pollinator Habitat ( Continued )

G Practice Length

The practice length for CP42 is 10 years.

H Planting Timespan

Planting or sowing of the approved cover shall be completed within 12 months of the effective date of CRP-1. See paragraph 426 for exceptions.

I Environmental Concerns

Consider preserving and improving pollinator and wildlife habitat, and other environmental concerns when making determinations about types of plantings, spacing, and other practice specifications.

J Practice Maintenance

The practice shall be maintained without additional C/S for the CRP-1 period. C/S shall be refunded if:

- producer destroys the cover during the CRP-1 period
- cover fails to provide adequate pollinator habitat and environmental benefits during the practice lifespan, unless caused by circumstances beyond the producer’s control.

K Management Activity

This practice shall have periodic management activities performed, according to the conservation plan, during the life of CRP-1, as determined by COC. The practice shall be disturbed on a rotational basis by light disking, prescribed burning, selective herbicide application, or other prescribed methods as approved by STC. Management methods shall enhance or maintain flowering plant diversity, set back vegetative succession and woody encroachment, and expose soil for pollinator nesting sites. Mowing is generally an inadequate means of disturbance for pollinator habitat, except as needed to remove annual weeds during establishment, or to facilitate prescribed burning or light disking. See paragraph 428.

C/S is authorized for management activities.

L Technical Responsibility

Technical responsibility for this practice shall be assigned to NRCS or TSP.--*
Adjusted Gross Income (AGI) Limitation Waiver Request Worksheet for Conservation Reserve Program

<th>Contract Number</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The waiver request must show that use of conservation program funding by an individual addresses at least one of the following categories.

☐ (1) Critical to the success of a project that benefits multiple producers in a community, watershed, or other geographic area, or

☐ (2) Enables USDA to achieve enduring conservation treatment through a long-term agreement that is greater than 15 years in duration or through a deed restriction on the land. Note: Programs with agreements less than 15 years in duration will need to be in a partnership with another type of agreement to meet these criteria.

Section 2: National Priority or Emphasis

The conservation practice(s/activity) to be implemented on the producer’s land must benefit one or more of the national priorities or emphasis areas specific to the applicable program.

List the farm bill program the producer intends to participate in and identify the national priorities or emphasis (program specific) that will be addressed. (List all that apply):

### Adjusted Gross Income (AGI) Limitation Waiver Request Worksheet for Conservation Reserve Program (Continued)

#### Section 3: Federal, Regional, Tribal or State Resource Management Plan or Natural Resource Plans

The environmentally sensitive land of special significance is clearly identified in an approved federal, regional, Tribal, or state environmental or natural resource plan or report. The planned conservation practice(s) or activity will protect or be an integral component in addressing the federal, regional, tribal, or State plan’s objectives. (check all that apply):

- [ ] State Wildlife Action Plan/Report Title:
- [ ] State Water Quality Plan, Plan/Report Title:
- [ ] National Air Quality Plan, Plan/Report Title:
- [ ] U.S. Fish and Wildlife Recovery Plan Title:
- [ ] National Fish Habitat Action Plan Title:
- [ ] Nationally accepted Agricultural Water Enhancement Program (AWEP, CCPI or CIG) Project Name:
- [ ] Other federal, regional, state or Tribal plan, or report, Plan/Report Title:

Briefly provide the justification and a description on how the conservation practice(s)/activity on this land will address the identified resource issues in the national, regional, state, or Tribal plan or report?

#### Section 4: Critical Resource

The conservation practice(s) or activity will be applied to the land that directly impacts a critical resource as identified in a resource plan identified in section 3 and is within or adjacent to the agricultural operation. Must meet one or more of the following critical resources: (check all that apply):

- [ ] Air Quality, nonattainment area
- [ ] Coastal Resources (Coastal zones as identified per the Coastal Zone Management Act of 1972 that have a direct and significant impact on coastal waters)

Name of coastal resource:

- [ ] Federal or State listed threatened, endangered, candidate species or concern, or at risk species.
  - List species:

- [ ] Groundwater recharge area, Name of recharge area
- [ ] Historical or cultural resource; List historical or cultural resource:
  - (Submit a letter from State or Tribal Historical Preservation Officer that supports this conservation practice(s)/activity on the subject land).

- [ ] Prime or Unique Farmland
- [ ] Water Quality
- [ ] Wetlands
- [ ] Other critical resource issues, such as climate change and energy conservation:

Briefly describe how the conservation practice(s)/activity will benefit the identified critical resource(s) (identified in the above list) on the subject land.
Adjusted Gross Income (AGI) Limitation Waiver Request Worksheet for Conservation Reserve Program (Continued)

Section 5: Package Submission Requirements

Include the following in the submission package: (all items required):

- [ ] Overview of the conservation practice(s)/activity to be implemented on the environmentally sensitive land, describe the current resource baseline condition and the future condition, include objectives and describe how this project(s) on the producer’s land is a critical or integral component in achieving federal, regional, tribal or state plan objectives (i.e., size of the land area under review in relation to the amount of critical areas to be addressed or needing treatment).

- [ ] National, regional, state, or Tribal Plan referenced in Section 3. (Provide copy of pertinent information from the plan and appropriate web link, if a web link to document is available on the internet).

- [ ] Aerial photograph of the producer’s land to be enrolled in the USDA program and surrounding project area. (Identify on the photograph the planned conservation practice(s)/activities).

- [ ] Letter of support from federal (other than FSA)/Tribal/State Agency or regional commission within expertise regarding the critical resource (e.g. the project will benefit threatened and endangered species, a letter of support from US Fish and Wildlife Service and/or the State Fish and Wildlife Agency).

- [ ] Producer’s written request for the AGI waiver.

Section 6: Certification

STC

I have completed a review of this AGI waiver request package and find it to be complete. (If not supported, file for further reference)

- [ ] Support  [ ] Do Not Support, Reason: __________________________

STC: __________________________ Date: __________________________

Administrator Approval

- [ ] Approved  [ ] Not Approved, Reason: __________________________

Administrator: __________________________ Date: __________________________

Note: Waiver determinations for conservation programs will be based on the year for which the conservation program contract or agreement is approved and the determination will apply for the entire term of the subject agreement or contract.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or part of an individual's income is derived from any public assistance program. The following is an example of a completed CRP-1.

---

This form is available electronically.

CRP-1  U.S. DEPARTMENT OF AGRICULTURE
(03-26-04) Commodity Credit Corporation

CONSERVATION RESERVE PROGRAM CONTRACT

NOTE: The authority for collecting the following information is Pub. L. 107-171. This authority allows for the collection of information without prior CRP approval mandated by the Farm Security and Rural Investment Act of 2002 (Pub. L. 107-171) and regulations promulgated at 7 CFR Part 1410 and the Internal Revenue Code (26 USC 6109). The information requested is necessary for CCC to process and order the funds to enter into a Conservation Reserve Program Contract, to assist in determining eligibility, and to determine the correct parties to the contract. Furnishing the requested information is voluntary. Failure to furnish the requested information will result in determination of ineligibility for certain program benefits and other financial assistance administered by USDA agency. This information may be provided to other agencies, IRS, Department of Justice, or other State and Federal Law enforcement agencies, and in response to a court magistrate or administrative tribunal. The provisions of criminal and civil fraud statutes, including 18 USC 266, 287, 371, 641, 651, 1001, 15 USC 714m; and 31 USC 3729, may be applicable to the information provided. RETURN THIS COMPLETED FORM TO YOUR COUNTY FSA OFFICE.

C Distributing CRP-1

Distribute CRP-1, after it has been completed and all signatures have been obtained, as follows:

- keep original in files
- provide a copy to the following:
  - owner
  - participant other than owner, if any
  - NRCS.
EBI and National Ranking Factors

1 EBI

A Background

EBI has been used by USDA to prioritize and rank CRP offers since signup 10.

B EBI Process and Factor Scoring

The National EBI process will be used to rank and prioritize offers for enrollment into CRP for general signup offers.

Producers must be provided a fact sheet describing EBI. FSA shall review the fact sheet with producers to ensure that producers are aware of the scoring process used for EBI. Producers shall sign CRP-2 to certify that they were informed of EBI and opportunities to enhance their score.

*--FSA will review EBI scoring parameters with the producers and encourage the planting of new or maintaining of existing cover types and conservation measures, if appropriate, that will provide higher environmental benefits. FSA employees must notify producers that submitting offers with annual rental payments less than the maximum payment rate will result in higher EBI scores.

C Overview of the National EBI

The National EBI includes 5 environmental ranking factors and a cost factor.

- N1, Wildlife Habitat Cover Benefits
- N2, Water Quality Benefits From Reduced Erosion, Runoff and Leaching
- N3, On-Farm Benefits of Reduced Erosion
- N4, Enduring Benefits
- N5, Air Quality Benefits
- N6, Cost.

EBI provides a relative ranking of estimated environmental benefits and cost for land offered for CRP.

\[ N1 + N2 + N3 + N4 + N5 + N6 = \text{National EBI Score.} \]
EBI and National Ranking Factors (Continued)

1 EBI (Continued)

C Overview of the National EBI (Continued)

The following table illustrates the National ranking factors.

<table>
<thead>
<tr>
<th>Factor</th>
<th>Maximum Points</th>
<th>Equation/Scoring Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>N1</td>
<td>100</td>
<td>Wildlife Habitat Cover Benefits (10 to 100 points) N1 = (N1a + N1b + N1c) where:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• N1a is the cover subfactor (10 to 50 points)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• N1b is Wildlife enhancements (0, 5, or 20 points)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• N1c is Wildlife priority zones (0 or 30 points).</td>
</tr>
<tr>
<td>N2</td>
<td>100</td>
<td>Water Quality Benefits From Reduced Erosion, Runoff, and Leaching (0 to 100 points) N2 = (N2a + N2b + N2c) where:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• N2a is the water quality zones subfactor (0 or 30 points)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• N2b is the groundwater quality subfactor (0 to 25 points)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• N2c is the surface water quality subfactor (0 to 45 points).</td>
</tr>
<tr>
<td>N3</td>
<td>100</td>
<td>On-Farm Benefits of Reduced Erosion (0 to 100 points)</td>
</tr>
<tr>
<td>N4</td>
<td>50</td>
<td>Enduring benefits point range (0 to 50 points)</td>
</tr>
<tr>
<td>N5</td>
<td>45</td>
<td>Air Quality Benefits (0 to 45 points) N5 = N5a + N5b + N5c + N5d where:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• N5a is the wind erosion impacts subfactor (0 to 25 points)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• N5b is the wind erosion soils list subfactor (0 or 5 points)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• N5c is the air quality zone (0 or 5 points)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• N5d is carbon sequestration factor (0 to 10 points).</td>
</tr>
<tr>
<td>N6</td>
<td>/1</td>
<td>N6 = N6a + N6b where:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• N6a is the cost factor</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• N6b is the offer is less than maximum payment rate (0 to 25 points).</td>
</tr>
</tbody>
</table>

1/ Points assigned to cost factor will be determined after signup ends and all the offers are evaluated. This factor will be based on the rental rate offered and the maximum payment rate.
2 National Ranking Factor N1 - Wildlife Habitat Cover Benefits

A Summary

10 to 100 points determined using subfactors in the formula:

N1a + N1b + N1c = N1

Wildlife species, both game and nongame, benefit most from the availability of appropriate wildlife habitat. CRP provides the opportunity to develop habitat that will benefit a variety of wildlife species.

Note: Producers with existing cover shall be informed that C/S may be available for cover enhancement.

This factor encourages landowners to plant cover on contract acreage that will be beneficial to wildlife. Subfactor N1a assigns a score to the quality of the cover to be applied to the practice.

Existing CRP covers on acreage being offered for re-enrollment may be improved to provide better wildlife habitat and increase the N1a subfactor score for the offer. Subfactor N1a points are awarded based on the weighted average point score associated with the offered acreage by practice point score.

Approved cover is expected to be seeded or planted within 12 months of the effective date of CRP-1. However, TSP may * * *, in developing the conservation plan, * * * permit an additional 12 months, not to exceed 24 continuous months, to seed the approved cover. This flexibility should be permitted to allow the establishment of approved cover in a manner that will not adversely impact the natural resources of the site or surrounding area.

For each practice, the conservation plan shall include:

- management activity or activities to maintain or enhance the plant community diversity and plant vigor
- a schedule of maintenance activities and various maintenance options.
EBI and National Ranking Factors (Continued)

2 National Ranking Factor N1 - Wildlife Habitat Cover Benefits (Continued)

B Subfactor N1a - Cover

Cover and practices beneficial to wildlife (10 to 50 points maximum). The Wildlife Habitat Cover Benefits Factor (N1a) will provide practice seeding mixes and management options that provide habitat for important and declining species of national, regional, State, or local significance in each State. NRCS State Biologist will work with the NRCS State Plant Materials Specialist, State Wildlife Agency and FWS to revise or develop seeding mixes and management recommendations for the above mentioned species or groups of species. Nonaggressive introduced species may be used for up to 2 species in the mixes. The number of seeding mixes developed is up to each State. Special seeding mixes and planting rates may be developed for arid areas and areas of limited native seed availability -- subject to approval by DAFP.

Seeding mixes should to the maximum extent practicable be comprised of locally collected native “eco-type” (seed mixes native to local area) seed for native seedings.

On the land with existing/expiring CRP acreage, the offer should be ranked on the desired plant community that the producer plans on establishing or maintaining for the site.

Example 1: A producer with an existing stand of a monoculture of crested wheatgrass would like to reenroll the entire stand. The producer would like to enhance the stand to 4 species of introduced grasses, including at least 1 forb or legume. The offer would be ranked as a 40 point CP1 stand.

Example 2: A producer with an expiring CRP contract that was originally planted to a monoculture of western wheatgrass (native grass) would like to reenroll into CRP. During the CRP contract period of the last 10 years, a number of native grasses, forbs, and legumes have naturally generated into the existing CRP cover stand. The producer believes that the site has evolved into a 50 point CP2 cover stand. The producer offers the site as a 50 points CP2 cover. The offer is ranked as a 50 point CP2 cover. During the conservation planning process a site visit indicates that only 2 native grasses and 1 forb are in the cover. The producer is required to inter-seed into the stand to achieve the 50 point cover for which the offer was scored.--*
EBI and National Ranking Factors (Continued)

2 National Ranking Factor N1 - Wildlife Habitat Cover Benefits (Continued)

B Subfactor N1a - Cover (Continued)

CP/Cover Matrix

Evaluate this subfactor based on the covers expected to become established. FSA or TSP shall only allow those covers that are suitable for the site designated for the offer.

<tr>
<td>Existing stand or planting (minimum of .5 acres) of a diverse mix of multiple species suited for pollinators</td>
<td>50--*</td>
</tr>
</tbody>
</table>

1/ Cover that is existing or will be established must accomplish the purpose of the practice.--*

2/ State Conservationist may revise FOTG on planting rate to be consistent with CRP.

3/ CP12 acreage is not included in the weighted average point score. For example, a 50-acre offer with a 45-acre CP25 planting and a 5-acre food plot calculates the weighted average using only the 45 acres of CP25 planting.

   45 acres x 50 points (CP25 point score) = 2250 points
   *--2250 points divided by 45 acres = 50 points--*

4/ Technical practice standards for the selected habitat type must meet applicable standards and be approved by DAFP at least 30 calendar days before the beginning of signup.
EBI and National Ranking Factors (Continued)

2 National Ranking Factor N1 – Wildlife Habitat Cover Benefits (Continued)

C Subfactor N1b – Cover

For general signups up through signup 39, producers can receive 20 points under sub-factor N1b for creating a wildlife water development if both the following apply:

- Water is a limiting factor based on the following:
  
  If there is no water for wildlife from a lake, pond, stream, wetland, spring, irrigation canal, drainage ditch, or similar source located within or immediately adjacent to the tract which provides water from late spring through early fall in an average year, then water will be considered a limiting factor. If there is a source of water on the tract for this period, water will not be considered a limiting factor. Wildlife water developments commonly referred to as “guzzlers”, on other CRP land in the tract with a different contract period than the current offer will not be considered a water source.

  Exception: If there is a water source as described above, within or immediately adjacent to the tract, but every point within the offered acreage is not within ½ mile of the water source(s), water will be considered limiting.

- Wildlife water developments are installed according to NRCS Technical Standard 648.

*--Producers can receive 20 points under sub-factor N1b for converting a monoculture to a mixture of native species. At least a portion of the offered acres must be planted to a monoculture such as crested wheatgrass, and at least 51% of that acreage must be converted to a 50 point mixture of native species.

The maximum points available under N1b are 20.--*
2 National Ranking Factor N1 - Wildlife Habitat Cover Benefits (Continued)

C Subfactor N1b - Cover

Subfactor N1b - Wildlife Improvement (0 to 20 points maximum).

Producers must be notified that, if accepted in CRP, food plots must be maintained for the term of CRP-1. Producers offering food plots must be notified of the planting and maintenance requirements before the offer is submitted.

Points are based on the following table. Maximum point score is 20 points. The factors are not additive.

Producers must be informed before signup that the acreage must be maintained for the life of the contract according to practice standards.

Note: CP12, the NRCS FOTG standard, is limited by the lesser of either 10 percent of the field size or 5 acres/field for the food plot. The 5 acres of food plot may be either one 5-acre food plot or 2 or more food plots where the cumulative total would be <5 acres.

1/ At least 51 percent of the land enhanced must be on a stand comprised of primarily a monoculture (fescue, crested wheatgrass, bermuda grass, etc.) on expired (such as a contract that expired in 2010) and/or expiring CRP land. In the case of a monoculture of trees (such as loblolly pine), the contract shall be on land expiring.

Note: Expiring CRP land with trees loses its cropland status after the expiration of the contract.

Points are not awarded for land in a crop production (wheat field, corn ground, etc.).
EBI and National Ranking Factors (Continued)

2 National Ranking Factor N1 - Wildlife Habitat Cover Benefits (Continued)

D Subfactor N1c - Wildlife Priority Zones

Location where proposed land may contribute to restoration of habitat of Threatened or Endangered Species or contribute to the restoration of important and declining species of National, Regional, State, or Local Significance. Restoration of rare and declining native habitat (Long Leaf Pine, Tall Grass Prairie, etc.) may also be addressed. (0 or 30 points maximum)

Assign 30 points if at least 51 percent of the offered acreage is within an approved area and the weighted average N1a score is greater than or equal to 40 points.—*

STC shall submit geographic areas (whole counties or 8-, 10-, * * * or 12-digit HUC) the specific conservation practices and the species of concern or specific habitat restoration, such as tall grass prairie, that would be addressed by the habitat restoration.

* * *

3 National Ranking Factor N2 - Water Quality Benefits From Reduced Erosion, Runoff, and Leaching

A Summary

0 to 100 points determined by adding subfactors using the formula: N2 = N2a + N2b + N2c

CRP can improve water quality by reducing:

• sediment, nutrients, and other pollutants from entering the Nation’s water courses and aquifers

• downstream flood damage through the restoration of hydrology

• the leaching of nitrates and pesticides into groundwater.
EBI and National Ranking Factors (Continued)

3 National Ranking Factor N2 - Water Quality Benefits From Reduced Erosion, Runoff, and Leaching (Continued)

A Summary (Continued)

Water quality benefits are dependent on the:

- extent to which erosion, runoff, and leaching are reduced
- population that may be affected
- location of the CRP acreage:
  - with respect to water resources
  - within priority water quality areas.

B Subfactor N2a - Water Quality Zones

Location where proposed land may contribute to groundwater or surface water quality impairment and to assist in meeting Federal, State, or local water quality laws. (0 or 30 points maximum)

Assign 30 points if at least 51 percent of the offered acreage is within zones recommended by the State Technical Committee and STC and approved by DAFP as high priority water resources.

STC shall:

- consult with the State Technical Committee in developing recommendations
- take into consideration that a goal of EBI is to provide gradation of offers
- prioritize and approve only the highest priority water resources of the State.

Only the highest priority zones shall be approved.

A minimum of at least 51 percent of the offered acreage must be within the designated area to be awarded points. Otherwise, assign 0 points.

C Subfactor N2b - Groundwater Quality

Groundwater quality benefits score (0 to 25 points maximum).

The leach index characterizes the inherent potential for the movement of nutrients and pesticides for a specific soil. The index is based on soil properties, including particle size and organic matter.
EBI and National Ranking Factors (Continued)

3 National Ranking Factor N2 - Water Quality Benefits From Reduced Erosion, Runoff, and Leaching (Continued)

C Subfactor N2b - Groundwater Quality (Continued)

The COLS software determines the weighted average leach index for the 3 predominant soils and looks up the appropriate county specific value. Table values are based on:

- leach index for acres offered
- county pesticide leaching potential
- county nitrogen leaching potential
- population obtaining drinking water from wells in each county.

Example: A 110-acre field is offered composed of 2 soil map units. 70 acres have a leach index of 1, and the remaining 40 acres have a leach index of 3. The average leach index is 
\[
(70 \times 1) + (40 \times 3) ÷ 110 = 1.73,
\]
which is rounded to the nearest whole number 2. Based on the following sample table, if the acres were located in Barbour County, Alabama, a value of 12 would be entered for subfactor B.

<table>
<thead>
<tr>
<th>County</th>

D Subfactor N2c - Surface Water Quality

Surface water quality benefits score. (0 to 45 points maximum)

This subfactor evaluates the:

- potential amount of sediment that is delivered to water courses
- population within the watershed that would benefit most directly from improved surface water quality
EBI and National Ranking Factors (Continued)

3 National Ranking Factor N2 - Water Quality Benefits From Reduced Erosion, Runoff, and Leaching (Continued)

D Subfactor N2c - Surface Water Quality (Continued)

- the stream density and estimated sediment loadings that occur because of agriculture.

EPA studies have found that sediment is the primary water quality problem in the majority of rivers and streams.

The software tool will determine the weighted average RKLS for the 3 predominant soils for the offered acreage. Round RKLS to the nearest whole number using normal rules of rounding. Use the appropriate table value for the watershed in which at least 51 percent of the acreage is physically located.

For example:

<table>
<thead>
<tr>
<th>Watershed</th>
<th>&lt; 4</th>
<th>4 ≤ RKLS &lt; 7</th>
<th>7 ≤ RKLS &lt; 11</th>
<th>11 ≤ RKLS &lt; 23</th>

</tbody>
</table>

4 National Ranking Factor N3 - On-Farm Benefits of Reduced Erosion

A Summary

On-Farm Benefits of Reduced Erosion. (0 to 100 points maximum)

The score for the weighted average EI for the 3 predominant soils on the land offered is determined by the greater of EI for:

- sheet and rill erosion (based off of RUSLE)
- wind erosion (based off of wind erosion equation).

Note: EI must be a whole number. Use normal rules of rounding.

Use the highest EI value (for the 3 predominate soils of the acreage offered) of either sheet and rill or wind erosion (do not add together). Use the table in subparagraph B to award points for the offer based on the highest EI value.
EBI and National Ranking Factors (Continued)

5 National Ranking Factor N4 - Enduring Benefits

A Summary

Enduring Benefits Beyond CRP-1 Period. (0 to 50 points maximum)

The N4 evaluates the likelihood that the practice established will persist and be maintained beyond the life span of CRP-1 and will provide benefits beyond the contract period.

Land established with certain existing vegetation types, such as hardwood trees, softwood trees, or shrubs, is less likely to be returned to crop production after contract expiration. In addition, land re-established to a wetland ecosystem, or rare or declining habitat, is also less likely to return to crop production at the end of the contract period.

The N4 score is the sum of the weighted average scores using the N4 table provided below. To determine the N4 value, calculate the weighted average value for all practices using the N4 table. Round the result to the nearest whole number using the normal rules of rounding.

Use the following table to award N4 points. Score zero points if none of the following practices are offered.

Note: The practice selected must be appropriate for the site. Trees should not be selected on sites where trees are not a part of the ecosystem. For example: A tree stand should not be planted on a site where the climax vegetation for the site is range. The vegetation should be consistent with the ecosystem of the site.

Important: Food plots (CP12) are awarded 0 points.

<table>
<thead>
<tr>

<td>0</td>
</tr>
</tbody>
</table>
EBI and National Ranking Factors (Continued)

5 National Ranking Factor N4 - Enduring Benefits (Continued)

A Summary (Continued)

Determine the weighted average value for enduring benefits using the appropriate value in the N4 table times the appropriate acres. Divide the sum by the total acres on the offer. Round the result to the nearest whole number using the normal rules of rounding. The result is the N4 score.

*--Example: A 100-acre office is comprised of 50 acres of new hardwood planting (CP3A) and 50 acres of existing pine trees (CP3).

The N4 score is:
50 acres of (CP3A) hardwoods (with a practice status of “N”) X 50 points/acre = 2,500 points
50 acres of (CP3) pine (with a practice status of existing) X 20 points/acre = 1,000 points

3,500 points
3,500 points ÷ 100 acres = 35 points

N4 score = 35 points.
EBI and National Ranking Factors (Continued)

6 National Ranking Factor N5 - Air Quality Benefits From Reduced Wind Erosion

A Summary

National Ranking Factor N5 - Air Quality Benefits From Reduced Wind Erosion

This factor evaluates air quality improvements from reducing airborne dust and particulate (PM 10) from cropland wind erosion that causes damage to nearby affected population concentrations. In addition it provides points for the value of CRP land for Carbon Sequestration. (3 to 45 points maximum)*

The formula is: \( N5 = N5a + N5b + N5c + N5d \).

The air quality factor is comprised of 4 components. The first component (N5a) is based on the potential wind erosion, distance weighted population that may be impacted by wind erosion. The potential wind erosion erodibility shall be based on the weighted average value for the climatic factor (C) and soil erosion index (I).

The second component (N5b) is the impact associated with wind erosion of soils that contain material which is likely to be suspended in the air. Acreage offered is comprised of at least 51 percent or more of soils that are either of the following will be awarded 5 points:

- volcanic soils, or soils that are covered with volcanic material
- soils that are formed in organic material.

The third component (N5c) evaluates areas:

- where agriculture significantly impacts air quality (nonattainment of air quality standards)
- that are located within 50 miles of Class 1 air quality areas (National Parks with high quality air standards).

The forth component (N5d) provides points based on the relative ability to sequester carbon. This factor is based on the weighed average for the conservation practices using the N5d table.
EBI and National Ranking Factors (Continued)

6 National Ranking Factor N5 - Air Quality Benefits From Reduced Wind Erosion (Continued)

B Wind Erosion Impacts, Subfactor N5a

This subfactor evaluates wind erosion impacts. (0 to 25 points maximum)

Determine the county in which the majority of the acreage offered is physically located. Determine the weighted CI factor of the acreage offered. Using the revised county air quality table and the weighted CI factor the automated system will calculate the air quality points for factor N5a. These tables will only be used if the C value (wind erosion equation) is equal to or greater than 7. Otherwise, a value of 0 is awarded for N5a subfactor.

Note: The tables reflect the potential wind erosion, the number of potential people that may be impacted, and the distance population is from the source of wind erosion. Population near the source of the wind erosion is weighted significantly higher than downwind population sources. For example, the impacts of wind erosion on 1 person near the site would equal the impacts of 100 people that are located 100 miles from the site.

For example:

<table>

</tbody>
</table>

C WESL, Subfactor N5b

WESL (0 or 5 points maximum)

WESL is a list that contains map units that have the dominant component of a soil that formed in organic or volcanic material, or a soil covered with volcanic material. These soils have material in the surface layer that can become airborne, and have a high potential of being suspended in air during wind events. These soils can significantly contribute to nonattainment of PM10 air quality standards. WESL should be developed for each county that have these map units on the soils legend in FOTG.

*--Any offer in which at least 51 percent of the offered acres are comprised of soil on WESL--*
shall be provided 5 points for factor N5b.
EBI and National Ranking Factors (Continued)

6 National Ranking Factor N5 - Air Quality Benefits From Reduced Wind Erosion (Continued)

D Air Quality Zones, Subfactor N5c

(0 or 5 points maximum)

The State Technical Committee working with State and EPA air quality representatives shall recommend designated agricultural zones that contribute to the nonattainment of air quality standards to FSA. Air quality zones shall be designated on an entire county or HUC basis. FSA shall prepare a database of designated air quality zone. All CPA’s approved for air quality shall be considered to be within these zones.

The State Technical Committee may also recommend zones within 50 miles of a Class 1 air designated area in which agricultural crop production could impact air quality standards. Documentation, such as existing monitoring data that agriculture contributes to or has potential to violate existing air quality standards, is required.

Note: The State Technical Committee shall consult with the State air quality official for the latest Class 1 designations.

The offer is awarded 5 points if both of the following conditions are met:

- at least 51 percent of the offer must be in the designated zones
- the weighted wind EI must be equal to or greater than 3.0.
EBI and National Ranking Factors (Continued)

6 National Ranking Factor N5 - Air Quality Benefits From Reduced Wind Erosion (Continued)

E Carbon Sequestration, Subfactor N5d

N5d Carbon Sequestration Factor (0 to 10 points maximum)

This factor provides a relative index of the projected carbon sequestration benefits of CRP cover types over the expected life of the practice. This is a weighted average for the all practice on the contract using the values in the table.

<table>

7 National Ranking Factor N6 - Cost

A Summary

The points will be determined using the formula: \( N6 = N6a + N6b \)

The cost factor provides weight to assist in optimizing environmental benefits per dollar of CRP rental payments. Greater weight is provided to offers with lower costs.

B Subfactor N6a - Cost

The number of points will be determined after signup ends and will be based on the producer rental rate offer.

Note: Offers with lower per acre rental rates may increase the probability that the offer will be acceptable.
EBI and National Ranking Factors (Continued)

7 National Ranking Factor N6 - Cost (Continued)

C Subfactor N6b - Offer Less Than the Maximum Payment Rate

Offers below the maximum payment rate (0 to 25 points).

*--Offers for which the Rental Rate Per Acre Offered is below the maximum per acre payment--* rate, on a percentage basis, are award points. The formula to calculate the percentage below maximum payment rate is: \[1 - \left(\frac{\text{Rental Rate Per Acre Offered}}{\text{maximum payment rate}}\right)\].

Points will be awarded for whole percent below the maximum payment rate, based on the *--following. Percentage values are \textbf{truncated} to a whole number.--*\

**Examples:**

The maximum payment rate for an offer is $100 per acre. The producer offers a per acres rental rate of $90. The offer is 10 percent below the maximum payment rate. The offer is awarded 20 points.

The maximum payment rate for an offer is $100 per acres. The producer offers a per acres rental rate of $89.10. The offer is 10.9 percent below the maximum payment rate. The offer is awarded 20 points.
The following is an example of CRP-1 Appendix.

---

This form is available electronically.

CRP-1 (Appendix)
(05-07-13)

U. S. DEPARTMENT OF AGRICULTURE
Commodity Credit Corporation

APPENDIX TO FORM CRP-1, CONSERVATION RESERVE PROGRAM CONTRACT

NOTE: The authority for collecting the following information is Pub. L. 107-171. This authority allows for the collection of information without prior OMB approval mandated by the Paperwork Reduction Act of 1995. The time required to complete this information collection is estimated to average 3 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

1. DEFINITIONS

The following definitions are applicable to the Conservation Reserve Program (CRP) Contract:

A. **CRP contract or CRP-1** means the program documents including form CRP-1, the applicable contract appendix, conservation plan and the terms of any required easement, if applicable, entered into between CCC and the participant. Such contract shall set forth the terms and conditions for participation in the CRP and receipt of CRP payments.

B. **Current agricultural market value** for offer evaluation purposes means the amount in dollars per acre as determined by CCC to be the adjusted price at which the land placed in the CRP could be rented based on the average cash rental rate, or equivalent, per acre, and which is paid for dryland cropland at the time at which this contract is signed by the participant.

C. **Vegetative cover** means perennial or permanent grasses, legumes, forbs, and shrubs with a life span of 10 years or more, or trees.

D. All other words and phrases, unless the context of subject matter otherwise requires, shall have the meanings assigned to them in the regulations governing the Conservation Reserve Program which are found at 7 CFR Part 1410.

2. ELIGIBILITY REQUIREMENTS FOR CONSERVATION RESERVE PROGRAM

A. By signing the CRP contract, the participant, except in the case of persons qualifying solely as a tenant, certifies that such participant will control the land subject to the contract for the contract period and, if applicable, any easement period and shall, upon demand, provide evidence to CCC demonstrating that such participant will control the land for that period.

B. Land otherwise eligible for the CRP shall not be eligible, except as agreed otherwise, in writing, by CCC, if the land is subject to a deed or other restriction prohibiting the production of agricultural commodities or where a benefit has or will be obtained from a Federal agency in return for the participant's agreement not to produce such commodities on the land during the same time as the land would be enrolled in the CRP. By offering land for enrollment, the participant certifies as a condition for payment that no such restrictions apply to such land.

3. RESTRICTIONS ON PAYMENTS TO FOREIGN PERSONS

A. Any person who enters into this CRP contract or participates in such contract at any time who is not a citizen of the United States or an alien lawfully admitted into the United States for permanent residence under the Immigration and Nationality Act (8 U.S.C. 1101 et. seq.) shall be ineligible to receive annual rental payments under this contract unless such person meets the requirements of 7 CFR Part 1400 which shall be applicable to this contract.

B. Persons succeeding to a CRP contract subject to a reduction in payment under this paragraph 3 for any preceding party shall not be eligible for payments during the contract period greater than those that could have been received by such preceding party.
4. AGREEMENT

A. The participant agrees:

(1) That the applicable CRP-2 and CRP-1 and its addenda shall be considered an offer to enter into the Conservation Reserve Program on the terms specified on Form CRP-1 and its addenda. The offer, until revoked, may be accepted by CCC provided further, that liquidated damages may apply in the case of a revocation as specified elsewhere in this Appendix;

(2) To place eligible land into the CRP for a period of 10 years, or as agreed to by CCC for a longer period not to exceed 15 years, from the effective date of the CRP contract executed by CCC;

(3) To comply with the terms and conditions of the Conservation Plan;

(4) To establish, maintain, and replace, as specified in the CRP contract, the practices agreed to in the Conservation Plan;

(5) Not to harvest or sell, nor otherwise make commercial use of, trees or forage or other cover on the CRP land including the harvesting or shaping of trees for future use as Christmas trees (the participants may conduct pruning, thinning, stand improvement, or other activities consistent with customary forestry practices on land that is planted to trees); provided further, however, that CCC may, in its discretion and only in writing or by publication intended for a general allowance for CRP lands in particular States or regions, permit, in certain emergencies, certain commercial uses, as specified by CCC, which may be conditioned on a reduction in CRP payments otherwise payable under this contract;

(6) Not to undertake any action on land under the participant’s control which tends to defeat the purposes of this contract, as determined by CCC;

(7) To annually certify crop and land use for the farm with the CCC on the appropriate form, accurately listing all land enrolled in CRP on the farm, not later than the final reporting date determined and announced by the Farm Service Agency, or successor agency;

(8) To control on land subject to a CRP contract all weeds, insects, pests and other undesirable species to the extent necessary to ensure that the establishment and maintenance of the approved cover is adequately protected and to provide such maintenance as necessary to avoid an adverse impact on surrounding land, taking into consideration water quality, wildlife and other factors;

(9) Not to disturb the acreage under contract during the primary nesting and brood rearing season for wildlife, except as approved by CCC;

(10) To annually file required forms as requested by CCC for payment limitation determinations. For purposes of the annual payment limitation for each participant, Signing Incentive Payments (SIP) and Practice Incentive Payments (PIP) shall be attributed towards such annual limitation in the following ways: 1) SIP, for purposes of this contract, shall be attributed to the Fiscal Year in which the participant’s CRP contract was approved by CCC; and 2) PIP, for purposes of this contract, shall be attributed to the Fiscal Year in which the participant completed the practice associated with that PIP, as evidenced by the participants signature date on Form AD-245 or FSA-848B, and as otherwise determined by CCC.

(11) To file applicable forms required by CCC for Adjusted Gross Income (AGI) determinations;

(12) That it is understood any payment or portion thereof due any participant will be made by CCC without regard to any question of title under State law, and without regard to any claim or lien which may be asserted by a creditor, except agencies of the U. S. Government. Offsets for debts owed to agencies of the U. S. Government shall be made prior to making any payments to participants or their assignees.

(13) To perform certain periodic management activities described in the conservation plan to maintain the approved cover such as light discing, burning, etc.
B. CCC agrees, subject to the availability of funds:

(1) To share the cost with owners and operators of establishing an eligible practice, or an identified unit thereof, agreed to in the Conservation Plan as described herein, except that, in no case may the share of CCC exceed an amount equal to 50 percent of the price at which the land placed in the CRP could be sold for use as farmland at the time at which this contract is signed by the participant, unless the CCC otherwise approves such amount, provided further, that such approval must specifically reference the particular land placed in the CRP under this contract;

(2) To pay the agreed-upon annual rental payment, including any incentive payment, based upon the shares to which the parties have agreed as set forth on Form CRP-1 for a period of years not in excess of the contract period;

(3) To pay to the participant, to the extent required by CCC regulations, an interest penalty on cost-share payments, incentive payments, and all annual rental payments not made by the date, as determined by CCC, that the payment is due;

(4) To make annual rental payments after October 1 of each year of the contract period.

5. CONSERVATION PLAN

A. Subject to the approval of CCC, the Conservation Plan will include some or all of the following information and requirements:

(1) The vegetative or water cover to be established on the CRP land;

(2) A tree planting plan, developed in cooperation with the Forest Service, if trees are to be established as the vegetative cover on the CRP land;

(3) A schedule of completion dates for establishment of the cover on the CRP land;

(4) The level of environmental benefits which must be attained on the CRP land;

(5) Any other practices required for the establishment or maintenance of the cover on the CRP land including weed, insect, pest, and other controls of undesirable species, and such maintenance as necessary to avoid an adverse impact on surrounding land as determined appropriate by CCC, taking into consideration the needs of water quality, wildlife concerns, and other factors.

(6) The acreage will not be disturbed during the primary nesting season for wildlife as determined by CCC.

(7) Management activities authorized by paragraph 6.

B. By signing the Conservation Plan, the participant agrees to implement the practices specified in such Conservation Plan on the CRP land even if such practices differ from those listed on Form CRP-1.

6. MANAGEMENT ACTIVITIES

Subject to the approval of CCC, the Conservation Plan may include managed grazing or harvesting of the cover on the CRP land, including biomass, as necessary to avoid an adverse impact on surrounding land, as determined appropriate by CCC, taking into consideration the needs of the vegetative cover, wildlife concerns, and other factors. Managed grazing or harvesting may be conditioned on a reduction in CRP payments otherwise payable under this contract, as determined by CCC.
7. COST-SHARE PAYMENTS

A. Subject to the availability of funds, cost-share payments shall be made available upon a determination by CCC that an eligible practice, or an identifiable unit thereof, has been established in compliance with the conservation plan and with appropriate standards and specifications.

B. CCC will not make cost-share payments in excess of 50 percent of the actual or average cost of establishing the eligible practice specified in the Conservation Plan as determined by CCC. It is understood that all cost-shares from all sources must be reported to CCC and that a reduction in the CCC cost-share may be made if there are other cost-shares received. Such reductions will be made to the extent required or allowed by the program regulations.

C. Except as otherwise provided for in program regulations, cost-share assistance may be made available under the CRP only for the establishment or installation of an eligible practice. In order to receive cost-share assistance, the participant, upon completion of the practice, must file Form AD-245 or similar form approved by CCC, for approval by CCC.

8. PROVISIONS RELATING TO TENANTS AND LANDLORDS

A. Payments shall not be paid under this CRP contract if CCC determines that:

   (1) The landlord or operator has:

      (a) when the acreage offered is not enrolled in the CRP at the time of signup:

         (i) not provided tenants who have an interest in the acreage being offered at the time of signup an opportunity to participate in the benefits of the program;

         (ii) reduced the number of tenants on the farm as a result of or in anticipation of enrollment in the CRP.

      (b) when the acreage offered is enrolled in the CRP at the time of signup, not provided tenants with an interest in the CRP contract acreage an opportunity to participate in the benefits of the program if:

         (i) the tenants are otherwise involved in farming other acreage, as determined by CCC, on the farm at the time of signup; or

         (ii) the tenants have an interest in the acreage being offered on the effective date of the new CRP-1.

   (2) The landlord or operator has deprived any tenant of any benefits to which such tenant would otherwise be entitled.

   (3) If any such conditions as identified in (1) and (2) occur or are discovered after payments have been made, all or any part of the payments, as determined by CCC, must be refunded with interest and no further payments shall be made.

B. After this CRP contract is approved, the operator or tenant may, with the approval of CCC, be replaced for purposes of the CRP contract and for payments to be made under the contract if such tenant or operator, as determined by CCC:

   (1) terminates their tenancy voluntarily or for some reason other than being forced to terminate their tenancy by the landowner or operator in anticipation as, or because of, participation in the program;

   (2) fails to maintain tenancy, as determined by CCC, throughout the CRP contract period;

   (3) files for bankruptcy and the trustee or debtor in possession fails to affirm this CRP contract;

   (4) dies during the term of this CRP contract and the administrator of the operator or tenant’s estate (or a similar person with authority to administer the affairs of the operator or tenant) fails to succeed to this contract within the time required by CCC, or

   (5) was removed for cause, as determined by CCC.
The removal of an operator or tenant from the agreement shall not release the operator or tenant from liabilities for actions arising before such removal.

9. ERRONEOUS REPRESENTATION AND SCHEME AND DEVICE

A. A participant who is determined to have erroneously represented any fact affecting a determination with respect to this CRP contract and the regulations applicable to this CRP contract, adopted any scheme or device which tends to defeat the purposes of this CRP contract, or made any fraudulent representation with respect to this contract will not be entitled to payments or any other benefits made in accordance with this CRP contract and the participant must refund to CCC all payments received by such participant, plus interest and liquidated damages thereon, with respect to the CRP contract. Such liquidated damages will be determined in accordance with paragraph 10 of this Appendix.

B. Unless CCC regulations provide otherwise, refunds determined to be due and owing to CCC in accordance with this CRP contract will bear interest at the rate which CCC was required to pay for its borrowings from the United States Treasury on the date of the disbursement by CCC of the money to be refunded. Interest will accrue from the date of such disbursement by CCC.

C. The remedies provided under paragraph 9A of this Appendix shall be applicable in addition to any remedies under criminal and civil fraud statutes, including 18 U.S.C. 268, 287, 371, 641, 1001; 15 U.S.C. 714m; and 31 U.S.C. 3729, or any other remedy available under law.

10. LIQUIDATED DAMAGES

It is mutually agreed that in the event the CRP contract is breached by the participant, the CCC will suffer substantial damages which may not be possible to quantify with certainty. Therefore, in addition to the refund of payments received plus interest due, for breach of contract prescribed in this contract, the participant agrees to pay an amount equal to the product obtained by multiplying: (1) 25 percent of the rental payment rate per acre on Form CRP-1 by, (2) the number of acres that are the subject of the CRP contract. Such amount shall be due as liquidated damages in addition to such other damages or amounts as may be due, and not as a penalty.

11. NOTIFICATION OF CHANGES TO TERMS AND CONDITIONS OF THE CONTRACT

CCC agrees that, if any changes of any terms and conditions of this CRP contract, including changes necessary to reconcile the practices listed on the CRP-1 to those specified in the conservation plan, become necessary prior to the date that this contract is approved on behalf of CCC, CCC will notify the persons signing the CRP-1 of such change and such person will be given 10 days from the date of notification in which to agree to the revised terms and conditions or to withdraw from the offer. The participant agrees to notify the CCC of an intention to withdraw from the offer within 10 days from the date of the issuance of such notice and further agrees that failure to notify the CCC will constitute agreement to the revised terms and conditions.

12. CORRECTIONS

CCC reserves the right to correct all errors arising from entering data or computations in the contract.

13. TERMINATION OF CONTRACT, JOINT LIABILITY

If a participant fails to carry out the terms and conditions of this CRP contract but CCC determines that such failure does not warrant termination of this CRP contract, CCC may require such participant to refund, with interest, payments received under this CRP contract, or require the participant to accept such adjustments in the subsequent payment as are determined to be appropriate by CCC. Participants that sign the CRP-1 with zero percent interest in the annual rental payment shall not be held responsible for contract compliance.
14. CONTRACT MODIFICATIONS
   A. CCC may modify this contract to add, or substitute certain practices when:
      (1) The installed practice failed to adequately control erosion through no fault of the participants;
      (2) The installed measure has deteriorated because of conditions beyond the control of the participants; or
      (3) Another practice will achieve at least the same level of environmental benefits.
   B. Concurrence of NRCS and the conservation district may be obtained by CCC when modifications to this contract involve a technical aspect of a participant’s Conservation Plan.

15. EFFECTIVE DATE AND CHANGES TO CONTRACT
   A. The CRP contract is effective when, as determined by CCC, it has been signed by the participants and an authorized representative of CCC. Except as otherwise determined by CCC, as permitted by regulations or other law, the CRP contract may not be revoked or revised unless by mutual agreement between the parties. If, after the effective date of this contract, CCC determines that the offered acreage was erroneously enrolled or otherwise ineligible for enrollment, CCC may terminate the contract. Such termination shall not affect payments already made to the participants as of the time of termination. Within the dates established by CCC, the CRP contract must be signed by all required participants.
   B. In the event that a statute is enacted during the period of this CRP contract which would materially change the terms and conditions of this CRP contract, the CCC may require the participants to elect between acceptance of modifications in this CRP contract consistent with the provisions of such statute or termination of this CRP contract.

16. TRANSFER OF LAND
   A. If a new owner or operator purchases or obtains the right and interest in, or right to occupancy of, the land subject to this contract, such new owner or operator, upon the approval of CCC, may become a participant to a new CRP contract under the same terms and conditions with CCC covering such transferred land;
   B. With respect to the transferred land, if the new owner or operator becomes a successor to the existing CRP contract, the new owner or operator shall assume all obligations under such contract of the previous participant;
   C. If the new owner or operator becomes a successor to a CRP contract with CCC:
      (1) Cost-share payments shall be made to the participant who established the practice; and
      (2) Annual rental payments to be paid during the fiscal year when the land was transferred shall be divided in an equitable manner, as determined by CCC.
   D. A new owner or operator will not be eligible to succeed to the CRP contract or receive payments under the contract if a previous participant in the contract maintains or acquires any interest of any kind in the property including, but not limited to, present, future, or conditional interests, or reversionary interests, or any option with respect to the property. In addition, unless otherwise approved in writing by CCC for the particular contract, a new owner or operator will not be eligible to succeed to the CRP contract, if a lender has or will obtain an option to purchase the property, any other right of occupancy, or share in the property which is not conditional on a foreclosure or other remedy for nonpayment of debt or on a voluntary transfer by the person seeking to succeed to the CRP contract.
CRP-1 Appendix, Appendix to Form CRP-1, Conservation Reserve Program Contract
(Continued)

E. The participant certifies that no person has, or will, obtain an interest in the property that would render the new owner or operator to be ineligible to succeed to the CRP contract under the provisions of this paragraph. The existence or acquisition of such an interest by another person shall be considered a breach of the contract for which the CCC may terminate the contract and enforce the remedies provided in this Appendix.

F. If a participant transfers all or part of the right and interest in, or right to occupancy of, the CRP land and the new owner or operator does not become a successor to such contract within 60 days, or such other time as determined appropriate by CCC, of such transfer, such contract will be terminated with respect to the affected portion of such land and the original participant must:

(1) Forfeit all rights to any future payments with respect to such acreage;

(2) Refund all or part of the payments made with respect to such contract plus interest thereon, as determined by CCC, and

(3) Pay liquidated damages to CCC as specified in paragraph 10 of this Appendix.

17. REGULATIONS TO PREVAIL

The regulations in 7 CFR Part 1410 for the CRP are incorporated herein. In the event of a conflict between these regulations and the terms of this Appendix, the provisions of the regulations will prevail.

*--

The U.S. Department of Agriculture (USDA) prohibits discrimination against its customers, employees, and applicants for employment on the bases of race, color, national origin, age, disability, sex, gender identity, religion, reprisal, and where applicable, political beliefs, marital status, familial or parental status, sexual orientation, or all or part of an individual's income is derived from any public assistance program, or protected genetic information in employment or in any program or activity conducted or funded by the Department. (Not all prohibited bases will apply to all programs and/or employment activities.) Persons with disabilities, who wish to file a program complaint, write to the address below or if you require alternative means of communication for program information (e.g., Braille, large print, audiotape, etc.) please contact USDA's TARGET Center at (866) 632-9992 (voice and TDD). Individuals who are deaf, hard of hearing, or have speech disabilities and wish to file either an EEO or program complaint, please contact USDA through the Federal Relay Service at (800) 877-8339 or (800) 845-6136 (in Spanish).

If you wish to file a Civil Rights program complaint of discrimination, complete the USDA Program Discrimination Complaint Form, found online at http://www.ascr.usda.gov/complaint_filing_cust.html, or at any USDA office, or call (866) 632-9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter to USDA, Director, Office of Adjudication, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, by fax (202) 690-7442 or email at program.intake@usda.gov. USDA is an equal opportunity provider and employer.
Examples for Completing CRP-1 When Exceeding $50,000 Maximum Payment Limitation

A Conditions

The following provides references to examples and conditions for completing CRP-1, when the $50,000 per FY maximum payment limitation will be exceeded.

Note: This is not the original CRP-1 payment limitation.

<table>
<thead>
<tr>
<th>Example</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Total annual payments results in participant exceeding the $50,000 per FY maximum payment limitation. See contract number 100, subparagraph B.</td>
</tr>
<tr>
<td>B</td>
<td>Participant has an interest in 2 CRP-1’s. The total annual rental payments result in participant exceeding the $50,000 per FY maximum payment limitation. See contract number 300, subparagraph C.</td>
</tr>
<tr>
<td>C</td>
<td>One participant has an interest in 2 CRP-1’s. The other participant does not have an interest in any other CRP-1. The total annual rental payments for 1 participant exceeds the $50,000 per FY maximum payment limitation. One participant’s annual rental payment on CRP-1 is reduced and the other participant receives the full amount. See contract number 400, subparagraph D.</td>

</tbody>
</table>
Examples for Completing CRP-1 When Exceeding $50,000 Maximum Payment Limitation
(Continued)

B Example A

Contract number 100.

Allen Smith is owner and operator of Blackacre farm. Mr. Smith enrolls 1,500 acres in CRP at $50 per acre with a 100 percent share (1,500 x $50 = $75,000). Mr. Smith does not have any interest in any other CRP-1. Because there is only 1 participant on CRP-1, the annual contract payment, CRP-1, block 10B, is limited to $50,000.

The County Office:

- shall enter and circle $75,000 next to block 10B
- shall make a notation on CRP-1 explaining the circled figure
- may have to change the entry in block 10B if the contract is revised.

**NOTE:** The following statement is made in accordance with the Privacy Act of 1974 (5 U.S.C. 552a) and the Paperwork Reduction Act of 1995 (Pub. L. 104-191), as amended and the Farm Security and Rural Investment Act of 2002 (Pub. L. 107-171) and regulations promulgated at 7 CFR Part 1410 and the Internal Revenue Code (26 U.S.C. 8159). The information requested is necessary for CCC to consider and process the offer to enter into a Conservation Reserve Program Contract, to assist in determining eligibility, and to determine the correct parties to the contract. Furnishing the requested information is voluntary. Failure to furnish the requested information will result in determination of eligibility for certain program benefits and other financial assistance administered by USDA agency. This information may be provided to other agencies, IRS, Department of Justice, or other state and federal law enforcement agencies, and in response to a court judgment or administrative tribunal. The provisions of criminal and civil fraud statutes, including 18 USC 285, 287, 371, 641, 651, 1001, 15 USC 714d; and 31 USC 3719, may be applicable to the information provided. RETURN THIS COMPLETED FORM TO YOUR COUNTY FSA OFFICE.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where prohibited by law sex, marital status, familial status, parental status, religion, political beliefs, genetic information, and where applicable to the specific program, or activity. Persons with disabilities who requireAlternate means of communication should contact USDA’s Target Center at (202) 720-2600, (800) 877-8339 (TDD), or 800-877-8339 (TDD), or 800-845-6132 (Spanish). USDA is an equal opportunity provider and employer.
C  Example B

Contract number 300.

Jeff Brown is owner and operator of Greenacre farm. Mr. Brown enrolls 1,500 acres in CRP at $50 per acre with a 100 percent share (1,500 x $50 = $75,000). Mr. Brown has an interest in CRP-1 number 5 on a separate farm, Whiteacre, and receives $25,000 annual rental payment from that CRP-1. CRP-1 for Whiteacre farm is scheduled to expire on September 30, 2013. The annual contract payment, CRP-1, block 10B, for Greenacre is $25,000.

The County Office shall:

- enter and circle $75,000 next to block 10B
- make a notation on CRP-1 explaining the circled figure.

Mr. Brown may be able to increase the annual rental payment for Greenacre if the contract is revised or when CRP-1 for Whiteacre expires.

Examples for Completing CRP-1 When Exceeding $50,000 Maximum Payment Limitation
(Continued)

D  Example C

Contract number 400.

Mike Jones is owner of Redacre farm. Judy Jackson operates Redacre farm. Mr. Jones and Mrs. Jackson enroll 1,500 acres in CRP at $50 per acre each with a 50 percent share (1,500 x $50 x .5000 = $37,500). Mr. Jones has an interest in CRP-1 number 10 on a separate farm, Blueacre, and receives $40,000 annual rental payment from that CRP-1. CRP-1 for Blueacre farm is scheduled to expire on September 30, 2013. Mrs. Jackson does not have any interest in any other CRP-1. The annual contract payment, CRP-1, block 10B, for Redacre is $47,500.

The County Office shall:

- enter and circle $75,000 next to block 10B
- make a notation on CRP-1 explaining the circled figure.

Mrs. Jackson shall receive $37,500 annual rental payment if all eligibility requirements are met. Mr. Jones shall receive $10,000 annual rental payment for Redacre if all eligibility requirements are met.

The County Office shall enter $10,000 in CRP-1, block 12, in addition to the percent share block for Mr. Jones.

Mr. Jones may be able to increase the annual rental payment for Redacre if the contract is revised or when CRP-1 for Blueacre expires.
This is example C for completing CRP-1.

Completing CCC-770-CRP’s, CRP Checklists

A Instructions

County Offices shall:

- complete the applicable CCC-770-CRP1, CCC-770-CRP2, CCC-770-CRP3, and/or CRP-770-CRP4 for the applicable section

- prepare CCC-770-CRP1, CCC-770-CRP2, CCC-770-CRP3, and/or CRP-770-CRP4 and file original in participant's CRP folder

- sign and date applicable signature line.
Completing CCC-770-CRP’s, CRP Checklists (Continued)

**B CCC-770 CRP1**

Following is a CCC-770 CRP1 that is available at [http://fsaintranet.sc.egov.usda.gov/dam/ffasforms/forms.html](http://fsaintranet.sc.egov.usda.gov/dam/ffasforms/forms.html).

7-28-10  2-CRP (Rev. 5) Amend. 1
Completing Manual FSA-18, Applicant’s Agreement to Complete an Uncompleted Practice

A Instructions

County Office shall:

- complete FSA-18, using data from AD-245
- reproduce FSA-18 locally

**Note:** Include form number, OMB number, and date on the reproduction.

- prepare FSA-18 in duplicate:
  - mail copy to participant
  - file original in participant’s CRP folder.

Participant shall sign FSA-18 agreeing to complete the practice. COC shall review and, if eligible, approve all FSA-18’s.
### B Example of FSA-18

Following is an example of FSA-18.

The following is an example of CRP-20 to be issued with CRP-1E Addendum.

---

**Reproduce locally. Include form number and date on reproductions.**

**U.S. Department of Agriculture**

**Commodity Credit Corporation**

**NOTICE OF CONSERVATION RESERVE PROGRAM (CRP)**

**CONTRACT TERMINATION**

**NAME AND ADDRESS CRP PARTICIPANT**

**COUNTY**

**STATE**

**CONTRACT NO.**

We understand that the property under the above identified CRP contract is now in the possession of __________________________ of the Department of __________________________ which has taken ownership of the property by foreclosure or otherwise. Because __________________________ (agency) is a federal agency, it cannot succeed to the contract. In such circumstances, the CRP contract and CRP regulations provide for terminating the contract and for collecting, from the contract participant, liquidated damages and a refund, with interest, of monies paid under the CRP contract.

____________________________(agency) has indicated its willingness to comply with the conservation provisions of the contract. Accordingly, if you agree, (by signing the attached CRP-1E Addendum Regarding Possession of Conservation Reserve Program (CRP) Property Held by Federal Agency) a claim will not be established at this time.

A claim will be established if the __________________________ (agency) or its successor fails to comply with the conservation provisions of the contract. Whether or not you sign the CRP-1E Addendum no further payments will be made to you under the contract unless the property is leased or sold back to you in such a manner as will for the remainder of the contract period place you in control of the property, and the Commodity Credit Corporation (CCC) agrees to make further payments in which case, payment may be made on such terms as CCC agrees to. If you do not sign the CRP-1E Addendum it will not increase your liability (in the event that __________________________(agency) or its successor fails to maintain the property in accordance with the conservation provisions of the contract) although, should a claim be later established, interest calculations could be affected.

Sincerely yours,

County Executive Director

---

\*This program or activity will be conducted on a nondiscriminatory basis without regard to race, color, religion, national origin, age, sex, marital status, or handicap.*

**ADDITION REGARDING POSSESSION OF CONSERVATION RESERVE PROGRAM (CRP) PROPERTY HELD BY FEDERAL AGENCY**

The following statement is made in accordance with the Privacy Act of 1974 (5 U.S.C. 552a) and the Paperwork Reduction Act of 1995, as amended. The authority for requesting the following information is to be supplied on this form in the Food and Security Act of 1985, Pub. L. 99-198, and the regulations promulgated hereunder (7 C.F.R. Part 704 and the Internal Revenue Code (26 U.S.C. 8106). This information requested is necessary for CCC to consider and process the offer to enter into a Conservation Reserve Program to assist in determining eligibility, and to determine the correct parties to the contract. This information may be provided to other agencies, IRS, Department of Justice, or other State and Federal Law enforcement agencies, and in response to a court magistrate or administrative tribunal. The provisions of criminal and civil fraud statutes, including 18 USC 1341, 1343, 15 USC 774, 781, 801, 1001; 18 USC 774, 781, 801, 1001; 31 USC 3729, may be applicable to the information provided. Federal Agencies may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Public reporting burden for this collection of information is estimated to average 3 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Department of Agriculture, Clearance Officer, CRM (OMB No. 0570-0125), STOP 7530, Washington, D.C. 20250-7530. RETURN THIS COMPLETED FORM TO YOUR COUNTY AGENCY OFFICE.

The parties to this Addendum are the undersigned participants in the CRP contract No. ______ and the Commodity Credit Corporation ("CCC").

The parties state and agree:

1. The property which is the subject of the above-identified CRP contract (hereinafter "the contract") is now held by __________________________ (agency) (hereinafter "the acquiring agency") of the Department of __________________________ which has acquired the property by foreclosure or otherwise and which is in control of the property.

2. As the acquiring agency is not and cannot be a party to the contract by succession or otherwise, the contract is terminable by the CCC. However, it is agreed by the parties to this Addendum that:
   (a) Except as specified in paragraph (c), no further payment shall be made to the undersigned CRP participants (hereinafter "the participants") under the contract by the CCC. However, no claim for a refund of payments previously made or for liquidated damages as would accrue to CCC under the contract in cases of contract terminations will be established by the CCC against the participants so long as the land which is the subject of the contract is maintained, through the termination date of the original contract, in full compliance with the conservation requirements of the contract including, but not limited to, requirements relating to the maintenance of the permanent cover crop and the prohibition against the production of crops on the property. In the event that for any reason the property is not maintained in accordance with these requirements, CCC may terminate the contract, may establish a claim against the participants, may collect all sums provided in the contract, and may pursue any and all other remedies provided for in favor of CCC under the contract.
   (b) The acquiring agency may sell or otherwise transfer ownership and control of the property to a party who is eligible to succeed to the contract and such buyer may, at such buyer’s option, succeed to the contract. In the event of such a succession, the participants will be relieved of liability for any failure to comply with the conservation practices of the contract, absent collusion on the part of the participants.
   (c) To the extent that the current operator of the property or producer on the property is one of the participants and continues to be the operator on the property or producer on the property even though ownership of the property is now held by the acquiring agency, such person may continue to receive payments provided for in the contract so long as the property is maintained in accordance with the terms of the contract, such person continues to be the operator of the property, ownership of the property remains with the acquiring agency, and the acquiring agency, subject to CCC approval, notifies CCC that it wishes to exercise that option.
   (d) The participants hereby waive any defenses which they may have, now or later, under any statute of limitations to any claim made by CCC under the contract.

It is so agreed and understood.

This program or activity will be conducted on a nondiscriminatory basis without regard to race, color, religion, national origin, age, sex, marital status, or disability.
CRP participants requesting haying or grazing on CRP acreage must designate the request on CRP-117.

Note: Only 1 CRP participant need sign this document.
I/We hereby request authority for haying (including for Biomass) and routine grazing of approved cover on CRP acreage.

I/We agree to: (1) obtain a modified conservation plan to include haying, as determined by the Natural Resources Conservation Service (NRCS) or Technical Service Provider (TSP); (2) re-establishing, at my/our own expense, any cover destroyed or damaged as a result of participating under this authority, regardless of recommendations or determinations made by NRCS or the TSP; (3) remove all hay from CRP acreage within 10 calendar days from the date notified by Farm Service Agency (FSA) at the local county office that managed haying or routine grazing authorization has ended; and (4) not manage hay and routine graze the same acreage.

Check the payment reduction option applicable to this contract:

_____ The payment reduction has been paid in advance.

_____ The FY _____ annual rental payment, scheduled to be made after October 1, will be reduced by the number of acres actually hayed, times 25 percent of the CRP annual per acre payment rate.

The CRP contract is subject to termination or other penalties as may be authorized by the CRP contract and regulations should there be any violation of this haying authority of CRP acreage.

If the payment reduction has not been paid in advance, all signatories on CRP-1 shall sign these conditions before haying begins.

CRP-1 Contract Number: _____ Farm Number: _____

Tract Number: _______________ Field Number: _____ Acres Hayed/Grazed: _______

Participant’s Signature/Dates:

NOTE: The following statement is made in accordance with the Privacy Act of 1974 (5 USC 552a, as amended). This authority for requesting the information described on this form is 7 CFR Part 1419, the Food Security Act of 1988 (16 USC 3801 et seq.), the Community Credit Coordination Act (41 USC 4101 et seq.), the Food, Conservation, and Energy Act of 2008 (Pub. L. 110-234). The information will be used to determine eligibility to certify participation in haying and grazing of CRP acreage. The information collected on this form may be disclosed to other Federal, State, Local government agencies, Tribal agencies, and nongovernmental entities that have been authorized access to the information by statute or regulation and/or as described in applicable Freedom of Information Act (5 USC 552, as amended). Providing the requested information is voluntary. However, failure to furnish the requested information will result in a determination of eligibility to certify participation in haying and grazing of CRP acreage.

The Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, political beliefs, genetic information, or where authorized by law. Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA’s TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Assistant Secretary for Civil Rights, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue, S.W., Stop 0106, Washington, D.C. 20250-9410, or call toll-free at (866) 632-9992 (English) or (800) 877-8339 (TDD) or (866) 877-8339 (English), or (800) 877-8339 (TDD), or (866) 877-8339 (Spanish), or write in Spanish at (866) 877-8231. USDA is an equal opportunity provider and employer.
Completing CRP-42, County Precipitation and Feed and Forage Loss Report

A Completing CRP-42 for Emergency Haying or Grazing of CRP Acreage

County Offices requesting emergency haying or grazing of CRP acreage shall complete CRP-42 when submitting their request.

County Offices shall send the completed CRP-42 plus all other supporting documentation to STC for review. STC, or its designee, shall review CRP-42 for completeness and accuracy, and use the data provided plus all other supporting information provided to determine county eligibility for emergency haying and grazing. If the county is requesting a Secretarial authorization of emergency haying and grazing of CRP acreage, forward the approved and signed CRP-42 with the request to CEPD for determination.

Use the following instructions to complete CRP-42 for emergency haying and grazing of CRP acreage.

<table>
<thead>
<tr>

Terms and Conditions for Emergency Haying and Grazing of CRP Acreage

I/We hereby request authority for emergency haying or grazing of approved cover on CRP acreage.

I/We agree to: (1) obtain a modified conservation plan to include haying, as determined by the Natural Resources Conservation Service (NRCS) or Technical Service Provider (TSP); (2) re-establishing, at my/our own expense, any cover destroyed or damaged as a result of participating under this authority, regardless of recommendations or determinations made the TSP; (3) remove all hay or livestock from CRP acreage before the earlier of October 1, or 10 calendar days from the date notified by Farm Service Agency (FSA) at the local county office that emergency haying or grazing authorization has ended; (4) limit haying of CRP acreage to one cutting; (5) not hay and graze the same acreage; (6) not rent or lease the haying or grazing privilege for an amount greater than the applicable payment reduction; and (7) not sell the hay harvested according to this agreement.

Check the payment reduction option applicable to this contract:

- The payment reduction has been paid in advance.
- The FY _____ annual rental payment, scheduled to be made after October 1, will be reduced by the number of acres actually hayed or grazed, times 25 percent of the CRP annual per acre payment rate.

I/We agree to leave at least 50 percent of each field or contiguous fields unhayed, or leave at least 25 percent of each field or contiguous fields ungrazed for wildlife, or graze all of the CRP acreage at no more than 75 percent of the stocking rate determined by the TSP. If acreage hayed or grazed is more or less than originally intended, I/We will notify FSA at the local county office so the CRP annual rental payment can be adjusted accordingly.

The CRP contract is subject to termination or other penalties as may be authorized by the CRP contract and regulations should there be any violation of this haying or grazing authority of CRP acreage.

If the payment reduction has not been paid in advance, all signatories on CRP-1 shall sign these conditions before haying or grazing begins.

NOTE: The following statement is made in accordance with the Privacy Act of 1974 (5 U.S.C. 552a - as amended), The authority for requesting the information identified on this form is 7 CFR Part 1415, the Food Security Act of 1985 (16 U.S.C. 3831 et seq.), the Commodity Credit Corporation Charter Act (15 U.S.C. 714 et seq.), and the Food, Conservation, and Energy Act of 2008 (Pub. L. 110-246). The information will be used to determine eligibility to request to participate in incidental grazing of CRP acreage. The information collected on this form may be disclosed to other Federal, State, local government agencies, Tribal agencies, and nongovernmental entities that have been authorized access to the information by statute or regulation and/or as described in applicable Routine Uses identified in the System of Records Notice for USDA/FSA-5, Farm Records File (Automated). Providing the requested information is voluntary. However, failure to furnish the requested information will result in a determination of ineligibility to request to participate in incidental grazing of CRP acreage.

The information collection is exempted from the Paperwork Reduction Act as it is required for the administration of the Food, Conservation, and Energy Act of 2009 (see Pub. L. 110-246). Title II, Subtitle J/Good Neighbor Conservation Provisions: The provisions of criminal and civil fraud, privacy and other statutes may be applicable to the information provided.

RETURN THIS COMPLETED FORM TO YOUR COUNTY FSA OFFICE.
*--General Information for TIP Payments

A Introduction

The TIP payment process is an automated process that determines the following:

- whether the producer is eligible to receive payment
- payment amounts that can be sent to NPS for disbursement
- overpayment amounts that will be updated to the Pending Overpayment Report if the producer is determined ineligible after a payment has been disbursed.

B Payment Processing and Eligibility

The TIP payment process uses the common payment process developed for other programs such as SURE, ELAP, and Reimbursement Transportation Cost Program. See 9-CM for additional information on the common payment process including the eligibility rules applicable for TIP.

C Frequency of Payment Processing

TIP payments are processed nightly for the following:

- payment amounts recorded through the TIP payment process during the workday
- any payment on the Nonpayment or Insufficient Funds reports will be reprocessed nightly to determine whether the condition previously preventing the payment has been corrected. See 9-CM for additional information on the Common Payment Reports.

D Payments Less Than $1

TIP payment process will:

- issue payments that round to at least $1
- **not** issue payments less than 50 cents.

E eFunds Allotment

TIP payments are controlled through the e-funds process. Allotments will be provided to each County Office by the National Office based on total net TIP payment amounts for the applicable program year by administrative State and County Office as computed through the TIP payment process.

If additional funds are required, County Offices shall contact the appropriate State Office specialist. State Offices shall contact the National Office to request additional allotments by sending an e-mail with the program year and amount to lana.Nesbit@wdc.usda.gov.--*
F Payment Limitation

The payment limitation for TIP is $50,000. The following programs are subject to the same $50,000 for the program year:

- CRP
- EFCRP
- SAFE
- TIP.

The accumulated total of all payments for these programs cannot exceed $50,000 for the applicable program year. Determining the amounts subject to payment limitation also varies based on whether the contract is subject to 1-PL or 4-PL rules. All TIP payments are subject to 1-PL provisions.

See 1-PL and 4-PL for additional information on controlling payment limitation.

G Payment Due Date

61-FI provides general guidance for determining payment due dates for various programs. The TIP payment system sends the current system date to NPS as the payment due date. The system cannot determine the payment due date because of numerous factors. County Offices shall manually determine the payment due date by determining the later of the following:

- date producer signed CRP-1R
- date producer filed payment eligibility documentation, including the following:
  - AD-1026
  - CCC-502
  - CCC-526, if AGI provisions were applicable to the expiring CRP contract
- if the producer is an entity or joint operation, date members filed the requisite payment eligibility documentation
- availability of software to process the payment, usually the first week of October of the applicable payment year.

If the payment is not issued within 30 calendar days after the later of the dates in this subparagraph, then prompt payment interest is payable to the producer. County Offices shall:

- manually determine the payment due date based on the factors identified in this subparagraph
- follow the provisions of 61-FI for issuing the interest payment. --*
H AGI

AGI provisions are not applicable to TIP unless the CRP contract was extended through the REX process. If extended through REX, the $2.5 million AGI provisions are applicable.

*--Since TIP does not have an automated contract process to determine AGI based on the--*
eligibility applicable to the expiring CRP contract, there is no way for the payment system to check AGI eligibility. Therefore County Offices shall follow this table if a producer or member does not meet AGI provisions.

<table>
<thead>
<tr>
<th>IF the producer on CRP-1R…</th>
<th>THEN County Offices shall…</th>
</tr>
</thead>
</table>
| does not meet AGI provisions | • notate the ineligibility on CRP-1R  
                                  • not record the payment in the TIP payment software. |
| is an entity or joint operation and at least one member does not meet applicable AGI provisions | notify their State Office. |
|                           | State Offices shall contact CEPD for assistance. |
**--TIP Payment Software**

**A Introduction**

Because an automated application process has not been developed for TIP, the amounts calculated through the TIP Workbook must be recorded in the web-based TIP payment process.

**B Accessing the TIP Home Page**

To access the TIP Home Page, go to FSA’s Applications Intranet web site at [http://fsaintranet.sc.egov.usda.gov/fsa/FSAINtranet_applications.html](http://fsaintranet.sc.egov.usda.gov/fsa/FSAINtranet_applications.html). Under Conservation, CLICK “TIP Payment Process”.

Users will be prompted to login through the USDA eAuthentication Login Screen. Login in the normal manner and the TIP Home Page will be displayed.

The following is an example of the TIP Home Page.

![TIP Home Page Example](image-url)
TIP Payment Software (Continued)

**C Recording Payment Amounts**

*--Payments can be recorded for 2012, 2013, and 2014; however, they will **not** process until the payment due date.

- Additions or changes made to 2012 payments will be processed immediately.
- 2013 installment payments will process after October 1, 2013.
- 2014 installment payments will process after October 1, 2014.

Record TIP payment amounts according to this table.

**Reminder:** Do **not** record payment amounts for producers who do **not** meet AGI provisions. See Exhibit 60, subparagraph H for additional information.

<table>
<thead>
<tr>

C Recording Payment Amounts

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>7</td>
<td>On the Record Calculated Payment Confirmation Page, CLICK “Confirm” to record the payment amount.</td>
<td>The Main Menu will be redisplayed with a message confirming the payment has been added.</td>
</tr>
<tr>
<td>8</td>
<td>After the payment is added, an internal tracking number will be displayed with the contract number.</td>
<td></td>
</tr>
</tbody>
</table>

**Example:** In this example, the “24” is the internal control number for contract 451D.

**Recommendation:** County Offices should record the internal control number on CRP-1R and/or the TIP Payment Report printed from the TIP Workbook process.

D Modifying/Deleting TIP Payment Amounts

Modify and delete TIP payment amounts according to the following.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
<th>Result</th>
</tr>
</thead>
</table>
| 1    | On the TIP Home Page:  
  - select the administrative State and county associated with the producer’s CRP-1R  
  - CLICK “Continue”. | The Main Menu will be displayed. |
| 2    | On the Main Menu, CLICK “Modify/Delete Calculated Payment”. | The SCIMS Search Page will be displayed. |
| 3    | The SCIMS Search Page will provide various options for selecting a producer. Enter the producer information using the desired option and select the applicable producer to continue. | The Select Contract Number Page will be displayed with the selected producer name. |
**D Modifying/Deleting TIP Payment Amounts (Continued)**

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
<th>Result</th>
</tr>
</thead>
</table>
| 4    | On the Select Contract Number Page:  
  - select the contract for the selected producer that needs to be modified or deleted from the drop-down list  
  *Note:* The internal contract number assigned when the payment was originally recorded is displayed with the contract number in the drop-down list. For example “451D (24)”.  
  - CLICK “Continue”. | The Modify/Delete Calculated Payment Page will be displayed. |
| 5    | On the Modify/Delete Calculated Payment Page the recorded payment amount will be displayed.  
  **IF the user wants to…** | **THEN…** |
|      | modify the payment amount previously recorded |  
  - revise the payment amount displayed  
  *--Note:* The calculated contract payment amount for the producer should be entered regardless of amounts previously recorded and/or paid to the producer for the contract.  
  - CLICK “Modify”. | The Modify Calculated Payment Confirmation Page will be displayed. |
|      | delete the payment | CLICK “Delete”. | The Delete Calculated Payment Confirmation Page will be displayed. |
| 6    | On the Modify/Delete Calculated Payment Confirmation Page, CLICK “Confirm” to modify or delete the payment amount. | The Main Menu will be redisplayed with a message confirming the payment has been modified or deleted. |
E Enter New Contract Number Page

The Enter New Contract Number Page allows the user to specify the contract number associated with CRP-1R. The contract number entered:

- can contain numbers and letters
- should not include any spaces or special characters, such as hyphens
- should not include the word “TIP”.

The following is an example of the Enter New Contract Number Page.

![Enter New Contract Number Page]

The following options are available on the Enter New Contract Number Page.

<table>
<thead>
<tr>
<th>Option</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change State/County</td>
<td>Option on the left navigation menu allows the user to go back to the TIP Home Page.</td>
</tr>
<tr>
<td>Main Menu</td>
<td>Option on the left navigation menu allows the user to go back to the TIP Main Menu.</td>
</tr>
<tr>
<td>Continue</td>
<td>Continues to the Record Calculated Payment Page.</td>
</tr>
</tbody>
</table>
E Enter New Contract Number Page (Continued)

The following error messages may be displayed on the Enter New Contract Number Page if the data recorded does not meet the applicable validations. Users must correct these conditions before proceeding to the next applicable page.

<table>
<thead>
<tr>
<th>Error Message</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contract Number is required</td>
<td>Ensure the contract number from the CRP-1R has been entered.</td>
</tr>
<tr>
<td>Contract Number can contain letters and number only. No spaces or special characters allowed.</td>
<td>Correct the contract number by removing the spaces and/or special characters, such as hyphens.</td>
</tr>
</tbody>
</table>

Example: 451D

F Record Calculated Payment Page

The Record Calculated Payment Page allows the user to record the calculated payment amount from the TIP Workbook associated with the selected producer and TIP contract. The payment amount entered must be:

- in whole dollars
- greater than $0.

The following is an example of the Record Calculated Payment Page.
F Record Calculated Payment Page (Continued)

The following options are available on the Record Calculated Payment Page.

<table>
<thead>
<tr>
<th>Option</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change State/County</td>
<td>Option on the left navigation menu allows the user to go back to the TIP Home Page.</td>
</tr>
<tr>
<td>Main Menu</td>
<td>Option on the left navigation menu allows the user to go back to the TIP Main Menu.</td>
</tr>
<tr>
<td>Submit</td>
<td>Displays the confirmation page to record the payment. Once confirmed, returns to the TIP Main Menu.</td>
</tr>
<tr>
<td>Cancel</td>
<td>Discontinues the process and returns to the TIP Main Menu without saving the payment amount.</td>
</tr>
</tbody>
</table>

The following error messages may be displayed on the Record Calculated Payment Page if the data recorded does not meet the applicable validations. Users must correct these conditions before proceeding to the next applicable page.

<table>
<thead>
<tr>
<th>Error Message</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The amount recorded in each field must be in whole dollars.</td>
<td>Correct the payment amount recorded by entering whole dollars without cents. The TIP Workbook is designed to round to whole dollars using traditional rounding rules.</td>
</tr>
<tr>
<td>Payment amount is empty or not numeric for account TIP.</td>
<td>The payment amount was either not entered or included something other than numeric values, such as a $, comma, or character. Enter the numeric payment amount only.</td>
</tr>
<tr>
<td>Payment amount must be greater than 0.</td>
<td>Payment amounts being recorded for the first time must be greater than zero. Change the payment amount to continue.</td>
</tr>
</tbody>
</table>

G Modify/Delete Calculated Payment Page

The Modify/Delete Calculated Payment Page allows users to modify or delete the calculated payment amount that was previously recorded. When modifying payment amounts, the payment amount entered:

- shall be the calculated contract payment for the applicable producer, contract, and year from the TIP Workbook

  **Example:** $1,000 was originally recorded for the producer and contract and the payment was disbursed to the producer. It is then determined the TIP contract acres used to calculate the payment were incorrect. After correcting the acres in the TIP Workbook, the revised contract payment amount is $900.

  $900 is the modified payment amount.

- must be recorded in whole dollars

- must be greater than $0.
G Modify/Delete Calculated Payment Page (Continued)

The following is an example of the Modify/Delete Calculated Payment Page.

![Modify/Delete Calculated Payment Page](image)

The following options are available on the Modify/Delete Calculated Payment Page.

</tr>
</tbody>
</table>
*--Handling Contract Modifications for Payment Processing

A Introduction

An automated contract process has not been developed for TIP contracts. As such, contract information was originally maintained on an Excel spreadsheet and uploaded to the National Office.

In August 2012, a new process was implemented to capture and maintain the contract information.

- An Excel workbook was distributed that required County Offices to record detailed contract information.
- Workbooks were uploaded to a new SharePoint site and imported into a database. A report was then posted to the SharePoint site that includes contract information for all States and counties from the upload.
- A section was added to the SharePoint site that allows State and/or County Office users to add new contracts or modify existing contract information that was uploaded.

B TIP SharePoint Site

The TIP SharePoint site was established so all contract information could be submitted to the National Office instead of an automated contract process. Initially, the site was used to upload the TIP Workbooks that were updated by State and County Offices in August 2012.

The site is now used to:

- dispense information related to TIP
- provide a method for reporting contract changes.

C SharePoint Authorized Users

When the SharePoint site was initially deployed, a list of users was obtained from each State Office. This list included all State and County Office users with responsibility for administering TIP.

An e-mail message should be sent to Tracey Smith at tracey.smith@wdc.usda.gov to do either of the following:

- request that new users be added
- delete users that no longer are responsible for administering TIP.--*
**D TIP County Report**

The TIP County Report is a comprehensive list of all TIP contracts enrolled. It is critical that this report be maintained throughout the life of TIP because the information is used to:

- oversee program activities since software is **not** available for TIP contracts
- obligate funds that must be in place to pay participating, eligible producers.

The TIP County Report can be accessed from the TIP SharePoint site by clicking the report under the “Shared Documents” section.

**E Reporting Contract Changes**

The TIP SharePoint site includes a “TIP Contract Modifications” section. State and County Offices shall ensure that all changes to TIP contract information are reported to the National Office for reasons including, but not limited to, the following:

- information uploaded through the TIP workbook process was incorrect or incomplete
- CRP-1R has been modified because of succession or revision
- CRP-1R has been terminated.

---

---
E Reporting Contract Changes (Continued)

This table describes how to report a change to contract information.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>On the TIP SharePoint site, CLICK “Add new item” under the “TIP Contract Modifications” section.</td>
</tr>
</tbody>
</table>
| 2    | Complete each field, except those specifically designated as “WDC Use Only”.  
      | Note: The system will compute the contract payment amounts for each installment. If the amount should be prorated, then include the prorated information in the “Comments” section. |
| 3    | CLICK “OK” to redisplay the main page of the SharePoint site with summary information for the applicable contract or producer. |

F National Office Action

When TIP contract modification items are added to the SharePoint site, the National Office program managers receive an e-mail notification. The following is the action that is taken for each case.

- Case is reviewed to ensure that applicable program provisions have been met.
- If there are questions about the change, the State and/or County Office that submitted the information will be contacted for additional information.
- Once the modification is determined acceptable:
  - TIP contract database is updated
  - revised TIP County Report is posted that reflects the updated contract information
  - State and/or County Office is notified by e-mail that the action is completed.

Reminder: The information on the TIP County Report is used to obligate funds for payment processing, so it is critical that all information is accurately updated on this report. —*
SAFE Proposal Example

A SAFE Proposal Format

SAFE proposals shall be prepared according to the following criteria:

- use bulleted lists, tables, or short narratives
- submit an electronic copy in Microsoft Word
- no more than 5 to 10 pages in length
- format and separate required information into sections, according to the following.

Include the following information in each section.

1.0 Project Overview

1.1 Project Name

1.2 Contact Organization, Name, Address, Telephone Number, FAX Number, E-mail Address

1.3 Stakeholders

1.4 State or States

1.5 County or Counties

1.6 Hydrologic Unit Code (HUC) (11- to 14-digit code)

2.0 Project Goals

2.1 Describe the desired goal of the project.

2.2 Provide measurable program outcomes and timeframes for when the outcomes would be achieved.

2.3 List no more than 5 species with supporting documentation such as technical, peer reviewed publications, reports, or studies by State DNR, State wildlife agencies, USFWS, etc.—*
A SAFE Proposal Format (Continued)

3.0 Project Description

3.1 Defined project boundaries (State, county, HUC code (11- to 14-digit code)).

3.2 GIS file of the project boundaries in Environmental Systems Research Institute (ESRI) shapefile format:

3.2.1 Shapefile for project area
3.2.2 Shapefile for each target species within the project area.

3.3 CRP acreage request for SAFE.

3.4 List of SAFE practices and applied CRP practices in the following format; CP38A-8A, CP38C-3, CP38D-3A, CP38E-1, etc.

3.5 With each applicable CRP practice, list the proposed additional requirements.

3.6 Technical practice requirements (number of species, species selection, planting requirements, etc.) for each SAFE practice.

3.7 Habitat type to be restored.

3.8 Map of land use and existing habitat types in project area (proposed CRP land in relationship to existing habitats) as an attachment in ESRI shape file format:

3.8.1 Map of project area
3.8.2 Map for each target species within the project area
3.8.3 Map of project area with existing CREP agreement overlay.

3.9 Brief description of existing conditions (human and environmental within the project area).

3.10 Description of other Federal, State, and private efforts to achieve project goals and objectives.

4.0 Project Benefits

4.1 Describe benefits (including societal, recreational, economic, and environmental) of the proposed project

4.2 Describe relationship to existing Federal and State Wildlife plans or strategies, such as the State Wildlife Comprehensive Strategies.--*
SAFE Proposal Format (Continued)

5.0 Project Cost

5.1 Estimate FSA CRP payments.
5.2 Provide any additional State and private resources that will assist in the project.
5.3 Provide estimated CCC life of project costs.
5.4 Provide estimated State and private partners out-of-pocket costs.

6.0 Project Monitoring and/or Evaluation Plan

A habitat and wildlife population monitoring and evaluation plan is required and shall use generally accepted techniques appropriate to the geographic area and habitat type.

7.0 Project Public Outreach Program

7.1 Provide a discussion of the public support and outreach efforts to support the program.
7.2 Describe any communication plan for the proposed project.
7.3 Develop and provide a fact sheet about the SAFE practice for use with producers.--*
B Consideration for SAFE Monitoring and Evaluation

General

Number of Contracts and Acres by SAFE Project

Featured Species (Primary and Secondary) by SAFE Project

Other Species Benefitting by SAFE Project

Paired Plots of General versus Continuous CRP (SAFE) within SAFE Project Area

Run Sampling Twice During the Year (June and October)

Conduct a Representative, Random Sample of CRP Fields, Select SAFE Field First (then Closest General CRP Field for Paired Sample)

SAFE Project Being Monitored Should Have a Minimum of 50 Contracts

Sample 10 Percent of the SAFE Contracts (One Field per Contract) not to Exceed 50 Fields per SAFE Project

Maximum Total of 50 SAFE Fields and 50 General CRP Fields Surveyed per SAFE Project Area

Sampling Scheme Consists of Point Transect Lines (Minimum of 2 per CRP Field- One along Field Border; the other more or less centered along the Longest Axis of the Field)

Record Vegetative and Wildlife Observations by Field and/or Transect

Vegetative Cover

Composition

New, Native Grass, Forbs, Legumes, and Shrubs
Existing Native Grass, Forbs, Legumes, and Shrubs

New Introduced Grass, Forbs, Legumes, and Shrubs
Existing Introduced Grass, Forbs, Legumes, and Shrubs

New Trees
Existing Trees--*
B Consideration for SAFE Monitoring and Evaluation (Continued)

Is the prescribed vegetative cover adequately established across the field? Y/N

Does the current vegetative cover consist of a diverse mix of preferred species? Y/N

Or does the vegetative cover consist of a monoculture of one or just a few dominant species? Y/N

Is the prescribed vegetative cover being adequately maintained and/or managed? Y/N

Which maintenance and/or management activities are being applied:

Mowing/Haying
Grazing
Herbicide
Disking
Prescribed Burning
Brush Removal
Tree Thinning
Other (Describe) ________________________________.

Identify the Dominant Species Present:

Grass/Forbs/Legumes
Shrubs
Trees.

Are Invasive/Noxious Species Present? Y/N

Ocular estimate of Vegetative Cover Distribution by Percent

Grass __________ %
Forbs/Legumes ______ %
Shrubs __________ %
Trees ____________ %
Invasives __________ %
Bare ground __________ %--*
**B Consideration for SAFE Monitoring and Evaluation (Continued)**

**Structure**

Average Height of Dominant:

Grass ______
Shrubs ______
Trees ______.

Does vegetation present provide adequate cover to meet the life history needs of the featured species throughout the year? Y/N

**Wildlife Observations**

By Transect or Field

Species Identified

Visual Count by Featured and/or Other Species

Audible Count by Featured and/or Other Species

Other Count by Featured and/or Other Species--*
Variance From CRP Guidelines

Note: COC’s and NRCS shall not approve variances from CRP guidelines unless they believe the alternative approach has a reasonable chance of success.

NRCS has provided guidelines and specifications for the successful establishment of my contracted CRP cover. I intend to vary from these guidelines and specifications in the following checked categories and listed explanation. I fully understand that my responsibility is to achieve the contracted cover types and amounts of species, acres, stand density and composition as listed in the CRP-1, CRP-2, contract support document and related CRP contract forms. I understand that any necessary corrective actions to achieve the contracted stand will be at my own expense.

☐ Species in the mix (describe below)

☐ Seeding rates for one or more species (describe below)

☐ Seeding method (describe below)

☐ Seed Quality (describe below)

☐ Seeding date or timing (describe below)

☐ Seedbed preparation (describe below)

☐ Weed control (describe below)

☐ Other (describe below)

Describe variation from CRP Guidelines:

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

Producer Signature and Date | FSA COC Signature and Date | NRCS Signature and Date

5-18-11 | 2-CRP (Rev. 5) WA Amend. 1 |
NRCS Guidelines for Certifying CRP Fields

*--During a general CRP signup producers must decide what type of cover they are willing to provide under the contract. This decision is sometimes influenced by the adequacy of the existing stand. Producers are not always sure how the NRCS evaluation will rate the existing cover. NRCS has provided the following guidance to their employees to certifying the adequacy of existing CRP stands. County Offices may provide producers this information during a general signup to assist them in determining how their current stand will be rated.

**Guidelines for Certifying Existing Herbaceous Cover:**

1. Stand certification is evaluated on a field basis.

2. Existing stands must be dominated by desirable species. Desirable species are defined as those species which match the CRP offer. For example, a 50-point CP2 offer requires 5 native species to include three or more native grasses and at least one tree, shrub, forb or legume.

3. Plants of the desirable species must be healthy & vigorous.

4. Noxious plants (categories A, B & C according to county list) must be mostly absent and undergoing active control measures.

5. Other weedy invasive species will be at low enough levels as to not cause or be causing negative impact to desirable plant species. Weed pressure should be light and declining during normal precipitation years. Implement active control measures when weeds begin causing a negative impact. Weeds of concern include, but are not limited to: cheatgrass & other annual grasses, Russian thistle, Jim Hill mustard and China lettuce. Patches of Canada thistle need to be actively controlled.

6. Existing vegetation (ALL desirable species collectively) shall meet stand density requirements shown below in Table 1.

7. Stands dominated by rhizomatous species such as smooth brome and intermediate/pubescent wheatgrass must have at least 10 stems / sq. ft.

8. Guidelines for determining when to reseed seeding failures:
   a. Area within a field is 5 acres or larger in size
      i. 5 acres = 41 ft. x 1 mile
      ii. 5 acres = 467 ft. x 467 ft.
      iii. 5 acres = 165 ft. x 1320 ft.
   b. Area makes up one-third or more of fields smaller than 15 acres--*
NRCS Guidelines for Certifying CRP Fields (Continued)

**Table 1 – Stand Density of Existing Herbaceous Plant Species** (ALL desirable species collectively)

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>The objective of every new seeding and existing stands, for ALL desirable species, in the 12” or greater precipitation zone is 1.0 plant / sq. ft.</td>
</tr>
<tr>
<td>b.</td>
<td>For precipitation less than 12”, and for harsh, rocky or south-facing slopes, the density of ALL desirable plants shall be no less than 0.8 plant / sq. ft.</td>
</tr>
<tr>
<td>c.</td>
<td>CRP stand evaluations begin with reconnaissance of the field. Stand density (plants / sq. ft.) is derived by belt transects. Ocular estimates may be used in lieu of transects once the evaluators eye has become calibrated AND with prior Area Office approval. Belt transects should represent “typical areas” and be based on field reconnaissance. To improve accuracy, each belt transect should be at least 100 feet long. For irregular stands, a 300-foot transect provides more accurate data.</td>
</tr>
<tr>
<td>d.</td>
<td>For documentation, especially for marginal fields, it is suggested that each field have three belt transects on different landforms or soil types, as applicable, AND photo documentation. It is suggested that there be three photos (one landscape shot and transects shots).</td>
</tr>
<tr>
<td>e.</td>
<td>Check with your Area CRP contact before certifying questionable fields.</td>
</tr>
</tbody>
</table>

9. The stand of existing vegetation must reflect the species diversity for the offer – 10-point offer, 20-point offer, 40-point offer, 50-point offer. Individual species must meet the criteria shown below in Table 2.

**Table 2 – Species Diversity – Existing Herbaceous Plant Species**

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>

Reminder: The Original Shrub and Tree Plantings Were Implemented Years Ago With This Criteria:

- CP2 \( \leq 15'' \) ppt.: \( \geq 20 \) stems / offer acre
- CP3 Planner discretion, but needed 150 surviving stems after 2 years
- CP4D \( \leq 15'' \) ppt.: \( \geq 40 \) stems / offer acre
- CP4D \( \geq 15'' \) ppt.: \( \geq 40 \) shrubs / offer acre
  \( \geq 10 \) trees / offer acre

Table 3 – Species Diversity – Criteria for Existing Shrubs & Trees

We must remember that we are certifying based on the quality of the habitat & cover. Shrubs &/or trees may be counted toward composition for CP2, CP4B, CP4D and CP42 when they meet the criteria shown below in Table 3. For CP42 offers shrubs & trees must also be approved pollinators.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>Planted trees &amp; shrubs, AND native shrubs and trees that have established on the site naturally contribute to stand diversity and also to habitat. Both may be counted.</td>
</tr>
<tr>
<td>b.</td>
<td>Counting shrubs below (items C.-G.) assumes adequate understory stand density &amp; diversity. Refer to Table 4 for Enhancement Reduction when this is NOT the case.</td>
</tr>
</tbody>
</table>
| c. | For CP2, shrub cover is adequate with:  
  i. 1-3% shrub canopy cover on 5% of the offer acres, or  
  ii. Meeting Presence Condition 2 or 3 (1-19% canopy) on 5% of the offer acres, or  
  iii. 100 shrubs/acre of 10% of the offer acres, or  
  iv. 200 shrubs/acre on 5% of the offer acres |
| d. | For CP3, consult Forestry Technical note 10, table 1, column B for minimum reforestation density.  
  i. Note that the driest Ponderosa Pine sites require 194 trees / acre |
| e. | For CP4D \( \leq 15'' \) ppt., woody species cover is adequate with:  
  i. At least 20 stems / offer acre  
    1. On 10% of the offer acres – 200 shrubs/ha or 4% canopy cover  
    2. On 5% of the offer acres – 400 shrubs/ha or 8% canopy cover |
| f. | For CP4D \( > 15'' \) ppt, tree and shrub cover is adequate with:  
  i. At least 25 stems /offer acre on 10% of the offer acres – 250 stems/ha with 5% canopy cover |
NRCS Guidelines for Certifying CRP Fields (Continued)

*--Table 3 – Species Diversity – Criteria for Existing Shrubs & Trees (Continued)

<table>
<thead>
<tr>
<th>g. For CP4D, when trees have invaded the site (tree ONLY certification):</th>
</tr>
</thead>
<tbody>
<tr>
<td>i. Tree density: strips, blocks, patches must have a between 10 &amp; 100 trees/acre.</td>
</tr>
<tr>
<td>ii. Total tree numbers: will be limited to 1.0-1.5 trees/offer acre and 15% of the offer acres</td>
</tr>
<tr>
<td>iii. Tree numbers equates to:</td>
</tr>
<tr>
<td>1. 10 trees/acre on 15% of the offer acres,</td>
</tr>
<tr>
<td>2. Or 15 trees/acre on 10% of the offer acres,</td>
</tr>
<tr>
<td>3. Or 100 trees/acre on 1.5% of the offer acres</td>
</tr>
</tbody>
</table>

Enhancement needed when an existing multi-species stand does not meet the required components:

Enhancement is defined as a field or portion of a field that needs to be completely re-seeded to a required seed mixture or enhanced with one or more desirable species.

The acres required to be enhanced for an offer may be reduced using the conditions outlined in Table 4.

Table 4 – Enhancement Reduction Based on Existing Stand Conditions

<table>
<thead>
<tr>
<th>a. When an existing multi-species herbaceous stand does NOT have all of the required diversity components, but meets ALL other requirements, then the acres that are required to be enhanced are reduced by the percentage of desired species present divided by the total number of species in the mixture.</th>
</tr>
</thead>
<tbody>
<tr>
<td>i. 5 species mix w/ 2 desirable species present: 2/5 = requires a 60% enhancement</td>
</tr>
<tr>
<td>ii. 4 species mix w/ 1 desirable species present: 1/4 = requires a 75% enhancement</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>b. When the herbaceous cover does NOT meet stand density and species diversity criteria:</th>
</tr>
</thead>
<tbody>
<tr>
<td>i. 1% of the offer acres may be retained in dense shrub cover</td>
</tr>
<tr>
<td>ii. Areas with the best understory cover should be selected</td>
</tr>
<tr>
<td>iii. The amount of acres required to be seeded/planted is only reduced by 1%.</td>
</tr>
</tbody>
</table>

| c. When there is 1-3% shrub cover and the herbaceous cover meets stand density, BUT **NOT species diversity**: the amount of acres required to be seeded/planted is reduced by 20% for the shrubs, plus 20% for each herbaceous species present. |

Guidelines for Certifying New Seedings:

Certify on a field basis & use transects as outlined above. Count any plant that has reached at least the 5-leaf stage. First year stands shall have at least 3 plants /sq. ft. and meet the required plant diversity for the CRP offer. Second year stands shall meet the criteria for existing cover as listed above.--*

Aerial Seeding

If any practice is planted using aerial seeding with an airplane or helicopter, the seeding rates specified in this exhibit must be doubled unless waived by NRCS.

Instructions

Applicants should be provided copies of the pages from this Exhibit applicable to the practices they intend to offer during signup. These Example Specification Sheets are intended to provide general guidance to applicants and are not intended to replace or override NRCS specifications or the producer’s approved conservation plan of operations.

Note: Also see Exhibit 11 for STC policy concerning specific practices including CP12, CP15A, CP21, CP22, CP23 and CP29.
Legume/Forb Plantings in Strips and Blocks

For practices calling for a legume/forb in the mix, (CP1, CP2, CP4B, CP4D, CP25), participants are authorized to plant these species in strips or blocks. In many cases this could aid in weed control operations and stand vigor maintenance both within and outside the legume/forb planting. The wildlife benefits of these species are generally the greatest if they are scattered throughout the contract acreage. Consequently, the legume/forb plantings must be scattered across several locations in the contract, rather than in a single block.

For strip or block plantings, the following criteria must be met. Any exception to these requirements must be approved in advance by the FSA and NRCS State Offices.

1. Seed the entire acreage to the grass mix. Then seed legumes/forbs over top in a second seeding immediately afterward.

2. Plant legumes/forbs in strips a minimum of 72 feet wide.

3. Multiple legumes/forbs strips/blocks should be planted throughout the contract acreage. To the extent possible, plant on a variety of slopes/aspects, however, consideration should also be given to seeding in areas where legumes/forbs are expected to thrive. The number of strips/blocks will vary by the size of the contract acreage and number of non-contiguous fields.

4. A minimum of 10% and a maximum of 20% of the contract acreage must be planted to legumes/forbs.

5. *--A mix of native and/or introduced legumes and forbs should be planted. Blocks and strips should contain a grass component and not be solid stand of broadleaves. Adjust individual species seeding rates based on the number of species with the mix.

6. Weed control in the legumes/forbs strips should be accomplished using mowing. If herbicides are used, only products that will help maintain the planted legumes/forbs should be used.

7. Depending on the species and varieties planted, and the average annual rainfall of the site, legume/forb strips and blocks may need to be mowed every few years to maintain plant vigor.--*
EXAMPLE SPECIFICATION SHEET
PERMANENT INTRODUCED GRASSES AND LEGUMES

CRP Practice: CP1 (Technical Code 327)

Producer Name: _____________________________ Farm No.: _______ Tract No.: _______
Date: _______________ Contract No.: _______________ Acres: _______________
Field No.(s): __________________________________

DEFINITION AND PURPOSE

Perennial vegetative cover of introduced species will be established and maintained to protect soil and water resources on land retired from agricultural production. Primary purposes are to reduce soil erosion and sedimentation, improve water and air quality, and create, or enhance, wildlife habitat.

SEEDBED PREPARATION

The seedbed must be firm and weed-free prior to seeding to ensure good seed to soil moisture contact. Use minimum tillage as needed to achieve this condition. Do not create a smooth surface as some ridging and roughness are important.

Weed control prior to planting is essential for a successful seeding. Weeds may be controlled by tillage and/or using herbicides per label instructions. Summer fallow is an approved seedbed preparation method for fall plantings. Noxious weeds must be controlled in accordance with county and state noxious weed laws. Fertilize only as recommended by the County Extension Service, Natural Resources Conservation Service or qualified consultant.

SEEDING

Seeding may be accomplished by conventional or no-till methods although no-till drills must be closely monitored. Seed placement varies by species. A target depth is generally ¼” but never more than ½”. Some species however should not be planted deeper than ⅛”. One to two bushels/acre of clean (No. 1), sterile rice hulls, vermiculite or other suitable carrier may be necessary.

Seeding dates vary somewhat based on weather conditions and location within the state. Fall plantings, which are generally recommended in drier areas, should be done when the soil temperature at a depth of 2” drops below 40° Fahrenheit. In general, fall plantings should be done:
- between November 1 and February 15 in the upper Columbia Basin
- between November 15 and February 1 in the lower Columbia Basin
- between November 1 and March 15 in eastern Washington
Spring plantings in areas with 16” or higher annual precipitation should be done between March 15 and May 1.
Generally the cover must be initially planted within 12 months of the contract beginning date. NRCS or TSP may schedule an additional 12 months if the site calls for it, such as cases where a year of summer fallowing is recommended.

SEEDING MIXES

Seeding mixes must support the Environmental Benefits Index (EBI) score for the vegetative cover (N1a) that was submitted as part of the offer for CRP enrollment. Participants may choose from several mixes for the N1a point level they offered. Substitutions are not permitted unless approved in advance by NRCS. All seeding rates are in pounds of pure live seed (PLS) per acre. Seeding rates must be doubled for broadcast or aerial application.

Seed mixes shall have a minimum of 6 pounds/acre PLS in the driest areas. The minimum will be higher in higher rainfall areas. An additional guideline for CRP is that seed mixes generally should have a minimum of 40 seeds/sq. ft.

Approved species and seeding rates for forbs and legumes are found on the Tree, Shrub, Forb & Legume Rates in Mixture for CP1, CP2 and CP4D on page 7.

Mid-Contract Management Practices

5  Approved Management Practices (Continued)

I  Reseeding

Use on stands that have been depleted to the extent that they no long have the stand density to provide wildlife habitat, erosion control and water and air quality benefits. Seedbed preparation, seeding mixes and seeding rates will generally be the same as the original conservation plan but may be revised if recommended by NRCS or TSP.

Reseeding may be done on just the affected acres or strips or blocks that are at least as wide or wider than the available tillage and planting equipment. This is not interseeding using equipment that scalps a narrow area and then plants a single row into the scalped area. The seedbed should be prepared as it would be for a new seeding with a firm, weed free seedbed. On sloping fields this practice should be applied cross-slope or on contour. Other management practices may be used on the strips that are not tilled. Reseeding and any seedbed preparation shall not be done April 1 to July 1.

J  Riparian Buffer Practices

*--Other management activities provided in this exhibit may be applied to riparian buffers and hedgerows, as determined necessary by the TSP and COC. In addition, the following activities may be conducted as mid-contract management activities on riparian buffers and hedgerows:--*

- blackberry control
- “beaver cage” tree protectors
- thinning.

These activities must be conducted outside the April 1 – July 1 primary nesting season.

K  Other

Other locally recognized practices or a combination of practices may be used to maintain or improve stand vigor and diversity, or otherwise enhance habitat. The use of any method not listed in this document must be approved by the Washington State FSA Committee before they are included in a conservation plan and utilized.

EXAMPLE SPECIFICATION SHEET
ESTABLISHMENT OF PERMANENT NATIVE GRASSES

CRP Practice: CP2 (Technical Code 327)

Producer Name:_____________________________  Farm No.:_______  Tract No.:________
Date:_______________  Contract No.:______________  Acres:_________________
Field No.(s):________________________________

DEFINITION AND PURPOSE

Perennial vegetative cover of native species will be established and maintained to protect soil and water resources on land retired from agricultural production. Primary purposes are to reduce soil erosion and sedimentation, improve water and air quality, and create, or enhance, wildlife habitat.

SEEDBED PREPARATION

The seedbed must be firm and weed-free prior to seeding to ensure good seed to soil moisture contact. Use minimum tillage as needed to achieve this condition. Do not create a smooth surface as some ridging and roughness are important.

Weed control prior to planting is essential for a successful seeding. Weed may be controlled by tillage and/or using herbicides per label instructions. Summer fall is an approved seedbed preparation method for fall plantings. Noxious weeds must be controlled in accordance with county and state noxious weed laws. Fertilize only as recommended by the County Extension Service, Natural Resources Conservation Service or qualified consultant.

SEEDING

Seeding may be accomplished by conventional or no-till methods although no-till drills must be closely monitored. Seed placement varies by species. A target depth is generally ¼” but never more than ½”. Some species however should not be planted deeper than ⅛”. One to two bushels/acre of clean (No. 1), sterile rice hulls, vermiculite or other suitable carrier may be necessary.

Seeding dates vary somewhat based on weather conditions and location within the state. Fall seedings, which are generally recommended in drier areas, should be done when the soil temperature at a depth of 2” drops below 40° Fahrenheit. In general, fall seedings should be done:
  • between November 1 and February 15 in the upper Columbia Basin
  • between November 15 and February 1 in the lower Columbia Basin
  • between November 1 and March 15 in eastern Washington

Spring seedings in areas with 16” or higher annual precipitation should be done between March 15 and May 1.
Generally the cover must be initially planted within 12 months of the contract beginning date. NRCS or TSP may schedule an additional 12 months if the site calls for it, such as cases where a year of summer fallowing is recommended.

**SEEDING MIXES**

Seeding mixes must support the Environmental Benefits Index (EBI) score for the vegetative cover (N1a) that was submitted as part of the offer for CRP enrollment. Participants may choose from several mixes for the N1a point level they offered. Substitutions are not permitted unless approved in advance by NRCS. All seeding rates are in pounds of pure live seed (PLS) per acre. Seeding rates must be doubled for broadcast or aerial application.

Seed mixes shall have a minimum of 6 pounds/acre PLS in the driest areas. The minimum will be higher in higher rainfall areas. An additional guideline for CRP is that seed mixes generally should have a minimum of 40 seeds/sq. ft.

Approved species and seeding rates for trees, shrubs, forbs & legumes are found on the *Tree, Shrub, Forb & Legume Rates in Mixture for CP1, CP2 and CP4D* on page 12.

**CP2 Seed Mixes**

20-point stand: minimum of 3 species w/ at least 2 native grasses AND 1 forb or legume

50-point stand: minimum of 5 species w/ at least 3 native grasses AND 1 forb, legume, shrub or tree

- For CP4B and CP4D in >15 inch precipitation zone, 500 stems/acre will be planted on 10% of the offer acres. 20% of stems will be trees and 80% will be shrubs.
EXAMPLE SPECIFICATION SHEET – TREE PLANTING

CRP Practice: CP3 (Technical Code 612)

Producer Name:_____________________________  Farm No.:_______  Tract No.:_______

Date:_______________  Contract No.:______________  Acres:_______________

Field No.(s):_________________________________

DEFINITION AND PURPOSE

Perennial tree cover of trees will be established and maintained to provide food and cover for wildlife and to reduce soil erosion and sedimentation and improve water and air quality.

SITE PREPARATION

Trees and shrubs should be planted in sites that are favorable such as northern slopes and draws. West and south facing slopes should be avoided. Consider locating trees and shrubs on the upwind side to serve as a seed source for the entire offer.

Any competing vegetation, such as existing grass, should be controlled for 2 square feet around each plant either through mechanical scalping or herbicide.

PLANTING

Trees/shrubs should be planted when the plants are dormant and the soil is not frozen. Avoid fall planting where frost heaving could be a problem.

In general, planting should occur between November 1 and April 30, but the exact dates vary by site and weather conditions. For optimum survival, planting should occur when weather is cool and damp with little to no wind to prevent the plant roots from drying. Consult with the Natural Resources Conservation Service or your Technical Service Provider for the best time on a specific site.

Keep roots straight when planting to avoid "J rooting". The hole where the tree or shrub will be planted may be prepared with a planting bar, shovel, mattock or machine planter, depending on the size of the material planted. Keep the root crown at ground level, not above or below. Tamp soil around the plant after planting to remove air pockets and provide adequate root to soil contact. Fertilizer, if recommended, can be added by placing it in the hole prior to planting and mixing with the soil at the bottom of the hole, by placing fertilizer spikes, or by scattering around the base of the seedling. Use tree protectors on all seedling stock that is prone to rodent damage and bud caps or repellant on all seedling stock prone to browse by deer.
Plant spacing varies by species. As a general rule, shrubs should be planted on 4’ X 4’ to 6’ X 6’ spacings and trees on 8’ X 8’ to 10’ X 10’ spacings. Consult the Natural Resources Conservation Service for the specific spacings recommended for the species in your mix.

Continued control of competing vegetation immediately around the tree or shrub for the first year after planting significantly improves survival rates.

Generally the cover must be initially planted with 12 months of the contract beginning date. The Natural Resources Conservation Service or your Technical Service Provider can grant one 12 month extension if the site calls for it, such as cases where addition site preparation to control competing vegetation is recommended.

**TREE & SHRUB MATERIALS**

Stock should be adapted to the climate and elevation where you are planting. Consult the Natural Resources Conservation Service or your Technical Service Provider for the plant size and age best suited for your site. Use older stock when competition is high.

The following guidelines should be followed when the planting stock is received.

- When plants arrive the roots cannot be allowed to dry out (as little as 10 seconds is all that is needed to cause root damage and increase mortality.
- Stock should be stored in a cool, moist place until planted and roots should be treated with commercial root protectants or kept moist with water and wrapped with burlap or other suitable moisture retaining barrier.
- If planting will be delayed for an extended amount of time, seedlings may be "heeled in" by digging a trench, placing the seedlings in the trench, and covering the roots with soil.
- Plants should be thoroughly moistened prior to planting.

EXAMPLE SPECIFICATION SHEET – PERMANENT WILDLIFE HABITAT CORRIDORS AND PERMANENT WILDLIFE HABITAT

CRP Practice: CP4B & CP4D (Technical Code 327 & 612)

Producer Name:_____________________________ Farm No.:_______ Tract No.:________
Date:______________ Contract No.:______________ Acres:______________
Field No.(s):________________________________________

DEFINITION AND PURPOSE

Perennial vegetative cover of native and introduced species will be established and maintained to provide food and cover for wildlife and to reduce soil erosion and sedimentation and improve water and air quality.

SEEDBED PREPARATION

The seedbed must be firm and weed-free prior to seeding to ensure good seed to soil moisture contact. Use minimum tillage as needed to achieve this condition. Do not create a smooth surface as some ridging and roughness are important.

Weed control prior to planting is essential for a successful seeding. Weeds may be controlled by tillage and/or using herbicides per label instructions. Summer fallow is an approved seedbed preparation method for fall plantings. Noxious weeds must be controlled in accordance with county and state noxious weed laws. Fertilize only as recommended by the County Extension Service, Natural Resources Conservation Service or qualified consultant.

SEEDING

Seeding may be accomplished by conventional or no-till methods although no-till drills must be closely monitored. Seed placement varies by species. A target depth is generally ¼” but never more than ½”. Some species however should not be planted deeper than ⅛”. One to two bushels/acre of clean (No. 1), sterile rice hulls, vermiculite or other suitable carrier may be necessary.

Seeding dates vary somewhat based on weather conditions and location within the state. Fall seedings, which are generally recommended in drier areas, should be done when the soil temperature at a depth of 2” drops below 40°F Fahrenheit. In general, fall seedings should be done:
- between November 1 and February 15 in the upper Columbia Basin
- between November 15 and February 1 in the lower Columbia Basin
- between November 1 and March 15 in eastern Washington
Spring seedings in areas with 16” or higher annual precipitation should be done between March 15 and May 1.
Generally the cover must be initially planted with 12 months of the contract beginning date. The Natural Resources Conservation Service or your Technical Service Provider can grant one 12 month extension if the site calls for it, such as cases where a year of summer fallowing is recommended.

SEEDING MIXES

Seeding mixes must support the Environmental Benefits Index (EBI) score for the vegetative cover (N1a) that was submitted as part of the offer for CRP enrollment. Participants may choose from several mixes for the N1a point level they offered. Substitutions are not permitted unless approved in advance by the Natural Resources Conservation Service. All seeding rates are in pounds of pure live seed (PLS) per acre. Seeding rates must be doubled for broadcast or aerial application.

*--Seed mixes shall have a minimum of 6 pounds/acre PLS in the driest areas. The minimum will be higher in higher rainfall areas. An additional guideline for CRP is that seed mixes generally should have a minimum of 40 seeds/sq. ft.

Approved species and seeding rates for trees, shrubs, forbs & legumes are found on the Tree, Shrub, Forb & Legume Rates in Mixture for CP1, CP2 and CP4D on page 20.--*

TREE & SHRUB SITE PREPARATION

Trees and shrubs should be planted in sites that are favorable such as northern slopes and draws. West and south facing slopes should be avoided. Consider locating trees and shrubs on the upwind side to serve as a seed source for the entire offer.

Any competing vegetation, such as existing grass, should be controlled for 2 square feet around each plant either through mechanical scalping or herbicide.

TREE & SHRUB PLANTING

Trees/shrubs should be planted when the plants are dormant and the soil is not frozen. Avoid fall planting where frost heaving could be a problem.

In general, planting should occur between November 1 and April 30, but the exact dates vary by site and weather conditions. For optimum survival, planting should occur when weather is cool and damp with little to no wind to prevent the plant roots from drying. Consult with the Natural Resources Conservation Service or your Technical Service Provider for the best time on a specific site.
Keep roots straight when planting to avoid "J rooting". The hole where the tree or shrub will be planted may be prepared with a planting bar, shovel, mattock or machine planter, depending on the size of the material planted. Keep the root crown at ground level, not above or below. Tamp soil around the plant after planting to remove air pockets and provide adequate root to soil contact. Fertilizer, if recommended, can be added by placing it in the hole prior to planting and mixing with the soil at the bottom of the hole, by placing fertilizer spikes, or by scattering around the base of the seedling. Use tree protectors on all seedling stock that is prone to rodent damage and bud caps or repellent on all seedling stock prone to browse by deer.

Trees and shrubs should be planted in clumps to improve wildlife cover and provide edge effect. Plant spacing varies by species. As a general rule, shrubs should be planted on 4’ X 4’ to 6’ X 6’ spacings and trees on 8’ X 8’ to 10’ X 10’ spacings. Consult the Natural Resources Conservation Service for the specific spacings recommended for the species in your mix.

Continued control of competing vegetation immediately around the tree or shrub for the first year after planting significantly improves survival rates.

**TREE & SHRUB MATERIALS**

Stock should be adapted to the climate and elevation where you are planting. Consult the Natural Resources Conservation Service or your Technical Service Provider for the plant size and age best suited for your site. Use older stock when competition is high.

The following guidelines should be followed when the planting stock is received.

- When plants arrive the roots cannot be allowed to dry out (as little as 10 seconds is all that is needed to cause root damage and increase mortality.
- Stock should be stored in a cool, moist place until planted and roots should be treated with commercial root protectants or kept moist with water and wrapped with burlap or other suitable moisture retaining barrier.
- If planting will be delayed for an extended amount of time, seedlings may be "heeled in" by digging a trench, placing the seedlings in the trench, and covering the roots with soil.
- Plants should be thoroughly moistened prior to planting.

**MANAGEMENT**

Participants must develop and implement a wildlife conservation plan with the Natural Resources Conservation Service or their Technical Service Provider.
**CP4B and CP4D Seed Mixes**

*--Approved species and seeding rates for trees, shrubs, forbs & legumes are found on the *Tree, Shrub, Forb & Legume Rates in Mixture for CP1, CP2 and CP4D* on page 20.--*

**40-point stand:**
1. Minimum of 4 species w/ at least 2 grasses AND 1 shrub or tree
2. 4th species may be a grass, forb, legume, shrub or tree

**50-point stand:**
1. Minimum of 5 species w/ at least 2 native grasses AND 1 shrub or tree
2. 4th species may be a forb, legume, shrub or tree
3. 5th species may be a native grass, forb, legume, shrub or tree

**40-Point CP4D:** Use CP1 seed mixes with introduced and native grasses

**50-Point CP4D:** Use CP2 seed mixes with native grasses only

**A Few Preferred Seed Mixes:**

EXAMPLE SPECIFICATION SHEET
VEGETATIVE COVER, GRASS, ALREADY ESTABLISHED

CRP Practice: CP10

Producer Name: ____________________________  Farm No.: ______  Tract No.: ______

Date: ______________  Contract No.: ____________  Acres: ______________

Field No.(s): ______________________________

Note: Practice CP10 is only authorized for general signups 39 and prior.

DEFINITION AND PURPOSE

Perennial vegetative cover of established grasses will be maintained to protect soil and water resources on land retired from agricultural production. Primary purposes are to reduce soil erosion and sedimentation, improve water and air quality, and to maintain wildlife habitat.

OPERATION AND MAINTENANCE

The stand must support the point score awarded the offer to enroll in terms of stand density and diversity. Stands that do not meet both of these criteria must be enhanced. Cost sharing for this enhancement will be based on the determination to accept or decline cost sharing in the participant’s offer.

Stands of perennial cover shall be properly maintained and managed to meet stand density criteria. Necessary actions shall be taken to maintain stand requirements. To increase plant density in a poor stand, consider mowing or harrowing in the fall. To revitalize a dying stand, consider mowing, harrowing, interseeding, prescribed burning, or a combination of these treatments. Burning requires an approved plan and permits. Herbicides may be needed to control weeds, but could eliminate legumes, or forbs, from the stand. Critically eroded areas require on-site follow-up to ensure establishment and to maintain adequate cover. Some areas may require annual re-seeding, weed control, mulching, mowing, fertilizer, etc. All existing or subsequent concentrated flow erosion through the grass stand shall be treated. Development of rills and small channels must be minimized.

EXAMPLE SPECIFICATION SHEET – WILDLIFE FOOD PLOT

CRP Practice: CP12 (Technical Code 645)

Producer Name: ___________________________ Farm No.: ________ Tract No.: ________
Date: _______________ Contract No.: _______________ Acres: _______________
Field No.(s): _______________________________

DEFINITION AND PURPOSE

Retiring land from agricultural production by establishing and maintaining annually planted areas 1-5 acres in size to food bearing plants to provide a food source for wildlife during the winter months to reduce wildlife mortality.

SITE SELECTION

Areas to be planted to food plots should be:
• close to existing or new permanent woody vegetation if possible to provide thermal cover and protection from predators.
• in a location where moisture is higher to facilitate adequate plant growth such as draws or north facing slopes.
• within 1/2 mile of a permanent water source.

PLANTING CRITERIA

• Seedbed preparation should result in a firm weed free seedbed. If no-till is used, spraying should be accomplished 2 weeks prior to seeding.
• Soil temperature should be at least 55 degrees for proper germination of corn, grain sorghum, sorghum/sudan, and millet.
• Plant in areas protected by wind to avoid snow drifting within the food plot. Arranging the plot so that the taller crops are on the windward side helps to protect the food plot from snow drifts.
• Weed control should be selective so that only noxious weeds, those that pose a threat to the success of the food plot and those that could adversely affect adjacent non-CRP land are controlled. Many weeds provide benefit to wildlife by providing additional cover and a food source.
• Drills may need to be modified to accomplish the recommended row spacing and planting rates shown below.
  o Cardboard can be used to compartmentalize regular grain drills.
  o Buckets can be used with funnels inserted through a hole drilled in the bottom of the bucket and inserted into the appropriate openings.
ADDITIONAL CRITERIA

Once established the crop should be left standing through the winter and at least until the first of March of the following year. If there is food remaining after one season it may be left for another season. For crops left for two seasons, the site should be split and one-half planted each year. The food plot area can be planted to cereal grains as a clean-up crop once every 3-4 years. However only one-half of the food plot can be planted to a small grain crop in any one year and will be left standing overwinter. No grazing is allowed. Exclude all livestock from the food plot during the contract period.

SAFE (FERRUGINOUS HAWK) PROJECT

Definition and Purpose

*--The SAFE (Ferruginous Hawk) project is authorized in Adams, Benton and Franklin counties. See WA Exhibit 33 for eligible areas to enroll land under SAFE (Ferruginous Hawk). Eligible land is located within 5 kilometers (3.1 miles) of identified nesting sites. Eligible areas are available in GIS. Approved practices for the SAFE (Ferruginous Hawk) project are listed below. In implementing these practices, follow the guidance in the WA supplements to national Exhibit 11 for the CP38 practices and the materials in this exhibit.

Seedbed Preparation and Seeding

Site Preparation: A very clean field is needed before planting native species. Chemical fallowing should be an allowable option for year 1 of the CRP contract. A fallow season prior to CRP planting improves weed control (and volunteer winter wheat control) and soil moisture for improved stand establishment.

Example: If the offered field is coming out of crop year, the fallow season could be year 1 of CRP contract. If offer is coming out of a fallow year, CRP must be planted according to the plan in year 1 of the contract.--*
EXAMPLE SPECIFICATION SHEET
RARE AND DECLINING HABITAT – NATIVE SHRUB AND GRASSLAND STEPPE

CRP Practice: CP25 (Technical Code 327)

Producer Name: ___________________________ Farm No.: ________ Tract No.: ________
Date: __________ Contract No.: __________ Acres: ______________
Field No.(s): ____________________________

PURPOSE

• To reduce wind and water erosion on cropland occurring in the Washington shrub-steppe region.
• To generate a native plant community that will provide food and cover for wildlife.
• To recreate a functioning plant community that is self-sustaining and resilient.
• To generate a seed source of native plants for downwind sites.

CONDITIONS WHERE PRACTICE APPLIES

The CP25 Restoration of Native Shrub-Steppe practice applies to cropland in eastern Washington that are mapped as shrub-steppe vegetation habitat. A map delineating appropriate areas is provided.

CRITERIA

This practice is applicable in cropland that has been properly enrolled and accepted into the Conservation Reserve Program.

CONSIDERATIONS

Restoring native shrub-steppe can be a daunting task if not properly implemented. There are many factors that must be considered beyond species selection. Restoration plantings begin with the management of the previous crop. Successful installation of a planting should not be viewed as the end to the process. Weed control may be needed for at least an additional year after establishment of the restoration planting.

Previous Crop:

The previous crop can impact restoration plantings. Herbicide residues, particularly the sulfonyl urea herbicides, can adversely impact survival of native forbs and legumes. Heavy crop residues must be spread to improve depth of seed placement, improve seed to soil contact, and reduce zones of high weed growth associated with residue windrows.
Seeding:

Two planting scenarios are listed along with seeding techniques. Only those techniques which are low to moderate risk should be practiced.

1. Till Fallow One Year Then Sow

- Competition from existing vegetation is removed
- Vegetative cover for rodents is destroyed
- Timing of fallow operations not as critical as spray operations
- Tillage can greatly reduce weed seed populations
- Moisture stored during fallow period
- Soil erosion can be severe
- Some tillage operations can greatly dry and loosen the soil
- Lose wildlife habitat during fallow period

  ➢ **Double-disk openers** with or without depth bands can be used. Seeding should be postponed until after fall rains have settled the soil and fall germinating cheatgrass controlled. Relatively LOW risk.
  ➢ **Broadcast seeding** will require doubling the seeding rate. Fall germinating cheatgrass must be controlled prior to seeding. Harrowing immediately before seeding is generally superior to harrowing after seeding. Relatively HIGH risk.
  ➢ **Hoe openers** should be discouraged because inadequate control of seed depth placement. Relatively HIGH risk.
  ➢ **Hoe Drills with packer wheels** have provided some very good stands providing that the tubes are pulled which allows the seed to fall into the compacted furrow. Relatively MODERATE Risk.

2. Chemical Fallow One Year Then Sow

- Competition from existing vegetation is removed
- Soil erosion hazard is reduced
- Dead vegetation can shelter seedlings from adverse conditions
- Dead vegetation can interfere with drill operation
- Rodent activity can be very high
- Dormant weed seeds in the soil may not adequately reduced
- Timing of spray applications critical.
3. Chemical Fallow One Year Then Sow (Continued)

- **Double-disk openers** with or w/o depth bands can be used. Proper seed depth placement may be difficult. Relatively LOW to MODERATE risk.
- **Broadcast seeding** will require doubling the seeding rate. Fall germinating cheatgrass must be controlled prior to seeding. Harrowing improves seed to soil contact but can result in more cheatgrass. Relatively HIGH risk.
- **Hoe openers** should be discouraged because inadequate control of seed depth placement. Trash can accumulate on hoe openers. Relatively HIGH risk.
- **Hoe Drills with packer wheels** have provided some very good stands providing that the tubes are pulled which allows the seed to fall into the compacted furrow. Relatively MODERATE Risk.

**Transplanting:**

Transplanting shrubs and certain forbs is an option with the exception of the flax and western yarrow. Transplanting shrubs has been very effective in previous CRP plantings. Seed of native forbs and legumes can be very expensive and in very short supply. Transplanting live forbs and/or legumes enables participants to increase the species diversity of their plantings without investing in large amounts of seed. Transplanting should occur immediately after seeding of the grass component. Waiting a year after grass establishment does offer some broadleaf weed control options but careful observations have shown that transplant survival and growth is compromised.

Transplants should be disbursed throughout the planting and sites with favorable soil moisture should be emphasized. Transplants require a long root system (minimum 5-inches) and a minimum of a 1:1 root: shoot ratio. Root volumes less than 8 cubic inches are discouraged. If transplanting occurs one year after seeding of the grasses, then all competing vegetation within 1.5-foot radius needs to be controlled for each transplant. A listing of species appropriate for transplanting is provided.

For woody vegetation established by transplanting, 40 stems per offer acre must be planted. While transplants should be disbursed throughout the contract, they may be clumped on the best sites.

**Species Selection:**

The native shrub-steppe is composed of many species. Unfortunately many of the species are not commercially available. Substituting species from other areas is possible but great care must be exercised.

The Washington NRCS recognizes the fact that local, endemic plant germplasm is more desirable for “true” restoration plantings. However, native shrub-steppe plant cultivars may be satisfactory for CP-25 plantings if true native material is not available. The Native Seed Network (www.nativeseedsnetwork.org) and Native Plant Network (www.nativeplantnetwork.org) should be consulted to determine the availability of native plant materials. In the absence of native material availability at a reasonable cost, consult the attached listing of seed mixes that are best suited for your planting.

**Note:** When transplanting plugs, bare root plants, or similar materials, 40 stems per offer acre must be planted. Transplants should be disbursed throughout the contract but may be clumped in the best sites.

### Use of Map

The map on page 32 of this exhibit identifies the areas where the CP25, Native Shrub and Grassland Steppe, practice is approved. If it is unclear if an offer is located within the eligible area, comparison with a Common Resource Area (CRA) map and descriptive data will help determine if the site is suitable for the CP25 practice. The map and data are available from NRCS and may be accessed through GIS.
EXAMPLE SPECIFICATION SHEET
RARE AND DECLINING HABITAT – NATIVE SHRUB AND GRASSLAND STEPPE

MAP OF ELIGIBLE AREA
EXAMPLE SPECIFICATION SHEET
RARE AND DECLINING HABITAT – PALOUSE PRAIRIE

CRP Practice: CP25 (Technical Code 327)

Producer Name: ___________________________      Farm No.: _______      Tract No.: _______
Date: _______________      Contract No.: _______________      Acres: _______________
Field No.(s): _________________________________

PURPOSE

To reduce wind and water erosion on cropland occurring in the Washington Palouse Prairie region.
To generate a native plant community that will provide food and cover for wildlife.
To recreate a functioning plant community that is self-sustaining and resilient.
To generate a seed source of native plants for adjacent sites.

CONDITIONS WHERE PRACTICE APPLIES

The CP25 Restoration of Native Palouse Prairie practice applies to cropland in southeastern Washington
that is mapped as Steppe vegetation habitat. The Palouse Prairie steppe can be broken into 2 plant
community associations: 1) Bluebunch Wheatgrass – Idaho Fescue association that occurs in the drier,
west-side of the Palouse, and 2) Idaho Fescue – Snowberry association that occurs on the moister, east-
side of the Palouse. Table 1 provides a rough breakdown of plant species associated with the two zones.
The drier Bluebunch Wheatgrass – Idaho Fescue community is dominated by these two grasses and
forbs are interspersed throughout the stand. Shrubs are minor components.

The moister Idaho Fescue – Snowberry community has a much larger forb component. Bluebunch
wheatgrass is common and is mostly comprised of the rhizomatous ecotype. Snowberry and wild rose
occurrences are high but tend to make-up a minor portion of the total canopy. Large shrubs such as
Douglas hawthorn are common on north slopes.

CRITERIA

This practice is applicable in cropland that has been properly enrolled and accepted into the
Conservation Reserve Program.

CONSIDERATIONS

Restoring native Palouse prairie can be a daunting task if not properly implemented. There are many
factors that must be considered beyond species selection. Restoration plantings begin with the
management of the previous crop. Successful installation of plantings should not be viewed as the end
to the process. Weed control will be needed for at least an additional year after establishment of the
restoration plantings.
Previous Crop:

The previous crop can impact restoration plantings. Heavy crop residues must be reduced to improve depth of seed placement and improve seed to soil contact. Fall plowing, baling straw, and field burning in some cases are tools available to growers. Weeds and volunteer grain must be considered when planning a planting.

Seeding:

Four planting scenarios are listed along with seeding techniques. Producers should not employ practices that are HIGH risk.

1. Fall Plow and Spring Sow
   - Fall plowing buries trash and improves decomposition
   - Spring seedbed preparation can commence earlier in the spring
   - Vegetative cover for rodents is destroyed
   - Weeds are greatly reduced
   - Soil erosion can be a hazard
     - **Double-disk openers with depth bands**. Relatively LOW risk.
     - **Double-disk openers without depth bands** will require careful adjustment of press wheels to control seeding depth. Relatively MODERATE risk.
     - **Broadcast seeding** will require doubling the seeding rate. Harrowing improves seed to soil contact but can result in deep burial of seed. Relatively MODERATE risk.
     - **Hoe openers** should be discouraged because inadequate control of seed depth placement. Relatively MODERATE risk.

2. Fall Chisel and Spring Sow
   - Erosion hazard is reduced
   - Trash decomposition will be incomplete and may interfere with seeding
   - Vegetative cover for rodents is reduced
     - **Double-disk openers with depth bands**. Relatively LOW risk.
     - **Double-disk openers without depth bands** will require careful adjustment of press wheels to control seeding depth. Relatively MODERATE risk.
     - **Broadcast seeding** will require doubling the seeding rate. Harrowing improves seed to soil contact but can result in deep burial of seed. Relatively MODERATE risk.
     - **Hoe openers** should be discouraged because inadequate control of seed depth placement. Relatively MODERATE risk.
3. **Spring Glyphosate and Direct Drill**

- Standing crop residue will reduce erosion hazard
- Trash will interfere with drill operation
- Glyphosate applications must be delayed until after a good flush of spring weeds
- Vegetative cover for rodents is maintained

- **Double-disk openers with depth bands.** Relatively LOW - MODERATE risk.
- **Double-disk openers without depth bands** will require careful adjustment of press wheels to control seeding depth. Relatively LOW – MODERATE risk.
- **Broadcast seeding** will require doubling the seeding rate. Harrowing improves seed to soil contact but can result in deep burial of seed. Relatively HIGH risk.
- **Hoe openers** should be discouraged because inadequate control of seed depth placement. Relatively MODERATE - HIGH risk.

4. **Spring Glyphosate, Burn and Direct Drill**

- Standing residue protects soil during the winter months
- Dense patches of crop residue are destroyed in the spring
- Glyphosate applications must be delayed until after a good flush of spring weeds
- Vegetative cover for rodents is maintained

- **Double-disk openers with depth bands.** Relatively LOW risk.
- **Double-disk openers without depth bands** will require careful adjustment of press wheels to control seeding depth. Relatively LOW risk.
- **Broadcast seeding** will require doubling the seeding rate. Harrowing improves seed to soil contact but can result in deep burial of seed. Relatively HIGH risk.
- **Hoe openers** should be discouraged because inadequate control of seed depth placement. Relatively MODERATE – HIGH risk.

Fall Seeding perennial grasses is not commonly practiced in the Palouse. Cool fall temperatures limit seedling growth and winterkill can be high. Native forbs of the Palouse frequently require a period of cold stratification for good germination. A fall seeding satisfies this cold requirement.

Separate grass and forb seeding operations are neither practical nor economical. Consequently the NRCS is recommending that forbs and shrubs should be added as transplants with the exception of Lewis flax, western yarrow and lupine. These three species lack a cold stratification requirement and can be easily established with spring grass seedings.
Seeding Rate:

The seeding rates for establishing native Palouse Prairie are generally higher than conventional CRP seedings. The grass species that occur in Palouse prairie are poor reseeders so thin stands rarely fill-in. Perennial weeds quickly fill the voids in thin stands and the process of establishing a restoration planting must be reinstituted. The cost of removing a weak stand and replanting will exceed the cost of a heavy seeding rate in the initial planting.

Transplanting:

Seed of native forbs and legumes can be very expensive and in very short supply. Transplanting live forbs and/or legumes enables participants to increase the species diversity of their plantings without investing in large amounts of seed. Transplanting should occur soon after seeding of the grass component. Waiting a year after grass establishment does offer some broadleaf weed control options but research has shown that transplant survival and growth is compromised.

Transplants should be disbursed throughout the planting and sites with favorable soil moisture should be emphasized. Transplants require a long root system (minimum 5-inches) and a minimum of a 1:1 root: shoot ratio. Root volumes less than 8 cubic inches are discouraged. If transplanting occurs one year after seeding of the grasses, then all competing vegetation within 1-foot radius needs to be controlled for each transplant. A listing of species appropriate for transplanting is provided.

For woody vegetation established by transplanting, 40 stems per offer acre must be planted. While transplants should be disbursed throughout the contract, they may be clumped on the best sites.

Species Selection:

The Palouse prairie is composed of many species. Unfortunately many of the species are not commercially available. The Washington NRCS recognizes the fact that local, endemic plant germplasm is more desirable for “true” restoration plantings. However, native plant cultivars shall be satisfactory for CP-25 plantings if true native material is not available. The Native Seed Network (www.nativeseednetwork.org) and Native Plant Network (www.nativeplantnetwork.org) should be consulted to determine the availability of native plant materials. In the absence of native material availability at a reasonable cost, consult the attached listing of seed mixes that are best suited for your planting.
Table 1. Percent canopy coverage of steppe species occurring along a moisture gradient in the Palouse Prairie zone as described by R. Daubenmire (1966) \(^1\).

Note: When transplanting plugs, bare root plants, or similar materials, 40 stems per offer acre must be planted. Transplants should be disbursed throughout the contract but may be clumped in the best sites.

Use of Map

The map on page 32 of this exhibit identifies the areas where the CP25, Native Shrub and Grassland Steppe, practice is approved. If it is unclear if an offer is located within the eligible area, comparison with a Common Resource Area (CRA) map and descriptive data will help determine if the site is suitable for the CP25 practice. The map and data are available from NRCS and may be accessed through GIS.
EXAMPLE SPECIFICATION SHEET
RARE AND DECLINING HABITAT – PALOUSE PRAIRIE

MAP OF ELIGIBLE AREA
Example Specification Sheet
Pollinator Habitat

CRP Practice CP42

Producer Name: _______________________________ Farm No.: _______ Tract No.: _______

Date: _______________ Contract No.: _______________ Acres: _______________

Field No.(s): ________________________________

DEFINITION AND PURPOSE

The purpose of this practice is to establish habitat to support a diversity of pollinator species. If EBI points have been awarded for this practice, that larger of 10% of the contract acreage or 1.0 acre must be planted to CP42. CP42 may be planted in strips or blocks, although blocks are preferred. If planted in strips, each strip must be a minimum of 20 feet wide. Each strip or block must include a minimum of 0.5 acres. Multiple strips or blocks across the contract acreage are preferred, beyond the minimum described above, size and placement can take into account the participant’s management needs.

PLANT SELECTIONS

• Select plants from the list that corresponds to your precipitation range.
• Species with an asterisk (*) are known to establish easily and are commercially available in large quantities. It is strongly recommended several of these species be included in all mixes. The remainder of species for each mix will be dependent on seed availability and the price the landowner is willing to pay.
• Species not included on these lists may be substituted only if approved by the State Plant Materials Specialist.

MINIMUM NUMBER AND TYPE OF SPECIES

For areas with 12 inches or less of average annual precipitation, a minimum of 5 flowering species are required, with at least 1 species that flowers in each of the periods April-June 15, June 15-July, and August-October.

Note: Because seeding rates on the approved plant lists are based on 1/9 of the mix, some species will have to be doubled or tripled.
For areas with **12-16 inches of average annual precipitation**, a minimum of 9 flowering species are required. The mix must include:
- at least 3 species that flowers in each of the periods April-June 15 and June 15-July
- the higher of 1 species or the number of NRCS feels will survive, that flowers in the period August-October.

**Note:** Because seeding rates on the approved plant lists are based on 1/9 of the mix, the late blooming specie(s) will have to be doubles or tripled.

For areas with **more than 16 inches in average annual precipitation**, a minimum of 9 flowering species are required, with at least 3 species that flowers in each of the periods April-June 15, June 15-July, and August-October.

**RECOMMENDED ESTABLISHMENT PROTOCOLS**

- Eliminate existing vegetation prior to seeding with tillage, herbicide, or a combination of techniques.
- For areas with 16 inches or less in annual precipitation, fallow the area to be seeded for one growing season. Delay seeding until after a flush of fall germinating weeds. These weed seedlings need to be controlled prior to any seeding.
- Very weedy fields should be fallowed for one growing season.
- Create a firm weed-free seedbed. As a rule of thumb, a person’s footprint should not be deeper than ½ inch.

**SEEDING**

Seed forbs and grasses at the same time in a late fall dormant planting (November or December).

**For areas with 16 inches or less in annual precipitation:**

One of two seeding methods is recommended:
1. Pull the tubes on the split packer drill and allow the seed to be broadcast on the surface, or
2. Run an empty split packer wheel drill through the field and then broadcast seed the field.

- Cracked grain or granular clay may be used to assist seed flow.
- Omit grasses from the planting mix in areas heavily infested with cheatgrass to allow for the option of using selective grass herbicides. This should only be done if the ground is not highly erodible.
For areas with greater than 16 inches in annual precipitation:

- Ideally, if grasses are included in a mix they should be seeded in the spring (May) and forbs should be seeded in the fall (late October). This allows for another season of broad-leaf weed control with application of selective herbicides. If two seedings cannot be performed, grasses and forbs should be seeded together in the fall. Forbs should not be seeded in the spring because most need a cold-moist period to break seed dormancy.
- The drill should be set to place the seed no deeper than ¼ inch. Do NOT harrow after seeding. To acquire very thin soil coverage, either use press wheels, drag chains, or a roller packer. Double the seeding rate in draws and other areas where concentrated water flow may occur.
- Cracked grain or granular clay may be used to assist seed flow.
- Omit grasses from the planting mix in areas heavily infested with cheatgrass, ventenata, jointed goatgrass or wild oats to allow for the option of using selective grass herbicides. This should only be done if the ground is not highly erodible.

SHRUB ESTABLISHMENT

- Establish shrub seedlings in March – April directly into sod with vegetation that has been killed with 1-2 applications of glyphosate. Plant shrubs in areas that will not be mowed, or in rows to allow for mowing between the rows.
- Suppress weed growth around the shrubs with use of weed barrier fabric or glyphosate.
- Tubes or other barriers to prevent damage from rodents, rabbits and deer are recommended.

MANAGEMENT

- Manage weeds during the first year by mowing to prevent weed seeds from disseminating.
- Manage weeds during the years following by spot spraying, using pre-emergent herbicides or herbicides applied during phases of perennial dormancy.
- Do not use fertilizers during the first year of establishment.

There are multiple challenges associated with establishing forb plots. Many forb seedings fail due to low germination, weed competition, and neglect. Establishing, monitoring and maintaining forb plantings is expensive and labor-intensive. The area may have to be re-seeded if an adequate stand is not achieved the first time.
SELECTING PLANT SPECIES FOR CP42 POLLINATOR HABITAT

*--Below are mixes for CP42 Pollinator Habitat. All of the forbs and shrubs in these mixes attract generalist pollinators that utilize pollen and nectar from a variety of plant species. Mixes are based on annual precipitation. Presented for each precipitation zone are a LOW COST MIX and a HIGH COST MIX. The LOW COST MIX contains both native and introduced species and the HIGH COST MIX contains only native species, some of which are seedlings. Grasses are included in the mixes because they provide ground cover. Grasses, however, cannot exceed 25% of the total seeds/sq. ft. rate in a mix. Grasses help to reduce weed competition and the potential for soil erosion.

The HIGH COST MIX contains seedling transplants. Transplanted seedlings are desirable because of their higher rate of success, as compared to seeded species. Seedlings should be planted in clumps of 10 or in rows. Planting seedlings in clumps, or rows, will aid weed management. Producers may elect to plant more seedlings to get a 60/acre survival rate.

For the 12 – 16” precipitation zone, double or triple the seeding rate for the fall blooming species, if only two or one fall blooming species are available.

EXAMPLE SPECIFICATION SHEET – USE EXCLUSION

CRP Practice: All (Technical Code 472)

Producer Name:_____________________________ Farm No.:_______ Tract No.:_______

Date:_______________ Contract No.:______________ Acres:_________________

DEFINITION AND PURPOSE

Excluding animals, people, or vehicles from areas where vegetative establishment and maintenance, soil condition, water or air quality, wildlife or aesthetic values are in need of protection.

Animals:
All domestic animals are required to be excluded from ground enrolled in CRP for the life of the contract. The only exceptions are when a grazing is done in accordance with an approved:
• CRP Managed or Routine Grazing Plan (limited to once every four (4) years), or
• grazing plan following authorization of Emergency CRP Grazing due to widespread drought conditions.
In both cases, prior approval by the FSA County Committee is required.

Vehicles:
Vehicle traffic should be limited in the CRP. If you need to use the CRP for access for harvest or other farming operations it should be limited to prevent a road from being established. These roadways produce areas where erosion can take place if traveled enough to restrict the growth of the grass. Try to drive in different areas to allow the grass a chance to regenerate. Areas where the vegetation has been destroyed will need to be replanted to grass.

Equipment:
Farm equipment may be stored on CRP during the period of use. The equipment shall be removed after the period of use. Extended storage of equipment on CRP is not permitted.

Hay:
Hay stacks or other hay storage are not permitted on CRP.

People:
Large gatherings of people on CRP contracted acres are not permitted unless approved in advance by the FSA County Committee.

Other:
Any activity that may have the potential to harm the vegetative cover on CRP contract acres, or the environmental benefits derived from it, is not allowed unless previously approved by the FSA County Committee.
SPECIFICATION SHEET – WILDLIFE WATERING FACILITY

CRP Practice: All (Technical Code 648)

Producer Name: ____________________________    Farm No.: ________    Tract No.: ________

Date: _______________    Contract No.: ____________    Acres: ______________

DEFINITION AND PURPOSE

Installing a wildlife watering facility to add new, additional, or improved watering places to increase the range or habitat for wildlife.

INSTALLATION

Site Selection:

• Watering facility should be placed in areas where erosion will not damage the facility or contaminate water in the storage tank.
• Watering facility should be placed in sites that are not visible from a road.
• Area should level to nearly level for a minimum of 10 feet in all directions from the site.
• The opening of the cistern should face opposite of prevailing winds and in a direction that minimizes exposure of water to sunlight. If possible, also place the long axis of the roof perpendicular to prevailing wind direction to minimize wind damage to the metal roofing.
• The collecting apron should not be overhung by branches that could interfere with interception of water and drainage.
• The cistern should have woody vegetation close by for escape cover and protection from predation.

Installation Criteria:

• The cistern tank and top shall be made from approved materials, such as fiberglass or polyethylene.
• All timber and lumber in contact with the ground will be 0.40 pressure treated lumber.
• The collection apron will be constructed with 2x4 frame and corrugated galvanized sheet metal.
• The rim of the cistern tank will be installed to an elevation of not more than 5" above original ground surface.
• Excavated material will be spread away from the tank to ensure that surface runoff will not flow into the area near the installation site.
• All rocks will be removed from the excavated hole to a depth of 3" below final grade elevation to minimize damage to the cistern. Rocky areas need a minimum of 3" of sand bedding around the tank.
• Compact and shape the soil on the sides and bottom of the hole to provide maximum support and contact area for the floor and walls of the cistern. After cistern placement in the hole fill and compact soil into any remaining spaces around the outside walls of the cistern.
• The aprons will be constructed as shown on the attached drawing and situated above the cistern. The actual size of the apron will depend on annual rainfall in the area. The aprons should be placed to allow larger animals access to the water. Leave a maximum of 2" between aprons. The slope of the aprons will be 5%, toward the cistern opening. 0.25" mesh galvanized hardware cloth can be installed between the apron frames, under the sheet metal to catch debris.

• Fasteners used to build the wood frames for the aprons will be #8 by 3" galvanized flathead screws. A minimum of 2 are required at each connecting joint. One 5 1/2"x 1/2" carriage bolt or 3/8" x 4" lag screw will be used to anchor the apron frames to the posts. 1" long sheet metal roofing screws will be used to attach the sheet metal to the apron frames.

MAINTENANCE

Annual checks of the cistern should be done. All debris should be removed, including algae. Vegetation around the opening of the ramp should be cut back so that the ramp opening is not obscured.

SAFE (Palouse) Project

Definition and Purpose

The SAFE (Palouse) project is authorized in Whitman County. See WA Exhibit 33 for eligible areas to enroll land under SAFE (Palouse).

Approved practices for the SAFE (Palouse) project are listed below. In implementing these practices, follow the guidance in the WA supplements to national Exhibit 9 for the CP38 practices and the materials in this exhibit.

SAFE (PALOUSE) PROJECT (Continued)

Seedbed Preparation and Seeding

The establishment of native grass, forb, and shrub vegetation in cropland will require multiple year plantings. Native vegetation takes several growing seasons to establish, with the potential of invasion by non-native weedy species, making staged plantings much more successful. Site preparation, timing of the seedings, and stand maintenance are very critical to achieve a successful Palouse Prairie stand. The following technical practice requirements are requested for the Palouse Prairie SAFE to enable landowners to successfully develop Palouse Prairie.

Site Preparation: A very clean field is needed before planting native species. Chemical fallowing should be an allowable option for year 1 of the CRP contract. A fallow season prior to CRP planting improves weed control (and volunteer wheat) and soil moisture for improved stand establishment.

Example: If the offered field is coming out of crop year, the fallow season could be year 1 of CRP contract. If offer is coming out of a fallow year, CRP must be planted according to the plan in year 1 of the contract.

Staged Plantings: Native vegetation is slow to establish. Establishing grasses first, followed by forb and shrub planting in following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat.

- First two growing seasons plant and establish grass species and control broadleaf weeds. Temporary suppression of competition from existing vegetation will be done prior to inter-seeding or inter-planting native forbs and shrubs in the subsequent year(s).

- Contracts must be seeded within 36 months of the contract effective date, as called for in paragraph 237.

Island Plantings: After grass is established a favorable option will be to plant forbs and/or shrubs in islands within field in suitable sites instead of throughout entire field. Plantings will be completed by interseeding seed and/or hand planting container plug stock.

- Native forbs and shrubs are often expensive and a seed or seedling source is not always available. Planting in islands around field will allow for future dispersal of species throughout field.

- Planting container plug stock can lead to better survival and establishment and thus may be more cost-effective than inter-seeding seed within restoration project sites in some cases. Prior to planting containerized native planting stock, existing vegetation will be temporarily suppressed to improve success of establishment.
Stand Mid-Management Practices: It is very important over the contract period to allow and complete mid-management practices as scheduled and required. Multiple management entries, beyond typical nonSAFE mid-management activities, may be scheduled in the conservation plan to improve native vegetation establishment success.

- Preferred mid-management practices: Rotary clipping, clip and remove residue, controlled burning, light disk and inter-seeding, and multiple herbicide and mechanical weed treatments.

- Implementation must be accomplished with 2-CRP provisions.

Forb Strips: Allow forbs to be planted in strips instead of entire field. This will aid in weed control and reduce the establishment cost for these species.

- Plant native forbs in stand after grasses are established; strips should be a minimum of 72 feet.

- A minimum of 10% and maximum of 20% of the contract acreage must be planted in forb strips.

- Use spot control to manage weeds in forb strips to reduce loss of desired native vegetation.

Note: Also see WA Exhibit 4, page 1.1.

SAFE (SHRUB-STEPPE) PROJECT

Definition and Purpose

The SAFE (Shrub-Steppe) project is authorized in Adams, Grant, Lincoln and Okanogan counties. See WA Exhibit 33 for eligible areas to enroll land under SAFE (Shrub-Steppe).

Approved practices for the SAFE (Shrub-Steppe) project are listed below. In implementing these practices, follow the guidance in the WA supplements to national Exhibit 9 for the CP38 practices and the materials in this exhibit.

</tbody>
</table>

Seedbed Preparation and Seeding

**Site Preparation:** A very clean field is needed before planting native species. Chemical fallowing should be an allowable option for year 1 of the CRP contract. A fallow season prior to CRP planting improves weed control (and volunteer winter wheat control) and soil moisture for improved stand establishment.

**Example:** If the offered field is coming out of crop year, the fallow season could be year 1 of CRP contract. If offer is coming out of a fallow year, CRP must be planted according to the plan in year 1 of the contract.
SAFE (SHRUB-STEPPE) PROJECT (Continued)

Dual (2-Year) Seeding: Grass and sagebrush seed (seed only, no plugs allowed) will be planted in the fall into a fallowed and packed seed bed free of weed growth. Forbs will be inter-seeded the following fall at the earliest. This will allow broadleaf herbicide treatment in the first spring following the fall seeding of the grass and sagebrush. It is critical that broadleaf herbicide be applied in the spring before sagebrush germination (approximately April 15 depending on conditions). Proper timing will allow field-wide treatment of winter annual weeds without damage to sagebrush seedlings.

Contracts must be seeded within 36 months of the contract effective date, as called for in paragraph 237.

Stand Mid-Management Practices: It is very important over the contract period to allow and complete mid-management practices as scheduled and required. Multiple management entries, beyond typical non-SAFE mid-management activities, may be scheduled in the conservation plan to improve native vegetation establishment success.

- Preferred mid-management practices: Rotary clipping, clip and remove residue, controlled burning, light disking and inter-seeding, and multiple herbicide and mechanical weed treatments.

- Implementation must be accomplished with 2-CRP provisions.

</tr>
</tbody>
</table>

**Seedbed Preparation and Seeding**

The recommended technical practice requirements are based on successful methods developed over the years that have proven to provide successful habitat establishment.

The establishment of grasses, forbs, shrubs and trees in cropland will require multiple year plantings. Native vegetation takes several growing seasons to establish, with the potential of invasion by non-native weedy species, making staged plantings more successful. Site preparation, timing of the seedings, and stand maintenance are very critical to achieve a successful shrub-steppe stand. The following technical practice requirements are requested for the CBIP SAFE to enable landowners to successfully develop habitat.
SAFE (Columbia Basin) Project

Site Preparation: A very clean field is needed before planting native species. Chemical fallowing should be an allowable option for year 1 of the CRP contract. A fallow season prior to CRP planting improves weed control (and volunteer wheat) and soil moisture for improved stand establishment.

Staged Plantings: Native grass in arid environments is slow to establish. Establishing grasses first, followed by forb and shrub planting in following growing seasons after broadleaf weed control has been achieved allows for higher quality habitat.

- First two growing seasons plant and establish grass species and control broadleaf weeds, third season inter-seed and/or plant native forbs and shrubs.
- Contracts must be seeded within 36 months of the contract effective date, as called for in paragraph 237.

Forb Strips: Where interseeding throughout entire site will not work due to competition from established grass, allow forbs to be planted in strips instead of entire field. This will aid in weed control and reduce the establishment cost for these species.

- Till areas for forb plots to create seed bed in area after grasses are established.
- Strips should be a minimum of 8 feet wide.
- A minimum of 10% and maximum of 20% of the contract acreage must be planted in forb strips.
- Use spot control to manage weeds in forb strips to reduce loss of desired native vegetation.

Stand Mid-Management Practices: It is very important over the contract period to allow and complete mid-management practices as scheduled and required. Multiple management entries, beyond typical non-SAFE mid-management activities, may be scheduled in the conservation plan to improve native vegetation establishment success.

- Preferred mid-management practices: Rotary clipping, clip and remove residue, controlled burning, light disking and inter-seeding, and multiple herbicide and mechanical weed treatments.
- Implementation must be accomplished with 2-CRP provisions.

Optional Irrigated Shrub and Conifer Plantings: Willing operators will be allowed to voluntarily establish shrub and conifer plots with FSA costshare only for plant materials and not for irrigation equipment or supplies. Operators will agree to maintain irrigated shrubs/trees as part of their CRP contract.

SAFE (Sage Grouse and Sharp-tailed Grouse) PROJECT

Definition and Purpose

The SAFE (Sage Grouse and Sharp-tailed Grouse) project is authorized in Douglas County. See WA Exhibit 33 for eligible areas to enroll land under SAFE (Sage Grouse and Sharp-tailed Grouse).

Approved practices for the SAFE (Sage Grouse and Sharp-tailed Grouse) project are listed below. In implementing these practices, follow the guidance in the WA supplements to national Exhibit 9 for the CP38 practices and the materials in this exhibit.

</tbody>
</table>

Seedbed Preparation and Seeding

Site Preparation: A very clean field is needed before planting native species. Chemical fallowing should be an allowable option for year 1 of the CRP contract. A fallow season prior to CRP planting improves weed control (and volunteer winter wheat control) and soil moisture for improved stand establishment.

Example: If the offered field is coming out of crop year, the fallow season could be year 1 of CRP contract. If offer is coming out of a fallow year, CRP must be planted according to the plan in year 1 of the contract.
SAFE (Sage Grouse and Sharp-tailed Grouse) PROJECT (Continued)

**Dual (2-Year) Seeding:** Grass and sagebrush seed (seed only, no plugs allowed) will be planted in the fall into a fallowed and packed seed bed free of weed growth. Forbs will be inter-seeded in the fall of the following one or two years. This will allow broadleaf herbicide treatment in the first spring following the fall seeding of the grass and sagebrush. It is critical that broadleaf herbicide be applied in the spring before sagebrush germination (approximately April 15 depending on conditions). Proper timing will allow field-wide treatment of winter annual weeds without damage to sagebrush seedlings.

Contracts must be seeded within 36 months of the contract effective date, as called for in paragraph 426.

**Stand Mid-Management Practices:** It is very important over the contract period to allow and complete mid-management practices as scheduled and required. Multiple management entries, beyond typical non-SAFE mid-management activities, may be scheduled in the conservation plan to improve native vegetation establishment success.

Preferred mid-management practices: Rotary clipping, clip and remove residue, controlled burning, light disking and inter-seeding, and multiple herbicide and mechanical weed treatments.

Implementation must be accomplished in accordance with 2-CRP provisions.

Mid-Contract Management Practices

1 Overview

A General Provisions

All CRP contracts enrolled starting in May 2003 (signup 26) must include required management practices. Producers with contracts approved before May 2003 may request to have them added to their contracts. The management practices:

- are intended to maintain or enhance stand vigor and diversity, and thus sustain wildlife, erosion and water and air quality benefits
- will be scheduled mid-term in the contract, typically years 4-7
- may be scheduled more than once during the contract period
- should be scheduled outside the April 1- July 1 primary nesting season.

Exception: Burning shall not occur April 1-August 15

- will qualify for cost sharing equal to 50 percent of the eligible cost of the operation
- are subject to the cost share limits in paragraph 512
- will be included in the contract’s conservation plan, and failure to carry them out in a timely and effective manner will be considered a contract violation unless waived by the COC
- may be waived or postponed in the year scheduled if the COC determines they are not needed
- shall not be postponed to, or approved for, the last 2 years of the contract period.

B Applicable CP Practices

Appropriate management practices shall be included in the conservation plan for all practices except CP12, Wildlife Food Plots.

2 Timing

A When Mid-Contract Management Should Occur

Paragraphs 428 and 512 of this handbook provide policy on mid-contract management activities. The procedure indicates that mid-contract management activities should be conducted no later than year 6 for a 10-year contract or year 9 or a 15-year contract. However when circumstances warrant it, it may be conducted as late as year 8 of a 10-year contract or year 13 of a 15-year contract.

As indicated in the descriptions below, management activities may not be conducted during the April 1 – July 1 primary nesting season unless spot treatment provisions apply.
Mid-Contract Management Practices

2 Timing (Continued)

B Activities During the Primary Nesting Season

The primary nesting season in Washington is April 1 through July 1. The CRP contract generally prohibits activity on established CRP stands during this period. The management practices contained in this exhibit normally may not be conducted during the primary nesting season. Requests to conduct a management practice during the nesting season will only be authorized if they are determined to be the best method and time to improve the stand and all reasonable efforts are made to select a method that results in the least wildlife disruption. Treatment during the nesting season can only be authorized in accordance the spot treatment policies provided in subparagraph 427 A. Prior approval must be obtained from the COC or designee before treatment begins.

Exception: Burning of established CRP stands is prohibited April 1 – August 15. Burning during this period can only be authorized with concurrence from the Washington Department of Fish and Wildlife (WDFW).

3 Approval

A Approval of Mid-Contract Management Activities

Mid-contract management activity is generally included in conservation plans as a generic reference that does not specify the activity or timing. Operators must obtain FSA approval of a specific activity, timing of the activity, and cost sharing for the activity, prior to implementation. However, COCs may approve the activity and/or cost sharing after implementation provided:

- mid-contract management activities are provided for in the conservation plan
- there is a reasonable assurance that the activity was needed and feasible for the stand
- a field visit is conducted, if determined necessary
- the activity is conducted outside the primary nesting season or during the primary nesting season with a spot treatment approval issued by FSA prior to implementation.
Mid-Contract Management Practices

3 Approval (Continued)

B Waivers of the Requirement to Conduct Mid-Contract Management Activities

In accordance with 2-CRP, mid-contract management activities are required. Waivers of the requirement to conduct these activities should only be granted when the COC determines:

- stand diversity meets the intent of the practice
- threats to the stand from noxious weeds and non-noxious weeds are minimal
- wildlife benefits do not need enhancement
- stand vigor to protect soil, water and wildlife resources is adequate.

Waivers of the requirement to conduct mid-contract management activities can be approved if all these requirements are met. Other issues the COC should consider include:

- Whether the participant has **conducted a field visit** of the contract acreage.
- The age of the stand. Wildlife biologists have reported that a cover that is more than 10 years old will generally provide enhanced benefits following a mid-contract management activity if one has not already been implemented.
- The results of even simple maintenance activities, such as mowing, during the REX process showed that significant stand improvements could be obtained.

COCs should bear in mind that the most common complaint from the general public and agricultural producers is the lack of maintenance activities on CRP. Waivers should only be granted where the COC is assured the stand meets the purpose of the practice, and weed pressure is minimal.

4 Annual Activity

A Producer Notification

*--Annually, by April 30, County Offices shall notify operators whose contracts are in their sixth year of a 10 year contract or eighth year of a 15 year contract that they must:*--*

- report if they have already performed a mid-contract management activity on the acreage
- perform an approved management activity that year
- report to the COC why they believe such an activity is not required in 2010.
Mid-Contract Management Practices

4 Annual Activity (Continued)

B Producer Letter

County Offices shall utilize the letter on page 10 of this exhibit to notify producers of the requirement to perform mid-contract management or request a postponement or waiver. Local modifications may be made to the letter as deemed appropriate, provided the requirement to conduct mid-contract management is communicated.

5 Approved Management Practices

A Fertilizing

Use on stands that are thinning or where the perennial grass species still dominate the stand (compared to annual grasses and broadleaf weeds) but appear to be declining in vigor. No more than 30 pounds of nitrogen per acre will be allowed and no more than twice during the life of the CRP contract. In areas with 14 inches or less of annual precipitation, nitrogen should only be fall applied. In areas with more than 14 inches of annual precipitation, nitrogen application could occur in fall or spring, with spring application likely achieving more desirable results.

B Mowing

Use on stands with excess residue and without shrub species. On stands with shrubs, mowing may be used only in areas without the presence of shrubs. If shrubs are destroyed by mowing, participants may be required to replant without cost sharing. Mowing should generally be done after grasses have gone to seed and shall not be conducted during the April 1 – July 1 primary nesting season unless approved in advance as a spot treatment. Do not mow later than October 15 to allow for fall growth to provide winter and spring cover for wildlife.

The mower height shall be high enough (generally 3” to 4” inches) to provide protection to the plant crowns while still providing exposure to sunlight. The primary purpose of rotary mowing is to break residue into small pieces allowing it to come in contact with the soil, speeding deterioration, and allow sunlight to the crowns of the desired perennials.
Mid-Contract Management Practices

5 Approved Management Practices (Continued)

B Mowing (Continued)

Mowing/swathing with residue removal may be approved if the amount of residue would damage the stand if left in place. Removal may be by baling or other means. To provide wildlife benefits, one large round or square bale or 1,000 pounds of stacked small bales may be left. If bales are left, they must be removed to the edge of the CRP or to non-cropland areas within the CRP to prevent damage to the cover. They must also be destroyed (for example, strings cut and removed) to prevent later commercial use. Any bales not left for wildlife must be removed from the CRP acreage shortly after baling to prevent damage to the cover. The removed material must be destroyed; no commercial use may be made of the residue. A paid for measurement service must be obtained by the producer to allow FSA to witness destruction of the material removed.

Note: Also see Managed Haying and Routine Grazing in paragraph 6.

C Harrowing – Spring Toot or Heavy Harrowing

Use on grass stands where there is excessive residue accumulation. The harrow is primarily to knock down excess residues exposing the grass crowns to sunlight and placing the residues in contact with the soil surface to speed deterioration. Harrowing shall not be conducted during the April 1 – July 1 primary nesting season unless approved in advance as a spot treatment.

D Light Chiseling

Use on stands where there is excessive residue accumulation, or stands are root bound. Chisels or field cultivators with points (do not use sweeps) may be used. Spacing of the shanks must be such that shrub roots and crowns are not severely disturbed (typically 24” to 30”). The points should penetrate the soil 3” to 5” to disturb the root system but not uproot the plants. The speed of travel should be such that depth control is maintained and the desirable woody species are more likely to be pushed out of the way than uprooted. The primary purpose of chiseling/field cultivating is to breakup residue and get it down on the soil surface to increase the rate of breakdown and to disturb the root mass of the grasses to reinvigorate their growth. In determining if light chiseling/field cultivation should be utilized, consideration should be given to the likelihood that these activities may increase germination of weed seeds and create weed problems. Light chiseling shall not be conducted during the April 1 – July 1 primary nesting season unless approved in advance as a spot treatment.
Mid-Contract Management Practices

5 Approved Management Practices (Continued)

E Light Disking

Use on stands where there is excessive residue accumulation, or stands are root bound. Disks shall be set so that they do not turn over sod or excessively cut roots. The primary purpose of disking is to breakup residue and place it on the soil surface to increase the rate of breakdown and to slice the root mass of the grasses to reinvigorate its growth. Disking should not be utilized in areas with shrubs. In determining if light disking should be utilized, consideration should be given to the likelihood that these activities may increase germination of weed seeds and create weed problems. Light disking shall not be conducted during the April 1 – July 1 primary nesting season unless approved in advance as a spot treatment.

F Prescribed Burning

Use on stands with excess residue and without shrub species. On stands with shrubs or wildlife water guzzlers, burning may be used only in areas without the presence of shrubs or guzzlers, and only if a fire line or other means can be utilized to protect these items from fire. If shrubs or guzzlers are destroyed by burning, participants may be required to replace them without cost sharing. Participants must obtain a burning permit and conduct the burn in accordance with the permit provisions, all applicable Washington Department of Ecology regulations, and the provisions of Agricultural Burning Task Force’s Non-Cereal Crop Best Management Practices Guidance. WA Exhibit 7 must be followed closely.

Due to increased concerns about the impact of burning on human health, and other safety concerns, burning should only be utilized if no other management technique is practical.

Note: Burning of established CRP stands is prohibited April 1 – August 15. Burning during this period can only be authorized with concurrence from the Washington Department of Fish and Wildlife (WDFW), and in accordance with spot treatment provisions in subparagraph 427 A.

Important: Materials in WA Exhibit 7 must be provided to participants wishing to burn CRP, and the participant must complete the CRP Burning Producer Certification Form.

*--County Offices shall not allow producers to burn CRP in the last year of the contract unless the burning occurs after the dates authorized in paragraph 637; July 1 or May 1 for fall-seeded crops.--*
Mid-Contract Management Practices

5 Approved Management Practices (Continued)

G Herbicide Application

Use on stands where competition from weeds is threatening the survival of seeded species. Herbicides must be applied in accordance with the label directions. Check state and local regulations and consult with the Cooperative Extension Specialist or a licensed pesticide consultant to be sure the intended use is registered. Consideration must be given to avoid the destruction of shrubs, legumes and forbs in the mix. If shrubs, legumes or forbs are destroyed by herbicides, participants may be required to replant without cost sharing.

Note: According to Washington State law, specific kinds and rates of chemical pesticides can only be recommended by a licensed consultant.

Because some CRP contract rental rates include maintenance rate ($2-$5/acre/year), cost sharing for herbicides as a management practice will only be authorized:

• if the FSA County Committee determines the participant has not failed to meet their contract obligation to control weeds
• weed control is necessary to maintain stand vigor and diversity
• on those herbicide and application costs in excess of the per acre maintenance rate for the acres treated.

Example: Contract 100 earns a $4/acre maintenance rate. The producer’s cost for herbicide treatment is $10/acre. Cost sharing will be limited to 50% of $6/acre ($10-$4).

H Interseeding

Use on stands where one or more species has become depleted or overall stand density is no longer adequate. Disturbance of the existing cover, such as by mowing or light tillage, may be necessary to achieve good soil/seed contact. Interseeding should be done in the fall after soil temperatures drop below 40° Fahrenheit. Species to be interseeded and seeding rates will be based on recommendations from NRCS or TSP. Given the limited success of interseedings in prior years, especially in low rainfall areas, use of this practice should be minimal. Interseeding and any required cover disturbance shall not be done April 1 – July 1.
Mid-Contract Management Practices

5 Approved Management Practices (Continued)

I Reseeding

Use on stands that have been depleted to the extent that they no long have the stand density to provide wildlife habitat, erosion control and water and air quality benefits. Seedbed preparation, seeding mixes and seeding rates will generally be the same as the original conservation plan but may be revised if recommended by NRCS or TSP.

Reseeding may be done on just the affected acres or strips or blocks that are at least as wide or wider than the available tillage and planting equipment. This is not interseeding using equipment that scalps a narrow area and then plants a single row into the scalped area. The seedbed should be prepared as it would be for a new seeding with a firm, weed free seedbed. On sloping fields this practice should be applied cross-slope or on contour. Other management practices may be used on the strips that are not tilled. Reseeding and any seedbed preparation shall not be done April 1 to July 1.

J Riparian Buffer Practices

The following activities may be conducted as mid-contract management activities on riparian buffer practices:

- blackberry control
- “beaver cage” tree protectors
- thinning.

These activities must be conducted outside the April 1 – July 1 primary nesting season.

K Other

Other locally recognized practices or a combination of practices may be used to maintain or improve stand vigor and diversity, or otherwise enhance habitat. The use of any method not listed in this document must be approved by the Washington State FSA Committee before they are included in a conservation plan and utilized.
Mid-Contract Management Practices

6 Other Activities

A Managed Haying and Routine Grazing

Managed haying and routine grazing are not “management practices” for the purposes of CRP. Cost sharing will not be provided for these activities. However, managed haying and routine grazing are authorized as outlined in Part 19 and WA Exhibit 6 of this handbook. While these are not management practices as such, they still could have the effect of maintaining the vigor and diversity of the CRP cover and reduce or eliminate the need for the authorized management practices listed above.

Note: See WA Exhibit 6 for STC policy on managed haying and routine grazing.

B Emergency Haying and Grazing

Emergency haying and grazing is only allowed under severe drought conditions and only when approved in advance by the Deputy Administrator or STC. See Part 19 of this handbook. Like managed haying and routine grazing, emergency haying and grazing are not authorized management practices, but could have the effect of maintaining the vigor and diversity of the CRP cover and reduce or eliminate the need for the authorized management practices listed above.
Mid-Contract Management Practices
Suggested Letter to Operators of CRP Concerning Mid-Contract Management Requirements

RE: Your Conservation Reserve Program (CRP) Contract: _____________ Acres: _____________

Dear Producer:
The contract appendix and conservation plan for the contract(s) referenced above include a requirement that you conduct at least one mid-contract management activity in the mid to later years of the contract. The intent of mid-contract management is to enhance the vigor and diversity of the stand, reduce weed pressure and improve wildlife habitat. FSA will provide 50% cost sharing on approved mid-contract management activities. Since your contract is in the mid to later years of the contract period, a mid-contract management activity is required unless waived by the FSA County Committee.

Mid-contract management activities that may be approved include mowing, herbicide application, light tillage, fertilizer application, interseeding, reseeding, seeding of blocks or strips of forbs and legumes, or other activities approved by the County Committee. These activities may only be required on a portion of the contract acreage, or the entire contract. If the entire contract is to be treated, this must be done outside of the established primary nesting season. If only a portion of the acreage will be treated, the County Committee may be able to approve it during the primary nesting season.

You need to take the following steps at this time.

1. Contact the (county name) County FSA Office to review your mid-contract management options.
2. Conduct a field inspection of the contract acreage.
3. Work with our office to determine which activity is best for your contract, the acreage to be treated, and obtain approval of the activity and cost sharing payments.

Waivers of the mid-contract management may be granted by the County Committee on a case by case basis. If you think your stand meets the criteria that are the intent of mid-contract management as described above, you may request a waiver. Among the issues that will be considered by the Committee are:

1. the stand diversity meets the intent of the practice
2. threats to the stand from noxious weeds and non-noxious weeds are minimal
3. wildlife benefits do not need enhancement
4. stand vigor to protect soil and water resources is adequate
5. when you conducted a field visit of the contract acreage
6. the age of the stand.

Failure to conduct mid-contract management activities or obtain a waiver can result in a contract violation and potentially, payment reductions. We encourage you to contact our office so we can work together to determine which management activities are best suited for your CRP stand. You will receive financial assistance for these activities and ensure the stand provides the environmental benefits that have produced the public support that continues to fund this program.

Sincerely,
CED

5-18-11
CRP Managed Harvesting/Haying and Routine Grazing

Applicability

All approvals of managed harvesting/haying and routine/grazing on or after June 16, 2010 and the issuance of National CRP-664 and WA Notice CRP-91 are subject to the provisions of this exhibit. Producers approved for managed haying and grazing prior to that date may ask to have their conservation plans modified to comply with the provisions of this exhibit.

Managed harvesting/haying and routine grazing are only permitted on acreage devoted to CP1, CP2, CP4B, CP4D, CP10, CP18B and CP18C. Haying or grazing are not permitted on CP38 SAFE acreage in Washington.

See Part 19, Sections 1 and 4 of this handbook.

1 STC Policy

A Consideration

The primary purpose of managed haying/harvesting and grazing is to invigorate CRP stands by removing old vegetative growth and stimulating new growth. The intent is not provide CRP participants an economic advantage over non-participants. Consideration is also given to limit impacts during the primary nesting and brood rearing season. The provisions listed year comply with the Environmental Assessment completed for CRP haying and grazing on CRP land in Washington.

B CRP Primary Nesting Season

The CRP primary nesting season is April 1 to July 1. CRP managed harvesting/haying and routine grazing is not permitted during this period.

C Frequency and Extent

*--CRP acreage subject to these provisions may not be hayed or grazed more than once every four (4) years. Stocking rates for grazing must be approved by NRCS.--*
CRP Managed Harvesting/Haying and Routine Grazing

1 STC Policy, Continued

D Time Periods

Harvesting/Haying

Managed harvesting/haying can begin on July 2. All hay must be removed by September 30.

Grazing

COC’s may authorize one of the following grazing periods. COC’s may approve different grazing periods for different areas of the county. Each area can only be approved for one grazing period. If different periods are authorized for different areas, the boundary must be such that it can be easily and clearly communicated to participants, and be approved in advance by the State Office. See page 4 for currently approved periods.

- July 2 – October 29
- October 1 – November 30 and January 1 – March 1
- November 1 – February 28

E Payment Reductions

A 25 percent payment reduction will be assessed for the FY when the approved period begins.

F National Policy

CRP participants wishing to utilize managed harvesting/haying and grazing must comply with the procedure in Part 19, Sections 1 and 4 respectively of this handbook. This includes:

- eligible practices (CP1, CP2, CP4B, CP4D, CP10, CP18C and CP18D)
- a 25 percent payment reduction on the acres actually hayed or grazed
- the need to complete the following before haying or grazing begins:
  - obtain a modified conservation plan unless already incorporated in the existing plan
  - sign a written request
  - receive a written authorization
  - not hay or graze land within 120 feet of a stream or other water body
  - not hay and graze the same acreage in the same approved period
  - managed harvesting/haying or routine grazing may not begin until 12 months after the cover is fully established.
CRP Managed Harvesting/Haying and Routine Grazing

1  STC Policy, Continued

G  Important Restrictions

NRCS has developed guidance materials for developing modified conservation plans that include:

- stocking rates will depend on the site
- grazing must cease the **earlier of** (1) 20% of the approved acreage in the contract is grazed to a stubble height (above the crown) of 2 inches or less, (2) 80% of the approved acreage is grazed to a height (above the crown) of 6 inches or less, or (3) the approved grazing period ends
- wildlife watering “guzzlers” and at least one acre surrounding the guzzler must be fenced to prevent livestock access
- areas planted to trees or shrubs other than sagebrush and rabbitbrush must be fenced to protect the trees or shrubs
- ***
- stocking rates for grazing must be approved by NRCS.
CRP Managed Harvesting/Haying and Routine Grazing

1 STC Policy, Continued

H Approved Periods

The following managed grazing periods have been approved for 2006 and later years.

I NRCS Guidance

The guidance on pages 5 and 6 was developed by NRCS for modifying a conservation plan to address managed haying and grazing. Some modifications have been made to comply with current policy. Sample plans are provided on pages 7 and 8.
CRP Managed Harvesting/Haying and Routine Grazing

This guidance was originally issued in Washington Bulletin No. WA300-4-24.

The Farm Service Agency (FSA) allows managed haying and grazing on Conservation Reserve Program (CRP) acreage in Washington State. NRCS assists CRP participants who wish to hay or graze CRP stands by developing general purpose haying and grazing plans. In order to be eligible the CRP stand must be certified. Uncertified CRP stands are not eligible unless NRCS and FSA determine that the proposed action will not be detrimental to the stand.

For more specifics on managed haying and grazing, refer to Part 19, 2-CRP (Rev. 5).

Procedures for NRCS handling of request for haying and grazing, when requested by FSA:

I. NRCS will modify the CRP plan to include haying or grazing for the acreage designated as eligible on an aerial photo by FSA.

   A. The CRP plan will be modified using the attached modification templates which include:
      1. Conservation Cover (327) scheduled for O&M.
      2. Prescribed Grazing (528) for fields which are grazed.
      3. Forage Harvest Management (511) for acreages that are hayed
      4. Use Exclusion (472)
         • When grazing CRP land where wildlife watering facilities have been installed the wildlife watering facility and at least 1 acre surrounding the watering facility must be fenced out.
         • When grazing acreages where trees and shrubs (other than sagebrush and rabbitbrush) have been established, the area planted must be fenced to protect the trees and shrubs.
      5. Any additional practices needed to protect against ephemeral gully erosion, maintain water quality, or provide habitat and cover for wildlife.

   B. The following criteria are used for 528 and potential carrying capacity estimates.
      1. 9-inch precipitation zones – 4 acres per AUM. If a site visit documents sufficient usable forage, 3 acres per AUM may be used.
      2. >9 inches precipitation – 2 acres per AUM unless a site visit documents significantly greater usable forage.

   C. The modification will provide for a specified grazing season length based on the producer’s desired stocking rate and the above estimates for potential carrying capacity.
CRP Managed Harvesting/Haying and Routine Grazing

D. The modification provided to the producer will state: The grazing season will end at the earlier of (1) 20% of the approved acreage is grazed to a stubble height (above the crown) of 2 inches or less, or (2) 80% of the approved acreage is grazed to a height (above the crown) of 6 inches or less. You are required to monitor the grazing and ensure this criterion is met. This criterion applies no matter what estimated stocking rate was initially determined or the grazing season remaining.”

IV. Animal Unit Equivalents will be calculated using the factors in the following table. The calculation is based on the average weight of the animals entering the field. Calves older that 5 months will be placed in the appropriate weight class.

<table>
<thead>

</tr>
</tbody>
</table>

Important: Stocking rates must be approved by NRCS. Haying shall be limited to 50 percent of each field or contiguous fields.

The modification templates on pages 7-8 will be completed and provided to the producers. These templates will serve as modifications to the CRP contract unless there provisions have already been incorporated in the plan. Questions about their use should be referred to your Area Resource Conservationist.
MODIFICATION OF CRP PLAN FOR MANAGED HARVESTING/HAYING

Haying of your Conservation Reserve Program (CRP) contract acres has been approved. The intent of managed haying is to enhance the CRP stand vigor and diversity. **Haying season will begin no sooner than July 2. All hay must be removed by September 30.** The acres that may be considered for this practice must have a stand where the plants are established to the extent that they will survive the proposed haying as determined by NRCS and FSA County Committee.

Managed haying and routine grazing are not allowed on any acreage hayed or grazed in the current year and/or previous 3 years.

**Conservation Cover (327)** - You are responsible to ensure the haying activity will not harm the established cover. If any of the cover is destroyed by the haying activity, it must be re-established at the producer’s expense.

**Tree and Shrub Establishment (612)** – If haying fields where trees and shrubs have been established, you are responsible to ensure that the haying activity will not destroy or harm the trees or shrubs.

**Forage Harvest Management (511)** Haying will be limited to one cutting annually.

Contract No. ___________ Tract Number ___________ Field numbers ______________________

Producer’s signature indicates the understanding of the above modification of the CRP conservation plan.

Producer Date Producer Date

Producer Date Producer Date

Natural Resources Conservation Service Date

Farm Service Agency Date
MODIFICATION OF CRP PLAN FOR ROUTINE GRAZING

Grazing of your Conservation Reserve Program (CRP) contract acres has been approved. The intent of managed grazing is to enhance the CRP stand vigor and diversity. Grazing is limited to the period _________________ to _______________. The acres that may be considered for this practice must have a stand where the plants are established to the extent that they will survive the proposed grazing use as determined by NRCS and FSA.

Managed grazing on a fully certified acreage is authorized 1 out of every 4 years. Haying and grazing are not allowed on any acreage hayed or grazed during the current year and/or in the previous 3 years.

The approved stocking rate for your request is _____Acres Per AUM as determined by NRCS.

Conservation Cover (327) - You are responsible to ensure the grazing activity will not harm the established cover. If any of the cover is destroyed as a result of the grazing activity, it must be re-established at the producer’s expense.

Prescribed Grazing (528) – The grazing season will end at the earlier of (1) 20% of the acreage identified below is grazed to a stubble height (above the crown) of 2 inches or less, or (2) 80% of the acreage identified below is grazed to a height (above the crown) of 6 inches or less. You are required to monitor the grazing and ensure this criterion is met. This criterion applies no matter what estimated stocking rate was initially determined or the grazing season remaining.

Livestock Water – If new livestock watering facilities are needed for grazing, they should not be placed on CRP acreage if possible. If any of the cover is destroyed in the livestock watering area, it must be re-established at the producer’s expense.

Use Exclusion (472)
- If grazing acreages where trees and shrubs (other than sagebrush or rabbit brush) have been established, the area planted must be fenced to protect the trees and shrubs.
- If grazing acreages with a livestock watering facility, at minimum, 1 acre of land must be fenced to protect the guzzler.

CRP Burning

Producer Certification Form

In order to burn CRP, producers must complete the form on page 2 of this exhibit, obtain a burning permit from an authorized permitting authority and comply with the permit and all Washington Department of Ecology burning regulations and procedures.

When producers request approval to burn CRP, County Offices shall:

- Provide the producer a copy of the Non-Cereal Crop Best Management Practice Guidance document provided in pages 3-10 of this exhibit. This document was developed by the Washington Department of Ecology and the Agricultural Burning Practices and Research Task Force to provide guidance on burning non-cereal crops such as CRP.
- Review the Producer Certification Form in page 2 of this exhibit with the producer.
- Have the producer and CED sign the Producer Certification Form.
- Provide the producer with the signed form, submit a copy to the State Office, Attention CRP Specialist, and place a copy in the producer’s contract file.

As noted in WA Exhibit 5, paragraph 4 F, burning should only be utilized as a CRP cover management tool when no other management tool is practical. Burning CRP for mid-contract management practices is prohibited April 1 through August 15.
CRP Burning

Producer Certification Form

CRP participants who wish to burn CRP fields either for stand enhancement (seeding) or mid-contract cover management practices must complete with following information.

County: ________________________________

Grower Name: ________________________________ Contract No.(s): ________________

Need:

☐ Residue Removal for CRP Enhancement (Seeding)

☐ Residue Load

☐ Rodent Infestation

☐ Weed Infestation

☐ Erosion Potential

☐ Terrain Characteristics

☐ Residue Removal on CRP (Mid-Contract Cover Management)

Method: _________________________ Season: _________________________ Acres: ________________

(Burn, mow/burn, etc.) (Spring, fall, etc.) (Projected)

Producer Certification:

I certify that I have considered the use of all reasonable non-burning alternatives to address my CRP enhancement and/or renovation needs.

I understand that it is my responsibility to:

• acquire and implement an acceptable burn permit and burn management plan
• comply with all applicable Washington Department of Ecology regulations
• review and follow the guidelines in the Agricultural Burning Practices and Research Task Force’s Non-Cereal Crop Best Management Practices Guidance (copy attached)
• comply with local, state, and federal air pollution and fire safety regulations and laws.

I also understand the CRP burning must occur before April 1 or after August 15.

Producer’s Signature ________________________________ Date ________________

Farm Service Agency Signature ________________________________ Date ________________
INTRODUCTION:
The purpose of this document is to identify the Best Management Practices (BMPs) for reducing emissions from non-cereal crop agricultural burning. The Agricultural Burning Practices and Research Task Force (Task Force) encourages the use of agronomically sound and economically feasible alternatives to burning that are consistent with resource conservation. The Task Force recognizes that any and all burning creates emissions having the potential of affecting public health and the environment. The Task Force also recognizes that after first considering all non-burning alternatives, there may be specific agronomic situations where burning is reasonably necessary to successfully carry out the enterprise.

DEFINITION of BMP:
A sequence of procedures that apply the best available science and technology in order to address the conservation of natural resources (Soil, Water, Air, Plants, Animals or SWAPA).

HOW TO USE BEST MANAGEMENT PRACTICE GUIDELINES:
The best management practices, or BMPs, are an important piece of the agricultural burning program. The clean air law requires farmers to explain why burning is necessary. This is where best management practices come in. A farmer can show burning is reasonably necessary to successfully carry out the enterprise when it meets the criteria of the BMPs and no practical alternative is reasonably available. While designed as guidance, these best management practices provide one way to explain why burning is reasonably necessary to carry out your enterprise.

Growers using these BMPs to demonstrate the need to burn should expect that applicable portions of this BMP guidance will be included in an approved agricultural burn permit.

Growers not using these BMPs to demonstrate the need to burn must, on an individual basis, establish that their proposed agricultural burn plan is reasonably necessary and that no practical alternative is available. The responsibility and burden of proof is on the grower and the demonstration must satisfy the Department of Ecology and the local delegated permitting authority. Growers should expect that appropriate parts of this demonstration will be included in an approved agricultural burning permit.
The following Best Management Practices guidance is made up of four parts. Part I provides
general requirements. Part II provides reasons for which farm burning is generally acceptable.
Part III lists recommended ways of burning to keep smoke to a minimum. Part IV is reserved
for locally developed BMPs.

Before getting started- Determine if you need an agricultural burning
permit.
♦ Burning acreage that is in agricultural production requires a permit.
♦ You do not need a permit to burn orchard prunings, natural vegetation along fencelines,
  irrigation and drainage ditches, or natural vegetation blown by the wind.

If you need a permit, follow these 5 steps when using these BMPs:

1. Read all of Part I. Note: You must consider: economically feasible alternatives to burning,
timing for burning, and habitat protection.

2. Find the Best Management Practice in Part II, Sections 1-8 that most closely matches your
situation. Note: Some sections contain both crop specific and general elements. Use the
crop specific portion as the first choice. If your crop is not identified, use the general
portions.

4. Fill in the REASON FOR BURNING section on the Agricultural Burning Application.
Include the BMP section number and required details. (Examples: REASON FOR
BURNING: 3a. control of Sclerotinia trifoliorum in alfalfa seed production  REASON FOR
BURNING: 5k. residue removal & removing apple orchard & replanting to hay  REASON
FOR BURNING: 7a. renovation of CRP ground suffering a stand failure & CRP
management team is (names)

5. If you don't find your situation described in Part II, provide a detailed explanation of why you
need to burn with your Agricultural Burning Application. When the extent or severity of the
situation falls outside the BMPs or when not utilizing these BMPs, the permitting authority
may require the farmer to have the need for burning verified by an appropriate professional.
PART I --- GENERAL BELIEF STATEMENTS:

The Washington Clean Air Act (Chapter 70.94 of the Revised Code of Washington) establishes specific measures for the control of air pollution, which are appropriate for each category of air pollution sources. The legislature recognized that air pollution controls may affect other environmental media and supports those strategies that lessen the negative environmental impact on all environmental media, including air, water, and land. The law also recognizes that agricultural burning is acceptable when it is reasonably necessary to successfully carry out the enterprise.¹

The 1991 Clean Air Act recognizes air quality as a value no less important than soil, water, animals, plants, and economics and that every action or activity has environmental effects and consequences, including burning. The Task Force recognizes the potential long term adverse impact that excessive burning can have on the environment. Economically feasible alternatives must be considered prior to burning. The development of agronomic and cultural practices and the use of new technology are strongly encouraged.

Agricultural burning has a role in existing and developing farm management systems when a balanced view of values (air, water, soil, plants, animals, economics) is considered. RCW 70.94 identifies best management practices (BMPs) for agricultural burning as those practices that are essential agronomically and which eliminate unnecessary burning. Because of the diversity of farming in Washington, appropriate BMP guidance is needed. This has resulted in "general ag burning" BMPs and crop specific BMPs. The farmer/grower must accept responsibility for characterizing the conditions on their farm which make it necessary to burn.

The nature of agricultural cropping systems in Washington is very diverse. A specific agronomic or cultural practice (including burning practices) may not work the same on all farms (i.e., one size does not fit all).

The Agricultural Burning Best Management Practices guidance is not intended to undo the requirements of fire protection agencies; of local air pollution control authorities; of other federal, state, or local governments; of other resource program requirements; residue requirements; etc.

The farmer must consider the protection of wildlife areas by timing of the burn or other appropriate measures. Generally, wildlife areas may include tree and shrub areas, riparian areas with trees and shrubs, woodlands, and "eyebrows" with dense tree and shrub cover.

A farmer can show burning is reasonably necessary to successfully carry out the enterprise¹ when it meets the criteria of the BMPs, and no practical alternative is reasonably available. When the extent or severity of the situation falls outside the BMPs or when not utilizing these BMPs, the permitting authority may require the farmer to have the need for burning verified by an agronomic professional.
PART II --- SPECIFIC BEST MANAGEMENT PRACTICES
Agricultural burning is generally acceptable when the situation meets one of the following criteria:

SECTION 1 -- FARM PLAN

1. Burning identified as part of a farm management plan that considers all elements of long-term impacts of that burning upon the soil and the total farm environment, and that burning is reasonably necessary to successfully carry out the enterprise in which the applicant is engaged, as prescribed by an accepted/acceptable agronomic professional.

SECTION 2 -- INSECT CONTROL

2. Burning identified for insect control (in affected acreage only) -- Insects/pests for which burning is the control used by or appropriate to farms of a similar nature in the local area. Describe your situation on the permit application including: insect/pest name, crop, local details, severity of problem, etc. Examples may include: saw fly, Russian fly, mites, thrips, grasshoppers (plague situations).

SECTION 3 -- DISEASE CONTROL

3a. Alfalfa Seed Production --- Agricultural burning in alfalfa seed production (seed for growing alfalfa, not sprouts) is generally acceptable when the situation meets one of the following criteria:

Field scale burning of alfalfa residue during late winter when alfalfa seed will be harvested (for seed, not sprouts) from the field the next season. (The Task Force has established that burning following harvest in the "tear out" year is not generally acceptable practice.) The burning of alfalfa seed fields provides a variety of agronomic benefits, but alfalfa seed farmers primarily burn their fields to control a fungal disease called *Sclerotinia trifoliorum*. This disease affects the alfalfa plant by attacking the alfalfa seed and is virtually uncontrollable by other (non-burning) methods.

A complicating factor in alfalfa seed production is that certain pesticides are used which make the residue uncertifiable as animal feed. (These particular pesticides are used because the alternative pesticides have detrimental effects on the alkali bees, which pollinate the alfalfa.) Because alfalfa seed production is a perennial crop operation, farmers do not plow under their fields every year. The residue left on the fields after harvesting the seed harbors the fungal disease and gets in the way of the next season's plant growth. To have a viable crop, the residue has to be removed. The residue could be baled and hauled away or raked up in some manner, but unfortunately the fungus also remains on the living part of the plant (that portion still in the ground). Burning is the only known way to deal with the specific fungus, and burning gets rid of the residue.
Note that the residue is necessary as the fuel for the burning and that without the residue, the field is too green to burn.

3b. Burning identified for disease control (in affected acreage only) -- Diseases for which burning is the control used by or appropriate to farms of a similar nature in the local area. Describe your situation on the permit application including: disease name, crop, local details, severity of problem, etc.

SECTION 4 -- WEED CONTROL

4a. Burning identified for weed control (in affected acreage only) -- Weeds for which burning is the control used by or appropriate to farms of a similar nature in the local area. Describe your situation on the permit application including: weed name, crop, local details, severity of problem, etc. Examples may include: cheat grass, jointed goat grass, diffuse knap weed, russian thistle, kochia, black grass, wind grass, wild oats, volunteer rye, quack grass, Canadian thistle, yellow star thistle.

4b. Burning of noxious weed infested areas in adjacent non-cropland that is not accessible with normal equipment. Describe your situation on the permit application including noxious weed name, crop, local details, severity of problem, etc.

SECTION 5 -- RESIDUE REMOVAL

5i. Burning to remove residue for the purposes of developing physiological conditions conducive to increased crop yield. Economics should not be a sole determining factor in documenting the need to burn. Growers are required to use any reasonable non-burning alternative, consistent with SWAPA, instead of burning. Non-burning alternatives are deemed to be reasonably available to a grower when they are successfully and customarily being used by others in circumstances similar to the grower’s situation. In cases where a non-burning alternative is reasonably available but not yet used by the grower, burning may be allowed only as part of a limited term transition to non-burning management systems.

Describe your situation on the permit application including: residue amounts, crop, field treatment, local details, etc.

5j. **Interim Revision to BMP 5j.-- adopted by ABTF on February 12, 2004** Conservation Reserve Program (CRP) – Burning of Conservation Reserve Program (CRP) stands for enhancement when residue load is excessive is acceptable when supported by a signed statement from the producer that reasonable non-burning alternatives were considered.
Note: Applications received without the signed grower’s statement will be considered incomplete.

5j.1 Conservation Reserve Program (CRP) --- Crested Wheatgrass – Agriculture burning is not generally recommended in crested wheatgrass CRP take-out with summer fallow.

5k. Orchard Removal --- Burning residue for the purposes of development of physiological conditions conducive to increased crop yield and/or disease control and under the provisions that the burning identified by the applicant is customary among or appropriate to farms of a similar nature in the local area. Burning of so called "heavy wood" resulting from orchard removal (when changing crops, varieties, or re-establishing the crop).

***Interim Addition to BMP 5k.-- adopted by ABTF on November 20, 2003 for use in counties under Ecology’s jurisdiction:

Orchard tear-out burning will be considered agricultural burning (including within Urban Growth Areas) in all cases except when the future use of the land is known to be non-agricultural. In cases where the future use of the land is unknown, burning under an agricultural burning permit from the Department of Ecology will be allowed. This interim BMP will be in effect until June 1, 2004.

Note: burning of orchard prunings does not require an agricultural burning permit (see page 1).

SECTION 6 – RESEARCH

6. Agricultural burning conducted as part of a research project or demonstration project provided the burning/research/demonstration is recognized by the agricultural community through College, University, Extension, Conservation District, or the Task Force as innovative or experimental and the results will be shared with the Task Force and the general public. Describe your situation on the permit application including: the research project, residue amounts, crop, field treatment, local details, etc.

SECTION 7 – RENOVATION

7a. ***Interim Revision to BMP 7a.-- adopted by ABTF on February 12, 2004 Conservation Reserve Program (CRP) --- Burning of Conservation Reserve Program (CRP) stands for enhancement is acceptable when one or more of the following conditions exists: (a) residue load (b) rodent infestation (c) weed infestation (d) erosion potential or (e) terrain characteristics; and supported by a signed statement from the producer that reasonable non-burning alternative were considered.

Note: Applications received without the signed grower’s statement will be considered incomplete.
7b. Periodically burning (every 4 years) for renovation of hayland, pasture, range, or grass cover as recommended by an appropriate technical professional. Describe your situation on the permit application including: crop or field condition, local details, name of technical professional, etc.

SECTION 8 -- SUFFICIENT TIME

8. Burning allowed in order to provide a reasonable time for the applicant to convert to non-burning practices or to allow the Task Force sufficient time to review the procedure for inclusion as a best management practice. The time allowance recommended by the Task Force is not longer than three (3) years. (This provision is being referred to as a "parachute" provision because it allows time for a "safe landing" in situations where burning is not otherwise approved). This does not preclude or waive the requirements outlined above or any other requirements. Describe your situation on the permit application including: crop or field condition, local details, name of technical professional (if any), how much time is needed to shift to alternative, etc.

PART III --- SPECIFIC BURNING PRACTICES:

SECTION A -- REDUCING EMISSIONS

A1. Large Piles --- The Task Force has established the following specific practice or practices in order to reduce emissions from burning large piles: Make very hot fires. Start and/or feed fires only during daylight hours. Allow fires to "ash over" during the evening and night. (Putting out and restarting the fire each evening and morning makes more smoke.)

A2. Other local specific practice or practices in order to reduce emissions from burning. Describe your situation on the permit application including: crop or field condition, local details, name of technical professional (if any), specific way of burning, etc.

SECTION B -- REDUCING IMPACTS

B1. Alfalfa Seed Production --- The Task Force has established the following specific practice or practices in order to reduce the impact of emissions from burning: Burning during the winter under wind conditions which quickly disperse the smoke. Burning during the winter reduces the concentration of smoke in the fall when burning of other crops occurs.
B2. The Task Force has established the following specific practice or practices in order to reduce the impact of emissions from burning\(^2\). Evening and nighttime burning of piles may be allowed if the typical offshore winds will promote better dispersion than would occur during daytime, onshore conditions.

B3. Other local specific practice or practices in order to reduce the impact of emissions from burning. Describe your situation on the permit application including: crop or field condition, local details, name of technical professional (if any), specific way of burning, etc.

B4. The Task Force has established the following specific practice or practices in order to reduce the impact of emissions from burning\(^2\). Burning may be allowed only on designated “burn days” and then only between the hours specified. In order to minimize adverse impacts, your burn must be completed (extinguished) before sunset. In no circumstance is a fire to be ignited less than 2 hours before sunset.

PART IV --- LOCALLY DEVELOPED BMPS

Local permitting authorities may develop BMPs to satisfy particular burning needs in their local, geographic areas. When approved by the Task Force, these BMPs will be made available as an addendum to this document. In the meantime, look closely at the general agriculture portions of Part II --- Specific BMPs (#s: 1, 2, 3b, 4a, 4b, 5i, 6, 8) to see if one might match the local situation. If you don't find your situation described in Part II, please see Step 5 on page 1.

\(^1\) This is the language used in the Washington State Clean Air Act (RCW 70.94.650). The Task Force interprets successfully carrying out the enterprise as meaning to be successful (profitable) in the business of farming.

\(^2\) … provided the burning is reasonably necessary to successfully carry out the enterprise and no practical alternative is reasonably available …

CRP Stand Certification Report

Because only a limited number of status reviews are completed on CRP stands, FSA must monitor stand establishment. The STC has authorized the use of the mailing contained in this exhibit to obtain information from producers about the status of their stand. COC’s may utilize these producer reports, along with other information available in the file, to prioritize workload and field visits, determine if additional stand enhancements are necessary, consider a stand established, etc.

The use of this mailing is not mandatory. If the COC determines the mailing would be helpful, minor revisions may be made to the document to fit local conditions. Significant changes must be submitted to the STO for review. An electronic version of the document may be obtained from the CRP Program Specialist.

Absent a final status review from TSP or NRCS, or the use of this exhibit, CRP stands should be considered fully established no later than the third growing season after planting.
CRP Stand Certification Report (Continued)

Dear CRP Participant,

CRP participation is contingent on having an “established” cover according to NRCS and FSA standards. Our records show that the cover has not been certified as established on the fields listed above. The FSA County Committee is requesting that all CRP participants with uncertified acreage submit a report on the status of that acreage. A field visit by you or your representative may be necessary to complete this questionnaire.

The deadline to submit this report is ______________________. The report can be submitted in conjunction with your annual acreage report.

The County Committee will consider your report and other information in the file to determine if your stand should be certified as established or if additional action will be required. A field visit by FSA may be conducted if appropriate.

Please remember that whether your cover is certified as established or not, you need to comply with all the terms of your contract including, but not limited to, cover establishment, maintenance and weed control.

On contract acreage with an established cover, 50 percent cost sharing may be available for mid-contract cover management practices. These practices allow you to maintain the vigor of your established stand and prevent stand thinning and weed encroachment. The type of practice and cost sharing may be incorporated in a revised conservation plan, which the County Committee must approve before work begins. Contact our office for more details.

Please review page 2 of this document. Then complete page 3, read the certification at the bottom, sign the page and return it to the address shown. Please feel free to contact our office if you have any questions.

Sincerely,

County Executive Director
CRP Stand Certification Report (Continued)

I believe the cover on the previously uncertified CRP fields should be considered certified as established because they meet the stand establishment criteria listed below.

Perennial Grasses/Legumes/Forbs

The CRP cover on these fields is adequate because it meets the following criteria:

- Both enhanced areas and unenhanced areas (from previous CRP contracts, if applicable) are healthy and vigorous.
- *--The contract acreage has, on average, a density of at least 0.8 perennial grass plants per square foot. --*
  There are no significant areas on the contract acreage where this density has not been met, and those areas failing to meet acceptable density do not account for more than 5% of the contract acreage. Areas failing to meet density are primarily associated with shallow or rocky soils, alkali or caliche, or other soil limitations which restrict perennial grass establishment.
- On acreage enhanced (seeded) under this contract, a seed mixture required for the contract’s environmental benefit index (EBI) score, or a substitute mix approved by the FSA County Committee, was seeded or reseeded, as verified by seed tags and invoices submitted to FSA. There is the presence of all species in the most recently approved seeding mix within the contract acreage.

Weeds

Weeds are adequately controlled on these fields because they meet the following criteria:

- Weed pressure on all fields is light or nonexistent.
- Fields do not have significant amounts of Russian thistle, mustards, or other tumble type weeds which could adversely affect adjoining land.
- Annual grasses including downy brome (cheat grass) are absent or present at low levels.
- The species making up the approved cover are predominant throughout the contract and are suppressing weeds and annual grass production.
- Noxious weeds (i.e., ____________________________) are absent, or if present, appropriate control measures are being applied annually to prevent seed set and further spread.

Shrubs/Trees

If applicable to this contract, shrub/tree plantings are adequate because they meet the following criteria:

- Original planting of approved species was completed in a manner approved by NRCS and had adequate survival, or
- In the event of required replantings, appropriate numbers, as determined by the FSA County Committee, have been replanted.
- Invoices for planting or replanting, as applicable, have been provided to FSA.

Wildlife Food Plots

If applicable to this contract, wildlife food plots are adequate because they meet one of the following:

- For annual plantings, the designated food plot has been planted and at least a portion (usually 50%) is replanted every year. Plant mixtures seeded to meet food plot requirements are consistent with NRCS food plot specifications for the area.
- For perennial plantings, a diverse mix of identified by NRCS are healthy and vigorous.

This certification in no way changes the original provisions of the contract.

**Participant Certification**

I certify that the information reported herein is true and correct to the best of my knowledge and is based on field inspections. I understand that it is the responsibility of contract participants to ensure that an approved and established cover is maintained through the life of the contract. I understand that if an FSA spot check reveals the contract has not been adhered to, corrective actions, as provided for in the contract, may be necessary.

Participant Signature: ___________________________ Date: ______________________
1 State Policy

A Background

CRP spot checking policy was revised by the change to a national spot check selection process. Under the that policy, a limited number of producers in Washington are selected for review in all programs. This results in some counties having very few or no CRP participants subject to spot check. The STC has determined that in order to maintain the credibility of CRP compliance activities in counties with participation, a minimum number of contracts in each county must be spot checked each year.

In developing this policy, the STC considered input gathered from County Offices, including:

- the desire to limit the number of spot checks because of workload and limited staff and resources
- giving credit for spot checks based on public complaints or COC concerns.

2 CRP Spot Check Policy

A Spot Check Requirements

County Offices shall conduct at least the following number of on-the-ground spot checks each fiscal year. Contracts selected by the COC or CED for spot check based on concerns about contract compliance may count towards the required number of spot checks, except as noted in the table. If a CRP participant is selected through the national selection process, that producer’s contract(s) may count as random selections under this policy.

Example: I can’t believe it’s snowing again County is required to spot check 25 contracts according to the table on page 3. Through the national selection process, the county must spot check 2 producers who have 3 and 6 CRP contracts respectively. Since 9 CRP contracts are inspected as a result of the national selection process, the county is only required to spot check 16 additional contracts under STC policy and only 1 additional contract must be a random selection.--*
2 CRP Spot Check Policy (Continued)

A Spot Check Requirements (Continued)

<td>25 – At least 10 must be random selections.</td>
</tr>
</tbody>
</table>

B Documenting Spot Checks

CRP spot checks conducted according to this notice shall be documented on page 3 of this exhibit. These spot checks shall not be documented in the National Compliance Review Database.

C Annual Certification

By November 15, county offices shall provide a certification to the STC that at least the minimum number of spot checks called for in this policy were conducted in the prior fiscal year. This information must include the information on page 4 of this exhibit.--*
**Washington CRP Spot Check Worksheet**

This worksheet shall be used to document CRP spot checks conducted in accordance with the STC policy. Spot checks conducted based on the national spot check selection process shall be documented in the National Compliance Review Database.

WASHINGTON CRP SPOT CHECK REPORT FOR FISCAL YEAR _____

This report is due by November 15 following the fiscal year.

County(ies): ___________________________

1. Total number of spot checks required for the county(ies) including national selection spot checks: ____________ (should equal a + b)
   a. Total number of CRP spot checks completed for the national selection spot check process: ____________
   b. Total number of CRP spot checks completed per WA Exhibit 8 in excess of the national selection spot check process: ____________

2. For the following, report for the total number of contracts with findings under the combined national selection and WA Exhibit 8 selection.
   a. Contracts with no finding: ____________
   b. Contracts with an unauthorized commodity planted: ____________
   c. Contracts with an unauthorized activity or treatment such as mowing, spraying, or burning, during the nesting season: ____________
   d. Contracts with an unauthorized use such as haystacks, equipment parking or conversion to non-ag use: ____________
   e. Contracts with unauthorized harvesting, haying or grazing: ____________
   f. Contracts with undesirable weeds, plants or insects, including noxious weeds: ____________
   g. Contracts where the participants failed to maintain the required cover: ____________
   h. Contracts where the COC assessed a payment reduction as a result of spot check findings: ____________  Total payment reductions assessed: $__________
   i. Contracts where the COC terminated contract acreage as a result of spot check findings: ____________  Total refunds required: $__________ **
1 State Policy

A Background

A review of cases submitted to the State Office reveals significant inconsistencies in how counties notify predecessors and successors during CRP contract succession. In some cases this has led to misunderstandings by the participants about their obligations, unanticipated refunds, and appeals. This exhibit provides guidance on the requirements to notify predecessors and successors in writing about contract successions. For successions not involving a change in participants follow paragraph 546 and 555.

2 Contract Successions

A Applicable Circumstances

A successor CRP-1 is required when there is a change in any of the participants on the contract or when there are significant changes in the contract, such as when acreage is withdrawn. Pen and ink changes, with participant initials and dates, may be utilized for minor changes, such as when acreage is revised due to CLU corrections.

B Actions When a Successor Contract is Required

When there will be a change in the participants on the CRP-1, the following steps must be completed.

- The successor or predecessor must provide documentation to support the succession, such as a deed or sales contract, or if a land ownership change has not occurred, documentation determined acceptable by the COC.

- A revised CRP-1 with all applicable changed incorporated must be created with the next applicable suffix added to the contract number.

- All participants on the successor contract, including zero share participants must sign the successor CRP-1.

- New participants on the contract must sign the predecessor conservation plan. If a revised conservation plan is developed, it must be signed by:
  - all participants on the successor CRP-1
  - FSA
  - NRCS
  - Conservation District (unless they decline).--*
2 Contract Successions (Continued)

B Actions When a Successor Contract is Required (Continued)

- All parties signing the contract, even if they are not new to the contract, must have acceptable signature authority on file if they are signing for a legal entity or as an agent for an individual.

- All successors who have not previously:
  - been provided a copy of the CRP-1 Appendix applicable to the contract must be provided a copy of the Appendix when they are asked to sign the successor contract. This is the Appendix that was in effect when the contract was first approved.
  - signed the landlord/tenant certification in subparagraph 130 E of 2-CRP must sign the certification.
  - signed an FSA-570, Waiver of Eligibility for Emergency Assistance, must sign the form
  - been a participant or member of a participant on the contract must file an AGI form for the fiscal year the successor contract will be approved. See paragraph 3 of this exhibit.

- All signatures on all required documents must be provided within 60 days of the successors being notified.

- If new or updated eligibility forms are required for any successor, these do not need to be provided within 60 days of notification, but must be provided before their payments are issued.

- After all required documents have been received with all required signatures, and the successor CRP-1 has been approved by the COC or designee, the predecessor CRP-1 must be defaced with the word “VOID”. COFs may also enter the date if desired.

- Any predecessor who is not a participant on the successor CRP-1 must be notified in writing that they are no longer subject to the CRP-1 and its provisions.--*
2 Contract Successions (Continued)

C Required Notification to Successors and Predecessors

When the successor CRP-1 and related documents are ready for signature, written notification must be provided. The successors must be notified that:

- they have 60 calendar days from the date of notification to sign the:
  - CRP-1
  - conservation plan, if not previously signed or a new plan has been provided
  - landlord/tenant statement, if not previously signed
  - FSA-570, if not previously signed
  - file an AGI form.

- upon approval of the successor contract, they will:
  - become liable for any outstanding compliance violations
  - be liable for refunding any payments earned by themselves or the predecessors should any future contract violations occur that require a refund of payments.

Predecessors must be provided a courtesy copy of this notification or a separate, locally developed letter.

D Written Notification

Notification should be accomplished using the wording on pages 5-6. The wording may be adapted by County Offices provided all the listed notifications are included.

E Appeal Rights

In most cases if the successor documents are created at the request of the participant(s), there is no need to provide appeal rights. If the County Office feels there are circumstances involved that could cause some of the parties to consider the action adverse, appeal rights should be included in the notification. If the County Office is unsure whether appeal rights should be included, they should contact their DD or the State Office.

F Failure to Meet the 60-Day Deadline

If the successor documents are not submitted with all required signatures within 60 days of the notification letter, the predecessor contract shall be terminated. All participants on the predecessor contract shall be notified in writing of the requirement to refund the payments received. This letter must include the applicable appeal rights.
3 Applicable AGI Form for Successors

A Applicable Circumstances

The AGI rules applicable to a successor on a CRP contract are based on the original contract approval date or the approval date of the extension/re-enrollment during REX. Original contracts:

- Approved prior to May 13, 2002, and not extended or re-enrolled, are not subject to AGI.

- Approved during May 13, 2002 through September 30, 2008, and extended or re-enrolled, are subject to 1-PL AGI rules and successors joining the contract must file a CCC-526C for the fiscal year the successor contract is approved.

- Approved on or after October 1, 2008 are subject to 4-PL AGI rules, and successors joining the contract must file a CCC-931 for the fiscal year the successor contract is approved.

- Approved at any time before the REX process and extended or re-enrolled during the REX process are subject to 1-PL AGI rules and successors joining the contract must file a CCC-526C for the fiscal year the successor contract is approved.

- Approved at any time and extended during the 2009 extension process, including contracts extended during the REX process, are subject to 4-PL rules and successors joining the contract must file a CCC-931 for the fiscal year the successor contract is approved.

In general participants on the predecessor contract who remain on the successor contract do not have to file a new AGI form or comply with AGI limitations for the year the successor contract is approved. They were required to comply with AGI provisions when they originally joined the contract.

Exception: A participant on a contract who is added to a successor contract in another capacity must comply with AGI provisions for the fiscal year the successor contract is approved.

Example: Brian Bob enrolled land in contract 100 which was approved in fiscal 2006. Brian Bob participated on the contract as an individual filed a CCC-526 for 2006. In 2010, Brian Bob’ uncle, who was also a participant on the contract, passed away and he share of the contract was succeeded to by his estate. Brian Bob is an heir to the estate. Successor contract 100A with the estate was approved in 2010. Brian Bob must file a CCC-526C for 2010 even though he was previously on the contract because he joined the successor contract in a new capacity as an heir of an estate.
*--Producer Notification for CRP Contract Successions

Notification Letter to Successors and Predecessors for Contract Succession

Dear Producer,

We have been informed that the eligible participants for Conservation Reserve Program (CRP) contract number ________ have changed. The basis of the change is (insert request received and basis of need for succession).

As a successor to this CRP contract, you must take the following actions within 60 calendar days of this notification and be aware of the following requirements and obligations. Please note that even if you were a participant on the contract prior to this succession, you are considered a contract “successor” under CRP provisions.

As a successor to this contract you must:

1. Sign the successor CRP-1 (attached). By signing the contract, you are acknowledging that you have received a copy of the CRP-1 (Appendix) applicable to this contract. A copy is attached if this is your first participation in this contract. If you were a participant on the preceding contract, you were already provided a copy. If you wish, FSA will provide another copy.

2. Sign the conservation plan for this contract if you have not previously done so.
   _____ Applicable and attached. _____ Previously signed and not attached.
   If the vegetative cover is not already established, you must establish the cover and maintain it as called for in the conservation plan and the CRP contract provisions. If the vegetative cover is already established, you must maintain it as called for in the conservation plan and CRP contract provisions.

3. Sign the CRP landlord/tenant certification if you have not previously done so.
   _____ Applicable and attached. _____ Previously signed and not attached.

4. Sign form FSA-570, Waiver of Eligibility for Emergency Assistance, if you have not previously done so.
   _____ Applicable and attached. _____ Previously signed and not attached.

5. Sign form _____ CCC-562C or _____ CCC-931, Average Adjusted Gross Income Certification, if you have not previously done so for this contract.
   _____ Applicable and attached. _____ Previously signed and not attached.--*
*--Producer Notification for CRP Contract Successions

Notification Letter to Successors and Predecessors for Contract Succession (Continued)

Submit all the documents listed above as applicable, with your signature, within 60 days from the date of this letter. Failure of all contract participants to sign and return any documents listed can result in termination of the contract and a requirement that all prior payments be refunded. By becoming a successor to this contract, you become liable for:

- any outstanding compliance violations
- refunding any payments earned by you or any predecessors should a future contract violation occur that requires a refund of payments.

Once the successor contract is approved, prior participants who are not on the successor contract will be released from the contract’s requirements.

If you have not previously submitted them, you may also need to submit payment eligibility forms to receive future payments on this CRP contract. If any of these forms are required, a copy is attached. Please contact our office if you have questions about how to complete the forms.

Our goal is for you to successfully succeed to this contract, but also understand the obligations you accept by doing so. Please feel free to contact our office if you have questions about any of the items discussed above, and again, please remember these documents must be signed and returned within 60 days.

Sincerely,

CED

cc: Contract Predecessor(s) Not on the Successor Contract--*
Summary of the Application of 1-PL and 4-PL Rules to CRP

A Important Notes

This guidance is general in nature and is not intended to provide all necessary information needed to make a specific determination. The FSA payment limitation determinations and application of payment limits will be based on the specific circumstances of each producer.

In order for the CRP and payment limitation software to work correctly, it is critical that counties issue producer’s payments in contract number order so that 1-PL contracts are paid before 4-PL contracts are paid.

B Background

Contracts originally approved by FSA on or before September 30, 2008 are subject to 1-PL rules and will remain so for the life of the contract, including successors added to the contract during the time it is in effect. Contracts originally approved after September 30, 2008 are subject to 4-PL rules. Contracts under both rules are subject to the same $50,000 payment limitation. Because producers could have CRP contracts subject to both rules at the same time, the agency has established payment processes to ensure the proper application of the payment limits to all of a producer’s CRP direct and indirect earnings. In calculating potential payments on contracts subject to 4-PL, a participant’s payments earned under 1-PL provisions are treated as if they were subject to direct attribution.

C Example 1

Corporation Nicole-Norene is made up of Individual Nicole and Individual Norene, each holding a 50% interest. Corporation Nicole-Norene, Nicole and Norene are not combined under 1-PL rules. Corporation Nicole-Norene, Nicole and Norene all earn CRP payments directly and Nicole and Norene earn them indirectly through the corporation. Norene enrolls new land as an individual under contract 4 which is subject to 4-PL rules.

<table>
<thead>
<tr>
<th>Contract No.</th>
<th>Subject to:</th>
<th>Direct Payee</th>
<th>Payment</th>
<th>Nicole-Norene</th>
<th>Nicole</th>
<th>Norene</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1-PL</td>
<td>Nicole-Norene</td>
<td>$50,000</td>
<td>$50,000</td>
<td>$25,000</td>
<td>$25,000</td>
</tr>
<tr>
<td>2</td>
<td>1-PL</td>
<td>Nicole</td>
<td>$20,000</td>
<td></td>
<td></td>
<td>$20,000</td>
</tr>
<tr>
<td>3</td>
<td>1-PL</td>
<td>Norene</td>
<td>$20,000</td>
<td></td>
<td></td>
<td>$20,000</td>
</tr>
<tr>
<td>4</td>
<td>4-PL</td>
<td>Norene</td>
<td>$10,000</td>
<td></td>
<td></td>
<td>$10,000</td>
</tr>
</tbody>
</table>

The producers could earn all the payments under the 1-PL contracts because they were not combined and no one directly earned more than $50,000. However, when Norene enrolled an additional $10,000 worth of land, her 1-PL direct and indirect payments plus her 4-PL contract exceeded $50,000 and she will only receive $5,000 on contract 4.
D  Example 2

*--Individual Stephanie holds a 50% share in each of four corporations, Skamania Inc., Clallam Inc., Pend Oreille Inc., and Island Inc. The remaining 50% of each corporation is owned by four separate, unrelated individuals. Stephanie is not combined with any of the corporations because she does not own a majority interest. All four corporations earn CRP payments directly.

<table>
<thead>
<tr>
<th>Contract No.</th>
<th>Subject to:</th>
<th>Direct Payee</th>
<th>Payment</th>
<th>Skamania Inc.</th>
<th>Clallam Inc.</th>
<th>Pend Oreille Inc.</th>
<th>Island Inc.</th>
<th>Stephanie</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>1-PL</td>
<td>Skamania Inc.</td>
<td>$30,000</td>
<td>$30,000</td>
<td></td>
<td></td>
<td></td>
<td>$15,000</td>
</tr>
<tr>
<td>6</td>
<td>1-PL</td>
<td>Clallam Inc.</td>
<td>$30,000</td>
<td></td>
<td>$30,000</td>
<td></td>
<td></td>
<td>$15,000</td>
</tr>
<tr>
<td>7</td>
<td>1-PL</td>
<td>Pend Oreille Inc.</td>
<td>$30,000</td>
<td></td>
<td></td>
<td>$30,000</td>
<td></td>
<td>$15,000</td>
</tr>
<tr>
<td>8</td>
<td>1-PL</td>
<td>Island Inc.</td>
<td>$30,000</td>
<td></td>
<td></td>
<td></td>
<td>$30,000</td>
<td>$15,000</td>
</tr>
</tbody>
</table>

Because no corporation’s payment exceeds $50,000, Stephanie is not combined with any of the corporations, and none of the corporations are combined, all payments can be earned.

Contract 5 expires and is re-enrolled as contract 9, subject to 4-PL rules.

<table>
<thead>
<tr>
<th>Contract No.</th>
<th>Subject to:</th>
<th>Direct Payee</th>
<th>Payment</th>
<th>Skamania Inc.</th>
<th>Clallam Inc.</th>
<th>Pend Oreille Inc.</th>
<th>Island Inc.</th>
<th>Stephanie</th>
</tr>
</thead>
<tbody>
<tr>
<td>6</td>
<td>1-PL</td>
<td>Clallam Inc.</td>
<td>$30,000</td>
<td></td>
<td>$30,000</td>
<td></td>
<td></td>
<td>$15,000</td>
</tr>
<tr>
<td>7</td>
<td>1-PL</td>
<td>Pend Oreille Inc.</td>
<td>$30,000</td>
<td></td>
<td></td>
<td>$30,000</td>
<td></td>
<td>$15,000</td>
</tr>
<tr>
<td>8</td>
<td>1-PL</td>

<td></td>
<td>$15,000</td>
</tr>
<tr>
<td>9</td>
<td>4-PL</td>
<td>Skamania Inc.</td>
<td>$30,000</td>
<td></td>
<td>$30,000</td>
<td></td>
<td></td>
<td>$15,000</td>
</tr>
</tbody>
</table>

4-PL provisions call for all 1-PL contracts to be treated as if they are subject to direct attribution in determining how much the producers can earn on their 4-PL contracts. Stephanie would be attributed $45,000 under the 1-PL contracts. Consequently Skamania Inc.’s payment will be reduced by $10,000 because Stephanie can only earn an additional $5,000. These contracts must be paid in contract number order for the software to properly limit the payments.--*
Example 3

*--Individual Dave and Individual Paul each own 50% of DP Inc. They have a second corporation where Dave owns 60% and Paul 40%, and a third corporation where Paul owns 60% and Dave 40%. Because of their majority interest in one corporation and collective majority interest in both corporations, Dave and Paul are combined. Consequently their 100% ownership of DP Inc. results in Dave, Paul and DP Inc. all being combined as one “person” under 1-PL provisions. Dave and --*

Paul own land enrolled in the 1-PL contracts listed below, with DP Inc. receiving a 50% share on each contract and Dave and Paul each receiving a 25% share. Because the combined “person” reached the payment limitation, no more land was enrolled.

<table>
<thead>
<tr>
<th>Contract No.</th>
<th>Subject to:</th>
<th>Total Payment</th>
<th>Direct Payment DP Inc.</th>
<th>Direct Payment Dave</th>
<th>Direct Payment Paul</th>
<th>DP Inc.</th>
<th>Dave</th>
<th>Paul</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>1-PL</td>
<td>$20,000</td>
<td>$10,000</td>
<td>$5,000</td>
<td>$5,000</td>
<td>$10,000</td>
<td>$10,00</td>
<td>$10,00</td>
</tr>
<tr>
<td>11</td>
<td>1-PL</td>
<td>$20,000</td>
<td>$10,000</td>
<td>$5,000</td>
<td>$5,000</td>
<td>$10,000</td>
<td>$10,00</td>
<td>$10,00</td>
</tr>
<tr>
<td>12</td>
<td>1-PL</td>
<td>$10,000</td>
<td>$5,000</td>
<td>$2,500</td>
<td>$2,500</td>
<td>$5,000</td>
<td>$5,000</td>
<td>$5,000</td>
</tr>
</tbody>
</table>

Dave and Paul decide to enroll additional land in CRP contract 13 under 4-PL provisions. Shares on this contract with also be 50% to DP Inc. and 25% each to Dave and Paul. The payments earned under the 4-PL contract are not subject to the 1-PL “person” combination.

<table>
<thead>
<tr>
<th>Contract No.</th>
<th>Subject to:</th>
<th>Total Payment</th>
<th>Direct Payment DP Inc.</th>
<th>Direct Payment Dave</th>
<th>Direct Payment Paul</th>
<th>DP Inc.</th>
<th>Dave</th>
<th>Paul</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>1-PL</td>
<td>$20,000</td>
<td>$10,000</td>
<td>$5,000</td>
<td>$5,000</td>
<td>$10,000</td>
<td>$10,00</td>
<td>$10,00</td>
</tr>
<tr>
<td>11</td>
<td>1-PL</td>
<td>$20,000</td>
<td>$10,000</td>
<td>$5,000</td>
<td>$5,000</td>
<td>$10,000</td>
<td>$10,00</td>
<td>$10,00</td>
</tr>
<tr>
<td>12</td>
<td>1-PL</td>
<td>$10,000</td>
<td>$5,000</td>
<td>$2,500</td>
<td>$2,500</td>
<td>$5,000</td>
<td>$5,000</td>
<td>$5,000</td>
</tr>
<tr>
<td>13</td>
<td>4-PL</td>
<td>$20,000</td>
<td>$10,000</td>
<td>$5,000</td>
<td>$5,000</td>
<td>$10,000</td>
<td>$10,00</td>
<td>$10,00</td>
</tr>
</tbody>
</table>

Because neither DP Inc., Dave nor Paul has directly or indirectly earned more than $50,000, and the “person” combination does not apply to the contract 13 payments, all payments will be earned. These contracts must be paid in contract number order for the software to properly issue the payments.
**Required Documentation for Relief/Waiver Cases**

When submitting requests for relief, waivers of the 12-month ownership requirement, partial terminations of CRP-1, waivers of refunds and waivers of liquidated damages, County Offices shall submit the following documentation.

</thead>
</table>
| partial termination of CRP-1 | Written request from all participants.  
Copy of original CRP-2, or new CRP-2, showing EBI and bid cap for resulting acres if partial termination is approved.  
- If documented on original CRP-2, do this on a copy, and submit copy of original CRP-2 and revised CRP-2; do not write the changes on the original CRP-2.  
- If documented on a new CRP-2, copy of original CRP-2 must also be submitted.  
**Notes:** If the bid cap is lower than the current rental rate, the producer will be required to accept the new bid cap amount.  
If approved, the producer will be liable for refunds and liquidated damages on the terminated acreage. |
| waiver of refunds and liquidated damages | Written request from participant.  
Documentation of any circumstances beyond the participant’s control that resulted in the assessment of liquidated damages.  
Calculations showing total refund due, including rental payments, cost share payments, with interest, and liquidated damages. |
A **Applicability**

DAFP has established rental rates for marginal pasture land enrolled in practices:

- CP22, Riparian Buffer
- CP29, Marginal Pastureland Wildlife Habitat Buffer
- CP30, Marginal Pastureland Wetland Buffer.

These rates must be used for marginal pastureland, rather than approved soil rental rates (SRR). The rates apply to all marginal pastureland physically located in the county.

Separate rates are provided for land enrolled along seasonal streams and land enrolled along perennial streams or eligible permanent water bodies. The code for land along seasonal streams is “MPLSEA” and for the land along perennial streams or eligible permanent water bodies, “MPLPER”. These codes should be entered in item 14C, Map Unit Symbol, on the CRP-2C. The rental rates on the following page should be entered in item 14E of the CRP-2C.

**Notes:** Marginal pastureland and cropland must be offered on separate CRP-2’s and CRP-1’s.

Marginal pastureland rental rates **do not** apply to CREP contracts. CREP maximum payment rate calculations are determined using the current soil rental rates (SRR) for the land in the offer.

Cost Share Policies and Rates for CRP

1 Use of This Exhibit

A Applicability

The STC policies and rates in this Exhibit apply to all CRP and continuous CRP cost sharing. See WA Exhibit 24 for CREP cost share policies and rates.

2 Mowing and Light Tillage for Enhancing Existing Covers

A Cost Share Eligibility

CRP cost sharing is authorized to enhance existing vegetative covers through mowing or light tillage operations under the following conditions:

- the practice is CP1, CP2, CP4B, CP4D, or CP21
- the mowing or light tillage is required in the CPO
- the mowing or light tillage is limited to no more than two times, and takes place within 12 months of the CRP-1 effective date.

3 Rice Hulls and Other Carriers

A Cost Share Eligibility

Rice hulls and other carriers are authorized for cost share under all seed components.
Cost Share Policies and Rates for CRP

4 Seeding Rates

A Tolerance

NRCS specifications call for a specific number of pounds of seed per acre. However, the size of areas selected for enhancement, drill settings, field corners and other issues may make it difficult to meet the precise number of pounds. The STC and NRCS State Office have agreed to the following policy.

Policy: Final seeding rates within 10 percent, plus or minus, of the specified seeding rate, may be considered to meet specifications. In this case, all seed actually planted, up to 110 percent of the specified rate, is eligible for cost sharing.

Producers who seed less than 90 percent, or more than 110 percent, of the required seeding rate, must be reviewed by NRCS and the COC on a case by case basis. When less than 90 percent of the specified rate is used, the practice must generally be determined to not meet specifications. When more than 110 percent of the specified rate is used, seed in excess of 110 of the specified rate is generally not eligible for cost sharing, unless the COC and NRCS determine that conditions beyond the producers control existed, and the COC would have approved additional cost sharing originally, had these conditions been known.

Note: Cost sharing shall be limited to the minimum materials necessary to establish the practice.

B Aerial Seeding

To meet NRCS specifications, seeding done by aerial seeding with an airplane or helicopter must be done as twice the normal seeding rates shown in WA Exhibit 4. In that case, the seed cost share holldowns in this exhibit should be doubled.
Cost Share Policies and Rates for CRP

5 Cost Sharing on Animal Damage Control Devices

A STC Policy

Cost sharing for tree shelters, netting, plastic tubes or other animal damage control devices is only authorized under this practice when both the following apply:

- the designated technical agency determines that the devices are needed for successful establishment of the trees/shrubs on the specific site
- the device required, rather than over-planting or another type of device, is the most cost-effective method of stand establishment.

Notes: Cost sharing under this policy is authorized for hardwoods, conifers and shrubs.

Cost sharing for animal damage control devices is not authorized for CP4B or CP4D.

6 Special Components for Seedbed Preparation and Site Preparation

A *—SeedbedX for Seedbed Preparation

Cost sharing for seedbed preparation has been established as flat rates, currently components Seedbed15 and Seedbed16. These flat rates were established by reviewing several “typical” scenarios for seedbed preparation, and determining the cost of the tillage and/or pesticide operations in each. These were then averaged to arrive at the flat rate.

In a limited number of very unique circumstances, producers may be required to do substantially more field work or use more expensive herbicides, than were used to establish the current flat rates. COC’s can approve the use of component SeedbedX (where X is a sequential number assigned to the county’s component), in addition to Seedbed15 or Seedbed16, if all the following conditions are met:—*

- the COC determines that the participant must incur substantially more costs for seedbed preparation than those used to establish the flat rate because of the need for additional tillage operations, additional pesticide applications, or the use of a more expensive chemical

- the steps causing the substantially higher costs are required by, and included in, the conservation plan or supporting documents

- the steps causing the substantially higher costs are not the result of the producer’s failure to take appropriate actions on seedbed preparation.
Cost Share Policies and Rates for CRP

6 Special Components for Seedbed Preparation and Site Preparation (Continued)

A *--SeedbedX for Seedbed Preparation (Continued)

Example: The producer failed to carry out the steps required in the original conservation plan, resulting in the need to conduct additional field operations to prepare a suitable seedbed. The additional operations resulted in increased costs. The producer is not eligible for cost sharing under component SeedbedX.

COCs can provide cost share under SeedbedX in addition to Seedbed15 or Seedbed16 if the criteria described above are met. Cost sharing under SeedbedX should only be for costs exceeding the rates used to establish Seedbed15 and Seedbed16 (costs exceeding $72 for Seedbed15 or $58 for Seedbed16).

Within CSS, counties can only establish one holddown for SeedbedX.

While the STC has not established the definition of a significant increase in operations or costs, it is anticipated that:

- SeedbedX will only be used when the increased operations and costs are substantial
- the use of SeedbedX will be very limited.

B SitePrepX for Site Preparation

Cost sharing under component SitePrepX (where X is a sequential number assigned to the county’s component) is not authorized in western Washington.

Cost sharing for site preparation for eastern Washington is currently limited to component SitePrep34, a flat rate for mechanical or chemical spot treatment. In a limited number of unique circumstances, producers may be required to do more field work or use more expensive materials, than were used to establish the current flat rate. COC’s can approve the use of component SitePrepX, in addition to SitePrep34, if all the following conditions are met:

- the COC determines that the participant must incur substantially more costs than would be covered by SitePrep34--*
- the steps causing the substantially higher costs are required by, and included in, the conservation plan or supporting documents
- the steps causing the substantially higher costs are not the result of the producer’s failure to take appropriate actions on site preparation.
Cost Share Policies and Rates for CRP

6 Special Components for Seedbed Preparation and Site Preparation (Continued)

B *--SitePrepX for Site Preparation (Continued)

Example: The producer failed to carry out the steps required in the original conservation plan, resulting in the need to conduct additional field operations to prepare the site. The additional operations resulted in increased costs. The producer would not be eligible for cost sharing under component SitePrepX.

Within CSS, counties can only establish one holddown for SitePrepX.

While the STC has not established the definition of a significant increase in operations or materials costs, it is anticipated that:

- SitePrepX will only be used when the increased operations and costs are substantial
- the use of SitePrepX will be very limited.--*
Cost Share Policies and Rates for CRP

7 Partial Payments

A Making Partial Payments

COC’s are authorized to issue cost share partial payments when:

- a component is completed on all acreage covered by FSA-848
- a component is completed on part of the acreage covered by an FSA-848

Example: The producer completes seeding on part of the acreage under an FSA-848, and the remaining acreage will not be seeded for several months.--*

- a seedbed preparation or site preparation component is partially completed, and both the following apply:
  - the partial payment is limited to 50 percent of the participant’s out-of-pocket expenses for herbicides, as documented by receipts
  - the partial payment is limited to less than the full component payment until the component is complete.

Examples: The participant purchases and applies herbicides as part of the seedbed preparation component. The COC may authorize a partial payment up to 50 percent of the chemical cost, provided the payment amount is less than the full component amount.

The participant completes half the tillage operation for a seedbed or site preparation, but no herbicides have been applied. Since no chemical costs were incurred, a partial payment is not authorized.

Note: Partial payments are not authorized for the purchase of any material, such as seed or chemicals, until it is applied to the land.

8 Cost Sharing on SAFE CP38 Practices

A Approved Components

Cost sharing is authorized under CP38 practices for components that are approved for the underlying practice the CP38 is based on. For example if practice CP38E is based on underlying practice CP4D, all components shown as approved for CP4D in this exhibit are authorized for the CP38E.
Cost Share Policies and Rates for CRP

9 Conversion to New Component Codes with Cost Share Software (CSS)

A New Codes

*--With the conversion to the CSS system, all cost share components previously established for AD-245 software were revised. Component codes in the AD-245 system were limited to 5 characters. CSS allows a longer, more descriptive name that hopefully will be clearer to staff and producers. For example old component CA20 for post-plant weed control with herbicides is not WeedCntrl20.

To assist counties in converting to the new component codes, the component descriptions provided in the following pages and CSS end with the old component code in parenthesis. In addition, a listing of component codes is available on the State Share Point site under Farm Programs, CRP, Shared Documents, Cost Share Guidance, Authorized Components. The spreadsheet provides lists of all currently authorized components sorted by old code and new code, as well as a list of county specific components.

B County Specific Components

Certain components are established as “50% of the actual cost not to exceed an amount established by the COC.” An example is the Fence component. The State Office must load these components in Program Provisioning (PP) for each separate rate. These components are then approved specifically for the county(ies) using that rate.

Example: County A establishes a cost share holddown of $2/foot for fence and County B established a holddown of $3/foot. County A would be assigned component Fence1 and County B component Fence 2.

In the following pages county specific codes end with “X” which will be changed to the assigned number when the component is established in PP. To request a county specific component, County Offices must use the “Request for Components” spreadsheet located on the State Share Point as the location described in subparagraph A. The approved code will be provided when spreadsheet is returned to the county. It can then be copied from PP to CSS.--*

AGREEMENT

BETWEEN

THE U.S. DEPARTMENT OF AGRICULTURE
COMMODITY CREDIT CORPORATION

AND

THE STATE OF WASHINGTON
CONCERNING THE IMPLEMENTATION OF A
CONSERVATION RESERVE ENHANCEMENT PROGRAM

I. PURPOSE

This Agreement is between the Commodity Credit Corporation (CCC) of the United States Department of Agriculture (USDA) and the State of Washington (State) to implement a Conservation Reserve Enhancement Program (CREP) to assist in the recovery of salmon species that have been listed as threatened or endangered species under the federal Endangered Species Act.

II. GENERAL PROVISIONS

A number of salmonid species native to Washington have been either listed or proposed for listing as threatened or endangered species under the federal Endangered Species Act. Agricultural activities in riparian corridors, along with agriculture-related impacts on water quality, have contributed to habitat loss of these coldwater fish species in Washington. This Agreement for this Washington CREP is designed to help alleviate some of these problems.

It is the intent of USDA, CCC and the State of Washington that this CREP will address the following objectives:

1. Restoration of 100 percent to the area enrolled for the riparian forest practice to a properly functioning condition in terms of distribution and growth of woody plant species.

2. Reduction of sediment and nutrient pollution from agricultural lands adjacent to the riparian buffers by more than 50 percent.

3. Establishment of adequate vegetation on enrolled riparian areas to stabilize 90 percent of stream banks under normal (non-flood) water conditions.
4. Reduction of the rate of stream water heating to meet State ambient water quality standards by planting adequate vegetation on all riparian buffer lands.

5. Provision of a contributing mechanism for farmers and ranchers to meet the water quality requirements established under federal law and under Washington’s water quality laws.

6. Provision of adequate riparian buffers on 2,700 stream miles to permit natural restoration of stream hydraulic and geomorphic characteristics which meet habitat requirements of salmonids.

The intended outcome of this Agreement in particular is to enhance the ability of producers to enroll certain acreage under the Conservation Reserve Program (CRP), where deemed desirable by USDA, CCC, and Washington. This Agreement is not intended to supersede any rules or regulations, which have been, or may be, promulgated by either USDA or CCC.

III. AUTHORITY

The CCC has the authority under provisions of the Food Security Act of 1985, as amended (1985 Act)(16 U.S.C. 3830 et seq.), and the regulations at 7 CFR part 1410 to perform all its activities contemplated by this agreement. In accordance with the 1985 Act, CCC is authorized to enroll land in CRP through December 31, 2007.

Sections 1230, 1234, and 1242 of the 1985 Act authorize the CCC to enter into agreements with States to use the CRP in a cost-effective manner to further specific conservation and environmental objectives of a State and the nation. Other authorities may also apply.

The authority for Washington to enter into this Agreement is RCW 43.06.120, Laws of Washington.

IV. PROGRAM ELEMENTS

USDA, CCC, and Washington agree that:

A. The Washington CREP will consist of a special continuous sign-up CRP component and a State of Washington incentive. The Washington CREP will seek to enroll up to 100,000 acres of agricultural lands adjacent to water bodies that provide, or have the potential to provide, important habitat for salmonids. For the CP22 (Riparian Buffer) practice, these water bodies can be identified using maps from the 1993 Salmon and Steelhead Stock Inventory Report (SASSI) or updates to SASSI maps carried out by local conservation districts with the concurrence of Washington Department of Fish and Wildlife (WDFW) and Tribal fisheries biologists. Regular updates to SASSI carried out by WDFW can also be used to identify eligible lands. Where better data are available, important salmonid habitat can also be identified using one of the following processes:
1. Under guidance from Washington legislative engrossed substitute House Bill 2496, an act relating to salmon recovery planning, the Washington State Conservation Commission is generating reports identifying habitat factors in each Water Resource Inventory Area (WRIA) that limit the production of salmonids. These Habitat Limiting Factors Analyses identify the known and presumed distribution of salmonids and the salmonid habitat in need of restoration. Eligible agricultural lands adjacent to these areas will be considered eligible for CREP.

2. The Salmon and Steelhead Habitat Inventory and Assessment Project (SSHIAP) is completing a GIS-based inventory of salmonid habitat conditions throughout WRIAs 1-23, and ultimately throughout the state. Eligible agricultural lands adjacent to streams identified by SSHIAP with known or presumed presence of salmonids will be considered eligible for CREP.

3. In cases where SASSI, SASSI updates, Habitat Limiting Factors Analysis or SSHIAP have not been completed, eligible streams may be designated if the conservation district, WDFW, and Tribal biologists all agree riparian habitat is a significant limiting factor for salmonids. The criteria for these updates will include all streams in watersheds with known presence of SASSI stocks that are below natural barriers to fish passage and meet appropriate habitat requirements for the species of interest (e.g. gradient < 12%).

Updates to the eligible streams for CREP, based on the criteria above, will be reviewed and approved annually by the Washington Conservation Commission and the Washington State FSA Committee, in consultation with the Washington State Technical Advisory Committee. In no case will the number of eligible stream miles exceed 10,000 miles for the CP22 (Riparian Buffer) practice.

4. CP23, CP23A, and CP30 practices are only eligible for wetlands hydrologically connected to designated streams as described above. Land may be enrolled in the CP22 (Hedgerow) practice if it is along a small stream designated in accordance with paragraphs 1-3 of this section, with a bank full width of less than 15 feet or along small (less than 15’ bankfull width) tributaries within 10 stream miles to a CP22 Riparian Buffer-designated stream. Land may be enrolled in the CP21 practice only if it is in a Water Resource Inventory Area (WRIA) that contains CP22 Riparian Buffer-designated streams, but not along salmonids habitat designated streams. Compliance with the terms of this paragraph will be determined by CCC.
The following are practice acreage enrollment goals under this agreement:

- CP22 (Riparian Buffer) (cropland and Marginal Pastureland [MPL]) 93,750 acres
- CP22 (Riparian Buffer Hedgerow) (cropland and MPL) 2,000 acres
- CP21 (Filter Strips) (cropland only) 4,000 acres
- CP23 (Wetland Restoration) (cropland only)
- CP23A (Non-Floodplain Wetland Restoration) (cropland only) 250 acres*
- CP30 (Marginal Pastureland Wetland Buffers) (MPL only)

*250 acres total for CP23, CP23A and CP30

Lands used for orchard, vineyard, or berry production with the required years of cropping history as specified in 2-CRP procedure, as determined by CCC, will be eligible for all Washington CREP practices, provided all other eligibility requirements are met.

B. Only practices CP21, CP22, CP23, CP23A, and CP30 are authorized under this Agreement. CP22 practices may be enrolled as CP22 (Riparian Buffer) using the NRCS 391 standard or as CP22 (Hedgerow) using the NRCS 422 standard, in accordance with USDA policies for similar enrollments. All other practices will be implemented using the approved NRCS standards listed in 2-CRP.

In determining CCC’s share of the cost of practice establishment, CCC shall use the appropriate CRP procedures. All approved conservation plans shall be consistent with applicable CRP statutes and regulations. Until the Natural Resources Conservation Service issues a new practice standard for Riparian buffers in the State of Washington, Riparian Buffers will be constructed in accord with the Riparian Buffer practice standard (practice code 391A), in accordance with USDA policies for similar enrollments. The maximum buffer width will be determined in accordance with 2-CRP and Field Office Technical Guide procedure. Modifications to these Field Office Technical Guides adopted subsequent to the date of this Agreement will be implemented as appropriate to achieve the overall purposes of this Agreement in a cost-effective manner.

C. The continuous sign-up CRP contracts for acres enrolled in this CREP must be a minimum of 10 years, but may not exceed a maximum of 15 years.

D. Eligible producers will not be denied the opportunity to offer eligible acreage for enrollment during general or continuous CRP enrollment periods.

E. CRP contracts executed under this Agreement will be administered in accordance with, and subject to, the CRP regulations at 7 CFR part 1410, and the provisions of this Agreement. In the event of a conflict, the CRP regulations will be controlling.
F. The Deputy Administrator for Farm Programs, Farm Service Agency, is delegated authority to carry out this Agreement, and with the Governor of Washington or his designee, may further amend this Agreement consistent with the provisions of the 1985 Act and the regulations at 7 CFR part 1410. The provisions of this Agreement may only be modified by written agreement between the parties.

G. This Agreement shall remain in force and effect until terminated by USDA, CCC or Washington. This Agreement may be terminated by either party upon written notice. Such termination will not alter responsibilities regarding existing contractual obligations under the CREP between participants and USDA or CCC, or between participants and Washington.

H. No lands may be enrolled under this program until the USDA CREP Program Manager concurs with a detailed State FSA directive supplement for the Washington CREP, which will provide a thorough description of this program, applicable practice provisions, and operating procedures, and until completion of the appropriate level of documentation required by the National Environmental Policy Act of 1969, 42 U.S.C. 4321, et. seq., as amended in accordance with 7 CFR 799.

V. FEDERAL COMMITMENTS

USDA and CCC agree to:

A. Cost share with producers for 50 percent of the eligible reimbursable costs of all approved conservation practices.

B. Make an annual rental payment for each eligible enrolled acre. The rental rate in all cases shall be the rate for non-irrigated land and will be calculated based on the existing CCC approved cropland Soil Rental Rates (SRR).
C. Make an additional annual incentive payment, as a percentage of the base CRP contract annual rental rate otherwise applicable to the land to be enrolled in the CREP (as calculated under paragraph V.B. without regard to other incentive payments), in the following amounts:

1. for land to be established as riparian buffers (CP22 Riparian Buffer) or wetland enhancement (CP23, CP23A, and CP30), 100 percent;
2. for land to be established as hedgerow riparian buffer (CP22 Hedgerow), 75 percent;
3. for land to be established as grass filter strips (CP21), 50 percent;
4. for lands protected under the Growth Management Act (RCW 75.090) as agricultural lands of State significance, 10 percent
5. subject to the availability of funds, pay a one-time Signing Incentive Payment (CRP-SIP) in accordance with 2-CRP procedure; and
6. subject to the availability of funds, pay a one-time Practice Incentive Payment (PIP) in accordance with 2-CRP procedure.

D. Make an annual “maintenance” incentive payment for each enrolled acre in the same manner as with other CRP contracts.

E. Administer contracts for lands approved under the CREP.

F. Develop conservation plans for treatment of a unit of land or water to address identified natural resource problems by devoting eligible land to permanent vegetative cover or other comparable practices, and review conservation plans developed by others for applicants offering to enroll eligible acreage in the CREP.

G. Conduct annual compliance reviews according to Farm Service Agency Handbook 2-CRP to ensure compliance with the CRP contract.

H. Provide information to landowners concerning Washington’s CREP program and technical assistance for the CREP program in general.

I. Permit successors-in-interest to enroll under CREP in the same manner as allowed for under any other CRP contract.
VI. STATE COMMITMENTS

Washington will:

A. Contribute not less than 20 percent of the overall annual program costs.

B. Be responsible for:

   (1) making the following payments to approved participants:
       (i) 10 percent of the eligible reimbursable cost for all conservation practices established under this CREP; and
       (ii) the difference between 100 percent, and the percent paid by CCC, of the eligible costs for animal damage control device for conifers; and
       (iii) a maintenance incentive equal to 100 percent of the eligible costs for annual maintenance of riparian buffers where continued action is needed to maintain buffer to specifications, for up to 5 years from the establishment date; and
       (iv) to compensate those already enrolled in the program prior to the USDA program changes of April 6, 2000, in the same manner as those enrolling after the date of this Amendment.

   (2) paying all costs associated with the annual monitoring program;

   (3) providing technical assistance in the development of conservation plans, including installation of forested riparian buffers;

   (4) providing conservation planning assistance for the entire farm to enrolled producers on a voluntary basis; and

   (5) providing grant funds for removal of fish barriers and installation of other salmonid habitat restoration practices.

C. Establish an Enhancement Program Steering Committee, which will include representatives from the State Technical Committee, National Marine Fisheries Service, U.S. Fish and Wildlife Service, Washington Department of Agriculture, Washington Department of Natural Resources, Washington Department of Fish and Wildlife, Extension Service, agriculture groups, conservation groups, local governments and Tribal government. This group will advise the Governor’s Joint Natural Resources Cabinet on the implementation of the CREP.

D. Seek applicants willing to offer eligible and appropriate land for enrollment in the CREP.

E. Facilitate the provisions of technical assistance from the local conservation districts, and other cooperators to develop conservation plans, in cooperation with the Natural Resource Conservation Service and Washington State Conservation Commission for applicants offering to enroll eligible acreage in the CREP.
F. Implement a broad campaign for continuous public information and education regarding the CREP.

G. Ensure that the CREP is coordinated with other agricultural and natural resource conservation programs at the State and Federal level.

H. Within 90 days of the end of each Federal fiscal year, the Conservation Commission shall provide a report to FSA summarizing the status of enrollments under this CREP and progress on fulfilling the other commitments of this program. The annual report to FSA shall include: level of program participation; the results of the annual monitoring program; a summary of non-federal CREP program expenditures; and, recommendations to improve the program. The report shall include a comparison of salmon habitat characteristics and population trends in streams where there is significant enrollment in this program with similar streams where program participation is not significant.

I. Within 90 days of the end of the Federal fiscal year, state will submit information summarizing its overall costs for the program. In the event that the State has not obligated 20 percent of the overall costs for a relevant Federal fiscal year, the State will fulfill its obligations within 90 days by paying the shortfall to CCC, or by providing some other mutually agreed-upon remedy.

VII MISCELLANEOUS PROVISIONS

A. All commitments by USDA and the State are subject to the availability of funds. In the event either party is subject to a funding limitation, it will notify the other party expeditiously and any necessary modifications will be made to this Agreement.

B. All CRP contracts under this CREP shall be subject to all limitations set forth in the regulations at 7 CFR Part 1410, including, but not limited to, such matters as economic use, transferability, violations and contract modifications. Agreements between owners or operators and the State may impose additional conditions not in conflict with those under the CRP regulations, but only if approved by CCC.

C. Neither the State nor USDA shall assign or transfer any rights or obligations under this Agreement without the prior written approval of the other party.

D. The State and USDA agree that each party will be responsible for its own acts and results to the extent authorized by law and shall not be responsible for the acts of any others and the results thereof.
E. As necessary, Washington and USDA agree to share appropriate data with each other, and with State of Washington CREP Cooperators, in accordance with the procedures, restrictions and exemptions established under the Freedom of Information Act, federal privacy laws, including Section 1619 of the Feed, Conservation, and Energy Act of 2008 (Public Law 110-246, section 1619), Section 2004 of the Farm Security and Rural Investment Act of 2002 (Public Law 107-171, section 2004), and other applicable laws, in furtherance of the requirements and goals of this Agreement.

IT IS SO AGREED:

CREP – Determining Applicable Rental Incentive Rates

Land enrolled in CREP is eligible for either a 100 or 110 percent incentive added to the normal weighted soil rental rate (SRR) when determining annual rental payments. Lands designated as “agricultural land of State significance” (also known as "agricultural lands of long-term commercial significance") under the State Growth Management Act (RCW 36.70A.170) are eligible for the 110 percent incentive. All other eligible lands are eligible for a 100 percent incentive. If an offer contains lands eligible for both a 100 percent and 110 percent incentive are included in one offer, the incentive rate for the offer will be a weighted average based on the number of offer acres in each category.

To determine land eligible for the 110 percent incentive, FSA offices shall contact County Planning departments to determine lands in the County designated according to RCW 36.70A.170. Assistance can also be obtained from:

CREP – Cost Share Policies and Rates

1 Use of This Exhibit

A Applicability

The policies in this Exhibit apply to all CREP cost sharing, FSA and State.

See WA Exhibit 29 for the State PIP Advance Loan procedure.

2 Rice Hulls

A Cost Share Eligibility

Rice hulls and other carriers are authorized for cost share under all seed components.

3 Seeding Rates

A Tolerance

NRCS specifications call for a specific number of pounds of seed per acre. However, the size of areas selected for enhancement, drill settings, field corners and other issues may make it difficult to meet the precise number of pounds. The STC and NRCS State Office have agreed to the following policy.

Policy: Final seeding rates within 10 percent, plus or minus, of the specified seeding rate, may be considered to meet specifications. In this case, all seed actually planted, up to 110 percent of the specified rate, is eligible for cost sharing.

Producers who seed less than 90 percent, or more than 110 percent, of the required seeding rate, must be reviewed by NRCS and the COC on a case by case basis. When less than 90 percent of the specified rate is used, the practice must generally be determined to not meet specifications. When more than 110 percent of the specified rate is used, seed in excess of 110 of the specified rate is generally not eligible for cost sharing, unless the COC and NRCS determine that conditions beyond the producers control existed, and the COC would have approved additional cost sharing originally, had these conditions been known.

Note: Cost sharing shall be limited to the minimum materials necessary to establish the practice.
CREP Cost Share Policies and Rates

4 Cost Sharing on Animal Damage Control Devices

A STC Policy

Cost sharing for tree shelters, netting, plastic tubes or other animal damage control devices is only authorized under this practice when both the following apply:

- the designated technical agency determines that the devices are needed for successful establishment of the trees/shrubs on the specific site
- the device required, rather than over-planting or another type of device, is the most cost-effective method of stand establishment.

Notes: Cost sharing under this policy is authorized for hardwoods, conifers and shrubs.

5 Special Components for Seedbed Preparation and Site Preparation

A *—SeedbedX for Seedbed Preparation

Cost sharing for seedbed preparation has been established as flat rates, currently components Seedbed15 and Seedbed16. These flat rates were established by reviewing several “typical” scenarios for seedbed preparation, and determining the cost of the tillage and/or pesticide operations in each. These were then averaged to arrive at the flat rate.

In a limited number of very unique circumstances, producers may be required to do substantially more field work or use more expensive herbicides, than were used to establish the current flat rates. COC’s can approve the use of component SeedbedX (where X is a sequential number assigned to the county’s component), in addition to Seedbed15 or Seedbed16, if all the following conditions are met:—*

- the COC determines that the participant must incur substantially more costs for seedbed preparation than those used to establish the flat rate because of the need for additional tillage operations, additional pesticide applications, or the use of a more expensive chemical
- the steps causing the substantially higher costs are required by, and included in, the conservation plan or supporting documents
- the steps causing the substantially higher costs are not the result of the producer’s failure to take appropriate actions on seedbed preparation.

Example: The producer failed to carry out the steps required in the original conservation plan, resulting in the need to conduct additional field operations to prepare a suitable seedbed. The additional operations resulted in increased costs. The producer is not eligible for cost sharing under component SeedbedX.
CREP Cost Share Policies and Rates

5 Special Components for Seedbed Preparation and Site Preparation (Continued)

A *--SeedbedX for Seedbed Preparation (Continued)

COCs can provide cost share under SeedbedX in addition to Seedbed15 or Seedbed16 if the criteria described above are met. Cost sharing under SeedbedX should only be for costs exceeding the rates used to establish Seedbed15 and Seedbed16 (costs exceeding $72 for Seedbed15 or $58 for Seedbed16).

Within CSS, counties can only establish one hold down for SeedbedX.

While the STC has not established the definition of a significant increase in operations or costs, it is anticipated that:

• SeedbedX will only be used when the increased operations and costs are substantial
• the use of SeedbedX will be very limited.

B SitePrepX for Site Preparation

Cost sharing under component SitePrepX (where X is a sequential number assigned to the county’s component) is not authorized in western Washington.

Cost sharing for site preparation for eastern Washington is currently limited to component SitePrep34, a flat rate for mechanical or chemical spot treatment. In a limited number of unique circumstances, producers may be required to do more field work or use more expensive materials, than were used to establish the current flat rate. COC’s can approve the use of component SitePrepX, in addition to SitePrep34, if all the following conditions are met:

• the COC determines that the participant must incur substantially more costs than would be covered by SitePrep34--*
• the steps causing the substantially higher costs are required by, and included in, the conservation plan or supporting documents
• the steps causing the substantially higher costs are not the result of the producer’s failure to take appropriate actions on site preparation.

Example: The producer failed to carry out the steps required in the original conservation plan, resulting in the need to conduct additional field operations to prepare the site. The additional operations resulted in increased costs. The producer would not be eligible for cost sharing under component SitePrepX.
CREP Cost Share Policies and Rates

5 Special Components for Seedbed Preparation and Site Preparation (Continued)

B *--SitePrepX for Site Preparation (Continued)

Within CSS, counties can only establish one holddown for SitePrepX.

While the STC has not established the definition of a significant increase in operations or materials costs, it is anticipated that:

• SitePrepX will only be used when the increased operations and costs are substantial

• the use of SitePrepX will be very limited.--*
CREP Cost Share Policies and Rates

6 Partial Payments

A Making Partial Payments

COC’s are authorized to issue cost share partial payments when:

• *--a component is completed on all acreage covered by FSA-848

• a component is completed on part of the acreage covered by an FSA-848

**Example:** The producer completes seeding on part of the acreage under an FSA-848, and the remaining acreage will not be seeded for several months.--*

• a seedbed preparation or site preparation component is partially completed, and both the following apply:

  • the partial payment is limited to 50 percent of the participant’s out-of-pocket expenses for herbicides, as documented by receipts
  • the partial payment is limited to less than the full component payment until the component is complete.

**Examples:** The participant purchases and applies herbicides as part of the seedbed preparation component. The COC may authorize a partial payment up to 50 percent of the chemical cost, provided the payment amount is less than the full component amount.

The participant completes half the tillage operation for a seedbed or site preparation, but no herbicides have been applied. Since no chemical costs were incurred, a partial payment is not authorized.

**Note:** Partial payments are not authorized for the purchase of any material, such as seed or chemicals, until it is applied to the land.
Cost Share Policies and Rates for CRP

7 Conversion to New Component Codes with Cost Share Software (CSS)

A New Codes

*--With the conversion to the CSS system, all cost share components previously established for AD-245 software were revised. Component codes in the AD-245 system were limited to 5 characters. CSS allows a longer, more descriptive name that hopefully will be clearer to staff and producers. For example old component CA20 for post-plant weed control with herbicides is not WeedCntrl20.

To assist counties in converting to the new component codes, the component descriptions provided in the following pages and CSS end with the old component code in parenthesis. In addition, a listing of component codes is available on the State Share Point site under Farm Programs, CRP, Shared Documents, Cost Share Guidance, Authorized Components. The spreadsheet provides lists of all currently authorized components sorted by old code and new code, as well as a list of county specific components.

B County Specific Components

Certain components are established as “50% of the actual cost not to exceed an amount established by the COC.” An example is the Fence component. The State Office must load these components in Program Provisioning (PP) for each separate rate. These components are then approved specifically for the county(ies) using that rate.

Example: County A establishes a cost share holddown of $2/foot for fence and County B established a holddown of $3/foot. County A would be assigned component Fence1 and County B component Fence 2.

In the following pages county specific codes end with “X” which will be changed to the assigned number when the component is established in PP. To request a county specific component, County Offices must use the “Request for Components” spreadsheet located on the State Share Point as the location described in subparagraph A. The approved code will be provided when spreadsheet is returned to the county. It can then be copied from PP to CSS.--*

CREP – Calculating and Reporting State Cost Share Payment and PIP Loan Amount

A Cost Share Payments

*--For CREP cost sharing, FSA will take the following actions after the participant reports completion or partial completion of the practice on form FSA-848B, Cost-Share Performance Certification And Payment, and submits receipts and other supporting documentation:

- determine the total costs eligible for cost sharing
- determine and issue the FSA 50 percent cost share payment
- determine and record the State’s 10 percent cost share payment by:
  - multiplying the FSA cost share payment by 0.2
  - entering “WA State C/S” and the State cost share amount above item 18D, Current Amount Earned, on Page 3 of the FSA-848B
- if applicable, determine and record the State’s 40 percent PIP Advance Loan amount by:
  - multiplying the FSA cost share by 0.8
  - entering “PIP Loan” and the amount above item 18D on Page 3 of the FSA-848B
- forward a copy of the completed FSA-848B to the applicable Conservation District.

Example: FSA determines the total eligible costs for establishing a CREP practice is $10,000, and a CCC cost share payment of $5,000. The State 10 percent cost share payment is $1,000 ($5,000 X 0.2) and the PIP Advance Loan amount, if applicable, is $4,000 ($5,000 X 0.8).

FSA issues a CCC payment of $5,000 to the participant. FSA enters “WA State C/S $1,000” and “PIP Loan $4,000” above item 18D on Page 3 of the FSA-848B.--*
CREP – Calculating and Reporting State Cost Share Payment and PIP Loan Amount

B Unusual Circumstances

There may be circumstances where the State cost sharing is more than just the standard 10 percent. Examples include:

- plastic mulch in areas with more than 25 inches of annual rainfall, where the State will pay 100 percent cost sharing because FSA cost sharing is not authorized
- replanting failed stands, where state cost sharing will equal 50 percent because a FSA PIP payment is not authorized on replants.

*--In these circumstances, record “WA State C/S” and the amount on the FSA-848B, but include an explanation why the cost share exceeds 10 percent of the eligible costs.

C Conservation District Action

Following receipt of the FSA-848B from FSA, the Conservation District will:

- voucher the Conservation Commission for the State’s cost share amount, and if applicable, the PIP Advance Loan amount, using FSA-848B
- issue the State’s cost share payment and PIP Loan amount to the participant(s) upon receipt of funds.

D Example

An example of an FSA-848B, Page 3 showing State Cost Sharing is shown on the following page.--*

### WA State C/S
- $1,000

### PIP Loan
- $4,000
Designation of Eligible Stream Segments for CREP Eligibility

A Criteria for Identifying Eligible Streams

The CREP Agreement provides that only land along approved streams is eligible for enrollment. The designation of eligible stream segments must be approved by the FSA State Committee and Washington Conservation Commission. Approved streams will be documented in a GIS data base maintained by the Washington Conservation Commission. Copies will be provided to FSA for distribution by the GIS Specialist.

Eligible stream segments will be those where riparian habitat is a significant limiting factor for salmonids. In accordance with the Washington CREP Agreement, eligible stream miles cannot exceed 10,000 miles.

Stream designations will be based on one of the following:

- The **1993 Salmon and Steelhead Stock Inventory Report (SASSI)** or updates to SASSI maps carried out by local conservation districts with the concurrence of Washington Department of Fish and Wildlife (WDFW) and Tribal fisheries biologists. Regular updates to SASSI carried out by WDFW can also be used to identify eligible lands.
- The **Habitat Limiting Factors Analyses** carried out by the Washington Conservation Commission under House Bill 2496. These Habitat Limiting Factors Analyses identify the known and presumed distribution of salmonids and the salmonid habitat in need of restoration. The Analyses are being completed by the Commission’s Regional Technical Coordinators.
- The **Salmon and Steelhead Habitat Inventory and Assessment Project (SSHIAP)**. This is a GIS-based inventory of salmonid habitat conditions throughout WRIAs 1-23, and ultimately throughout the state.
- In cases where SASSI, SASSI updates, Habitat Limiting Factors Analysis or SSHIAP have not been completed, eligible streams may be designated if the conservation district, WDFW, and Tribal biologists all agree riparian habitat is a significant limiting factor for salmonids. The criteria for these updates will include all streams in watersheds with known presence of SASSI stocks that are below natural barriers to fish passage and meet appropriate habitat requirements for the species of interest (e.g. gradient < 12%).
Designation of Eligible Stream Segments for CREP Eligibility

B  Nominating Stream Segments for Approval

The following actions must be taken to nominate a stream segment which is currently not approved.

Step 1: The Conservation District should consult with Washington Department of Fish and Wildlife’s (WDFW) regional offices and each of the affected Tribes. Representatives from WDFW and the Tribes, along with other fisheries experts, can provide guidance on where a lack of riparian habitat is a limiting factor for salmon and steelhead. FSA and NRCS should be consulted also, particularly to confirm if there is agricultural land in the area.

Step 2: Stream segments not currently designated for CREP, where there is a salmonid presence, or a high potential for presence, can be identified for possible nomination for CREP. The intent of the Washington CREP is to address ESA salmonids listings, and potential salmonids listings, on agriculture. Stream designations should be limited to streams where a significant portion of the lands along the stream are agricultural lands that meet basic CRP eligibility criteria.

Step 3: Using the criteria in subparagraph A, the parties consulted in step 1 should identify those stream segments where riparian habitat is a significant limiting factor for salmonids.

Step 4: Develop a written justification for each nominated stream segment, identifying the criteria from subparagraph A used, those features of the current riparian habitats that are limiting for salmonids and the likelihood of enrollment.

Step 5: Obtain the concurrence of the designation from the FSA County Committee.

Step 6: Submit the designated stream segments, along with the justification, and an indication of the County Committee concurrence, to the Conservation Commission.

Step 7: The Washington CREP Coordinator will submit the nominations to the Conservation Commission and FSA State Committee for approval or disapproval. Because the CREP Agreement limits total eligible stream miles to 10,000 miles, nominations for additional stream segments will generally only be acted on once each year. Nominations must be submitted to the Conservation Commission no later than October 31, and approvals or disapprovals will be issued no later by December 31.

Step 8: Approved stream segments will be added to the GIS data base by the Conservation Commission, with a copy provided to the FSA GIS Specialist for distribution to Service Center servers.
CREP – Washington State PIP Advance Loan

1 Applicability

A PIP Advance Loans

The FSA Practice Incentive Payment (PIP) described in subparagraph 101 B can not be issued until the entire practice under the CRP-1 is completed. In the case of CREP buffers, this can leave the participant responsible for substantial costs during the 1-3 years it takes to install the riparian buffer. Washington State has agreed to issue PIP Advance Loans to help alleviate the financial problems caused by the delay in issuing the FSA PIP.

The PIP Advance Loan will:

• be calculated the same as an FSA PIP
• be issued when cost share partial payments are issued
• have a zero percent interest rate
• have a maximum loan period of 3 years
• be repaid by the assignment of the participant’s PIP, and if necessary, annual rental payments
• be available after the applicable Conservation District has entered into a contract with the Washington Conservation Commission, authorizing the program
• be available after the participant has an approved Promissory Note and Security Agreement with the Conservation District and the Conservation Commission
• be available on a voluntary basis, at the participant’s discretion.

2 Processing Promissory Note and Security Agreement

A Timing

If participants wish to apply for the PIP Advance Loan, a Promissory Note and Security Agreement (Note) must be executed and approved. The Note should be processed when the first cost sharing partial payments are to be issued for the contract. FSA will provide the State cost share amount and PIP Advance Loan amount on form FSA-848B, Page 3. --*
2 Processing Promissory Note and Security Agreement (Continued)

B Processing Note

The Promissory Note and Security Agreement (Note) will be completed by the Conservation District and borrower. All participants who contribute to the cost of the buffer establishment can obtain a loan. Husbands and wives can obtain a joint loan. In all other cases, separate participants who contribute to the cost of the buffer must obtain separate loans. The Note must be approved by the Conservation District at a board meeting, and the Conservation Commission. The Note will not be approved by the Conservation Commission until:

- the FSA assignment form CCC-36 has been completed and filed with FSA, and the Conservation Commission has a copy.
- the cost share partial payment is approved and the PIP Advance Loan amount is determined *--on the form FSA-848B.--*

See subparagraph 2 E for instructions for completing the Promissory Note and Security Agreement.

C Loan Period

Conservation Commission policy prohibits the loan period from exceeding 3 years. Applicants must be advised that the loan will become due and payable 3 years after the date that the Borrower signs the Promissory Note and Security Agreement (Note), even if the FSA PIP payment will not be issued by then.

Notes: The 3-year loan period limit begins when the Borrower signs the Note.

CRP/CREP procedure requires the cover to be initially planted within 12 months of the contract effective date. The Technical Agency can grant a second 12 months, with COC concurrence, and the COC can grant a third 12 months for a total of 36 months. The COC has no authority to grant extensions beyond 36 months from the contract effective date.

D Amending Promissory Note and Security Agreement

When the first loan advance is issued, this amount will be recorded on the Promissory Note and Security Agreement. Before subsequent loan advances may be issued, the loan document must be amended to reflect the new amount. The Promissory Note and Security Agreement Amendment form must be signed by the Borrower, and approved by the Conservation District Board and the Conservation Commission.

This AGREEMENT constitutes an integrated document between ____________________________________________ (Borrower) and the ____________________________________________ Conservation District (District) which is acting as loan agent under a Conservation Reserve Enhancement Program (CREP) Practice Incentive Payment (PIP) Advance Payment Loan Agreement with the Washington State Conservation Commission (Commission).

As the loan agent, the District will oversee completion of, and amendments to, the Promissory Note & Security Agreement and the Farm Services Agency Assignment of Pay forms, will maintain current District PIP Advance Loan files, will voucher the Commission for PIP advances, and will issue PIP Advance checks to landowners.

The CREP is a partnership between the State of Washington and the U. S. Department of Agriculture, Farm Services Agency (FSA) that provides financial incentives to landowners who restore and improve salmon and steelhead habitat on their land. This document includes a Promissory Note, Security Agreement and related provisions for the advancement of PIP monies to the Borrower under the CREP Program as more fully set forth below.

Recitals

WHEREAS (1), landowners participating in CREP are eligible to receive a federal PIP equal to 40% of the eligible costs for establishing riparian buffer cover for salmonid habitat. However, the federal PIP is issued to participating landowners only after riparian cover establishment is completed, which may take up to three years. Some landowners who wish to take advantage of the CREP program may not be in a financial position to install and pay for riparian habitat work up front, then wait for PIP reimbursement from the FSA until plantings are considered established by the District when it issues the Certification of Practice Completion.
WHEREAS (2), the Commission is making available a part of its CREP financial assistance grant funding through conservation districts to landowners to install riparian buffers prior to receiving their federal Practice Incentive Payment. These advances will be made at zero percent interest, and will extend until the riparian buffer is considered established by the District when it issues the Certification of Practice Completion, but no longer than three years from the date the loan is issued to the borrower.

WHEREAS (3), in order to promote maximum PIP Advance Program accountability, repayment of the loan issued under this agreement to participating landowners will be made directly to the Commission. WHEREAS (4), the Borrower has indicated to the District that they are interested in participating in the PIP Advance Payment Loan Program, and has agreed to assign the Practice Incentive Payment the borrower will receive upon District certification of the riparian buffer from the Farm Services Agency to the Washington State Conservation Commission as repayment of the advance made by the Commission to the borrower through the ______________ Conservation District as the loan agent.

WHEREAS (5), the Commission, as provider of the PIP Advance Loan Program funds through its CREP financial assistance grant funding, and as Program Administrator, shall review, approve and sign each agreement between a District and a borrower. The Commission may, in its discretion, decline to approve any agreement made pursuant to this Program.

NOW, THEREFORE, the parties hereby agree as follows:

PROMISSORY NOTE

The undersigned Borrower(s) jointly and severally promise to pay to the order of the Washington State Conservation Commission the principal amount $________________________ on or before __________________________(date).

Oral agreements or oral commitments to loan money, extend credit, or to forbear from enforcing repayment of a debt are not enforceable under Washington State law.

This Note and Security Agreement are to be read and interpreted together as one Agreement, and the terms of each are incorporated into the other. Any default of either the Note or the Security Agreement shall be deemed to be a default under both the Note and the Security Agreement. The undersigned Borrower hereby represents and warrants that all proceeds from this Note will be used for the purposes allowed under the PIP Advancement Payment Program only.

CREATION OF SECURITY INTEREST, PLEDGE AND ASSIGNMENT

In consideration of the financial and other accommodations given, or to be given, under the Washington State Conservation Commission’s PIP Advance Payment Program to the undersigned Borrowers as evidenced by the Note set forth above, the Borrower hereby grants, assigns and pledges the assignment of their Practice Incentive Payment the Borrower is to receive from the Farm Services Agency to the Washington State Conservation Commission. The completed U.S. Department of Agriculture Commodity Credit Corporation Assignment of Payment form is included as Attachment 1.
In the event that the PIP Assignment of Payment does not fully repay the debt, the obligation remains for the Borrower to pay the remaining balance of the debt to the Commission.

This Security Agreement, Pledge and Assignment is given to secure the payment and performance of all indebtedness and obligations of Borrower under the PIP Advancement Payment Program, including funds disbursed after the date of this agreement.

**BORROWER REPRESENTS, WARRANTS AND AGREES AS FOLLOWS**

This Promissory Note and Security Agreement, including Attachment #1, Assignment of Payment, constitute the entire understanding between the parties. No modification by any holder hereof shall be binding unless in writing; and any modification on any one occasion shall not be a modification or create an expectation for modifications for any other or future occasion.

Upon default hereunder (whether by failure to pay promptly any indebtedness or installment thereof, or to perform any covenants or agreements herein contained), or if any of the Borrower’s representations or warranties herein are false, or upon death, bankruptcy, insolvency, or incompetency of the Borrower, the District may declare the entire indebtedness secured hereby immediately due and payable. Upon such declaration by the District, the District, as the loan agent for the Commission, shall assign the secured debt to the Commission.

The above provisions have been read and considered by the undersigned. It is agreed that by signing this Promissory Note and Security Agreement, they make the representations, warranties, and agree to all the terms and conditions specified.

Instructions: Installation and reimbursement of CREP practices in stages may lead to PIP advance increases for individual Borrowers. Each time the PIP Advance Amount is increased, an Amendment must be made to the Promissory Note & Security Agreement.

To Borrower -- To request an amendment to your Loan Contract, complete the top portion of this form and submit it to the Conservation District office. You will receive a written response back from the Conservation Commission either approving or denying the request.

To Conservation District – After your board either approves or denies this request; send a signed copy to the Conservation Commission, Attn: Cheryl. After review, the Commission will notify the Borrower and the District in writing on the status of the Amendment Request.

Conservation District Authorized Signature __________________________ Date __________________________

Conservation Commission Authorized Signature __________________________ Date __________________________
3 Assigning CREP Payments to the Conservation Commission to Satisfy PIP Advance Loan

A 63-FI Procedure

FSA Offices shall follow the assignment procedure in Handbook 63-FI. The guidance in this paragraph supplements procedure in that Handbook.

B Who Should Sign

Because FSA PIP’s are divided among all signatories to the CRP-1 with a share greater than zero, all these parties must complete a CCC-36 Assignment of Payment, as described in this paragraph, so that the entire FSA PIP will be assigned to repay the PIP Advance Loan.

C Payments to Assign

FSA PIP payments must be assigned to repay PIP Advance Loans. In most cases, the PIP assignment will be adequate to repay the loan. However, if a participant’s FSA PIP is limited due to payment limitation or FSA or other U.S. Government debt, the FSA PIP alone may not be sufficient. Consequently, a separate assignment for the CREP annual rental payments shall also be executed at the time the PIP assignment is generated, but it will be retained in the Conservation Commission Borrower’s loan file, and not submitted to FSA, until it is determined the FSA PIP assignment will not be adequate to pay the PIP Advance Loan.

D When Assignment is to be Filed

The CCC-36 for the FSA PIP must be filed with FSA and a copy sent to the Conservation Commission before the Promissory Note & Security Agreement will be approved.

The CCC-36 for CREP annual rental payments will also be completed by the participants before the Promissory Note and Security Agreement is approved. The Conservation Commission will retain this assignment in the Borrower’s loan file and only submit it to FSA for recording if it is determined the FSA PIP assignment will not be adequate to repay the PIP Advance Loan. If the loan is repaid by the FSA PIP assignment or other means, the CCC-36 for annual rental payments will be discarded.
3 Assigning CREP Payments to Satisfy PIP Advance Loan (Continued)

E Limitation of Two Assignments Per Code

Handbook 63-FI and clarifications from the National Office provide that FSA will accept no more than two assignments per program code. This means that no more than two assignments per program code may be accepted for all of a participant’s CRP and CREP contracts. In deciding whether to approve a PIP Advance Loan, the Conservation Commission must verify with FSA if the participants already have any assignments on file for the applicable code.

The PIP program code (XXCRPPRI) starts with the last two digits of the contract’s program year. Each separate year will be considered separate codes.

Example: Producer A has a 2001 and a 2002 CREP contract. He could file two assignments for each program code, 01CRPPRI and 02CRPPRI. Both assignments could be done on one CCC-36.

F Amount to Assign

The amount assigned, entered in block 3 of the CCC-36, should equal the estimated FSA PIP amount. This amount should be entered on both CCC-36’s for the FSA PIP and annual rental payments. The PIP Advance Loan amount will generally not reach this amount. Loan funds will only be issued to correspond with cost share partial payments. When final performance is reported, and determined to meet specifications, the final FSA PIP amount can be determined and issued, and no additional loan funds will be needed.

Example: Total estimated installation costs are $10,000. The estimated PIP amount is $4,000, which is entered on the CCC-36. The producer submits $5,000 in eligible costs and requests a partial payment. The participant will be issued FSA cost shares of $2,500, State cost shares of $500 and a PIP Advance Loan of $2,000. Later, the producer reports final performance, and submits an additional $5,000 in eligible costs. The participant will receive another $2,500 in FSA cost, $500 in State cost share, and a PIP of $4,000. Since the loan amount is $2,000, this amount of the PIP will be issued to the Conservation Commission and the balance issued to the producer.

Note: If the originally assigned amount is later determined to be too low to cover the amount to be disbursed under the PIP Advance Loan, the Conservation Commission and participants must revise the CCC-36 assignment form by entering an updated estimate in item 3, and initialing and date the entry.
### 3 Assigning CREP Payments to Satisfy PIP Advance Loan (Continued)

#### G Instructions to Complete CCC-36

Complete CCC-36 for assignments to cover PIP Advance Loans according to this table.

   Attn: Cheryl Witt  
   P. O. Box 47721  
   Olympia, WA  98504-7721 |
| 7    | 91-1214646 |
| 8    | NA |
| 9    | NA for PIP. For rental payment assignment, enter all years of the contract. |
| 10   | NA |
| 11   | NA for rental payments. For PIP assignment, enter “CREP PIP” and the applicable program code, for example 01CRPPRI. |

**Notes:** The FSA PIP payment code is the program year of the contract, which is the fiscal year it begins to accrue annual rental payment, not the fiscal year the PIP is actually issued. The correct program year and code must be used for the assignment software to recognize the payment.

If a producer has CREP contracts with more than one program year, for example 01CRPPRI and 02CRPPRI, both may be entered on the same CCC-36. Use separate lines for each program year.

4 Disbursing PIP Advance Loan Funds

A Timing

PIP Advance Loan funds will be disbursed when cost share partial payments are authorized. The amount advanced will be the PIP amount corresponding to the cost share partial payment amount.

B Loan Amount

The amount of each loan advance will be calculated the same as a PIP, as provided in subparagraph 101 B of 2-CRP.

Example: A participant submits $5,000 in total eligible costs after site preparation is completed. FSA determines an FSA cost share of $2,500. The PIP loan advance will be calculated as $2,500 X 0.80 = $2,000. The producer would receive $2,500 in FSA cost sharing, $500 in State cost sharing and $2,000 as a PIP Advance Loan.

C Recording Loan Amount

The PIP Advance Loan amount will be determined by FSA and recorded on the AD-245, Request for Cost Sharing, when partial payments are approved. The loan advance amount will be recorded in the Net Payment block of the AD-245, and identified as “PIP Loan”.

The Conservation District will record the loan amount on a Record of PIP Advance Loan Disbursements form. This form will be provided to the Conservation Commission, along with the AD-245, indicating the PIP Loan amount, to voucher the State for loan funds.

The Conservation Commission will maintain the master Schedule of Advances and Repayment form, Exhibit A of the PIP Advance Loan Agreement, and provide an updated copy to the District in the form of a Unilateral Amendment each time a disbursement can be issued.

Payment requests submitted to the Conservation Commission for the State 10 percent cost share and for the PIP Advance Loans must be done on separate Invoice Vouchers.

See subparagraph E for an example Record of PIP Advance Loan Disbursements form.
4 Disbursing PIP Advance Loan Funds, Continued

D Review of CRP/CREP Payment Limitation

The FSA PIP payment, Signing Incentive Payment (CRP-SIP) and annual rental payments are subject to the CRP/CREP payment limitation of $50,000 per person per fiscal year. Before disbursing PIP Advance Loan funds, the Conservation Commission will consult with FSA to ensure, based on the information available at that time, if the PIP payments will be impacted by the payment limitation. The cumulative PIP Advance Loan amount shall not exceed the FSA PIP amount the producer could earn at the time of disbursement.

Example: Producer A has enrolled land CRP and CREP, with total annual rental payments of $20,000. The producer’s cumulative PIP Advance Loan disbursements will be limited to $30,000.

E Record of PIP Advance Loan Disbursements

An example of the Record of PIP Advance Loan Disbursements form is provided on the following page. Reproduce locally.

Comments:

5-18-11  2-CRP (Rev. 5) WA Amend. 1
CREP – Washington State PIP Advance Loan

5 Repaying the PIP Advance Loan with the Assigned FSA PIP Payment

A Issuing FSA PIP

The outstanding loan amount will generally be less than the FSA PIP amount since the loan will only be based on partial payments. The assignment amount entered on the CCC-36 will also generally be more than the outstanding loan amount. FSA must always confirm the current loan amount with the Conservation Commission before issuing the FSA PIP.

The Conservation Commission must provide written authorization to reduce the assignment amount to the outstanding PIP Advance Loan balance.

Although the PIP Advance Loan proceeds will be disbursed to participants by Conservation Districts, the assignment will be made, and the payment will be issued, to the Washington Conservation Commission.

All payments issued to the Commission will be issued as paper checks. The Commission cannot receive direct deposits since they do not have a bank account.

B Closing Out the Loan and Assignment

If the FSA PIP assignment is sufficient, and the loan is paid off, the Promissory Note and Security Agreement should be marked “Paid” and a copy provided to:

- the borrowers
- the Conservation District.

If the loan is not paid off by the FSA PIP payment, the Conservation Commission should:

- notify the borrower of the remaining balance and final due date
- notify the Conservation District
- file the assignment of annual rental payments for the remaining balance, covered in subparagraph 3 C above, with FSA
- contact the Conservation Commission for guidance on collecting the outstanding balance.
CREP – Guidance from CREP Biological Opinion (BO)

1 Need for CREP BO

A Background

Because CREP impacts species listed under the Endangered Species Act (ESA), FSA was required to submit a Biological Assessment to the National Marine Fisheries Service (NMFS) and U.S. Fish and Wildlife Service (USFWS). The Assessment provided a summary of CREP, and the Agency’s assessment of its impacts on listed species.

NMFS and USFWS responded by providing FSA with a Biological Opinion (BO) (WSB 99-462, dated November 16, 2000). The BO provides NMFS’s and USFWS’s evaluation of the program’s impacts, and steps required by FSA, NRCS, Conservation Districts and program participants to minimize or eliminate any adverse impacts that might occur to listed species during program implementation. Compliance with the provisions of the BO is required by all these parties.

B BO Provisions

The following pages provide the provisions of the BO that FSA, NRCS and CD employees must know and use when implementing CREP. They are:

- Required Best Management Practices to be carried out by participants (located on BO pages 12-15).
- Reasonable and Prudent Measures and associated Terms and Conditions (located on BO pages 81-85).

FSA is the lead USDA Agency for CREP and is responsible to ensure that CREP activities are implemented in accordance with the BO.

NRCS and the Conservation Districts are responsible to ensure that conservation planning, design and implementation activities are conducted in accordance with the BO.

Important: It is imperative that anyone providing technical assistance to producers who have applied for CREP be familiar with the requirement of the BO.

CREP participants should be provided a copy of this Exhibit so they are aware of the BO requirements and their impact on riparian buffer installation.
Best Management Practices

Best management practices (BMPs) are designed to reduce adverse environmental impacts resulting from the installation of CREP practices. The Services consider these BMPs to be part of the CREP action. For the analysis presented in this BO, the Services assume that these BMPs will be binding requirements within each contract. Consequently, the following BMPs will be required of all farmers and ranchers who enroll in the program.

1. All terms and conditions in regulatory permits and other official project authorizations to eliminate or reduce adverse impacts to any endangered or threatened species or their critical habitats will be followed.

2. Restoration activities at individual project sites will be completed in an expeditious manner. In addition, appropriate work timing windows will be used to reduce disturbance and/or displacement of fish and wildlife species in the immediate project area.

3. Vehicular access ways to project sites must minimize impacts on riparian corridors.

4. Use of heavy equipment and techniques that will result in soil disturbance or compaction of soils, especially on steep or unstable slopes, will be minimized.

5. Vehicles will not enter or cross streams except in cases where no alternative exists. Where stream crossings are required, the number of crossings will be minimized. Vehicles and machinery will cross streams at right angles to the main channel whenever possible. Any stream crossings will be consistent with WDFW hydraulic code instream operating restrictions.

6. Staging and refueling areas will be located outside of the riparian area and away from water sources/drainages to prevent potential contamination of any waterbody.

7. There will be no instream work except for installation of livestock crossings and installation of offstream livestock watering facilities. Bank shaping will be done from the top of the bank.

8. Vegetative planting techniques must not cause major disturbances to soils and slopes. Hand planting is the preferred technique for all planting. Plantings will occur during the appropriate seasonal period for the respective plant species involved.

9. The evaluation of herbicide use will include the accuracy of applications, effects on target and non-target species, and the potential impacts to aquatic and terrestrial ecosystems. All chemical applications will follow label instructions as well as adhere to the guidance in 10 and 11 below. Projects specifications, to be developed by qualified agency personnel, will fully address timing, rate of application and application methodology.
CREP – Guidance from CREP Biological Opinion (BO)

10. Since the use of herbicides to establish riparian vegetation may require application distances closer to the streams than is recommended by the manufacturer on the product labels, the following prioritization shall be given for the seven chemicals requested for use under the CREP program in order to minimize impacts to both aquatic and terrestrial organisms:

   1. Glyphosate - formulation in Rodeo, rather than Roundup
      Triclopyr - using formulations in Crossbow or Garlon 3A, rather than Garlon 4
   
   2. Sulfometuron-methyl (trade name Oust)
      Oxyflourfen (trade name Goal)
      2,4-D (amine, or salt formulation)

   The following chemicals are known to be toxic to fish, amphibians, and/or migratory birds or are currently under investigation. These chemicals should only be used if no other control mechanisms exist:

   Atrazine and Hexazinone, both Triazine derivatives

11. Chemicals shall be applied by hand, using backpack or small vehicle-mounted sprayers (ATV or pickup). There shall be no aerial application of chemicals.

12. Sedimentation and erosion controls will be implemented on all project sites where the implementation of restoration activities has the potential to deposit sediment into a stream or waterbody. Control structures/techniques may include, but are not limited to, silt fences, straw bale structures, seeding by hand and hydro-seeding, jutte mats, and coconut logs. Grading and shaping will generally restore natural topography and hydrology.

13. Stream bank shaping will only be implemented where stream bank stability is extremely poor or where necessary to restore riparian functions. Stream bank modification for planting purposes will be thoroughly documented, and on each CREP contract where more than 30 linear feet of stream bank is shaped by mechanical equipment, USDA will consult with the Services. Design of all stream bank modification projects will recognize the important wildlife values provided along naturally eroding outside meander curves. Any soil control structures will be bio-engineered to the extent possible. No rip rap will be used under this program for stream bank stabilization. No stream bank stabilization activity will reduce natural stream functions or floodplain connection.

14. Qualified agency personnel will develop plant specifications detailing seedlings, sources for seed, handling of plant material, and planting techniques. Seedling competition will be reduced by controlling grasses, forbs, and undesirable woody shrubs (non-native) from around each seedling for an appropriate distance. Proper methods to protect seedlings from animal, insect, and environmental damage will be employed.
15. Fence designs (e.g., wire type and wire spacing) will be in accord with NRCS standards. Fencing projects on Puget Island, the Hunting Islands, Price Island, and 2 miles inland from the Columbia River between 2 miles east of Cathlament and 2 miles west of Skamokawa Creek in Wahkiakum County will use only 3-strand barbed wire to minimize impacts to Columbian white-tailed deer and their movements.

16. Off-channel livestock watering facilities will not be located in areas where compaction and/or damage could occur to sensitive soils, slopes, or vegetation due to congregating livestock. Livestock stream crossings will only be constructed on small streams. Crossings will not be placed on the mid- to downstream end of gravel point bars. Crossings will generally be 30 feet or less in width. Any culverts constructed for livestock crossing purposes will meet NMFS guidelines. Livestock fords across streams will be appropriately rocked to stabilize soils/slopes and prevent erosion. Fords will be placed on bedrock or stable substrates whenever possible.

17. Native vegetation will be used. Where use of native vegetation is not feasible, similar species which are functional equivalents and known not to be aggressive colonizers may be substituted. Hybrid cottonwoods are not approved for use in this program.

18. For any project within ¼ mile non-line-of-sight or ½ mile line-of-sight of an eagle nest identified by WDFW, no activities producing noise above ambient levels will occur at the site from January 1 to August 31. If a proposed activity is near a bald eagle nest and must occur during this restricted period, site-specific consultation with USFWS will be initiated to evaluate the potential for adverse effects.

19. Survey data from USFWS and Washington Natural Heritage Inventory will be used to identify potential locations where listed and proposed plant species (see Table 2) may be located along stream corridors within the project area. Where required, surveys by trained personnel will be conducted for the presence of these species. Any locations of these plants identified in a survey will be avoided through redesign of the project as necessary.

20. Restoration activities on Puget Island, the Hunting Islands, Price Island, and 2 miles inland from the Columbia River between 2 miles east of Cathlament and 2 miles west of Skamokawa Creek in Wahkiakum County will not occur from June 1 to June 30, to avoid and minimize impacts to Columbian white-tailed deer during the fawning season.

Note: The USFWS has been able to further refine the soils data provided during informal consultation and development of the FSA's biological assessment. However, additional refinement of the soil types or series on which all CREP projects will require botanical surveys cannot be completed until additional data are made available on the NRCS SSURGO database. Once the relevant data are made available, the USFWS will work with FSA and NRCS to further reduce the required level of survey effort by developing more refined plant/soil associations.

**Reasonable and prudent measures**

The measures described below are non-discretionary. They must be implemented as binding measures for the exemption in section 7(a) (2) to apply. The FSA has the continuing duty to regulate the activities covered in this incidental take statement. If the FSA fails to require the applicants to adhere to the terms and conditions of the incidental take statement through enforceable terms that are added to the permit or grant document, or fails to retain the oversight to ensure compliance with these terms and conditions, the protective coverage of section 7(a) (2) may lapse. The Services believe that activities carried out in a manner consistent with the BMPs and these Reasonable and Prudent Measures, except those otherwise identified, will not necessitate further site-specific consultation. Activities which differ from the BMPs or RPMs will require further consultation.

The Services believe that the following reasonable and prudent measures are necessary and appropriate to minimize the likelihood of take of listed fish resulting from implementation of the Washington CREP. Should additional habitat inhabited by listed species be designated as critical habitat, these reasonable and prudent measures would also minimize adverse effects to that habitat.
CREP – Guidance from CREP Biological Opinion (BO)

The FSA shall:

1. Ensure the development and implementation of a comprehensive monitoring program to assess the effectiveness of the CREP in meeting its objectives;

2. Avoid take of listed species in any restoration activities that are part of the Washington CREP;

3. Manage herbicides, pesticides and other chemicals as needed to ensure that no degradation of water quality, aquatic habitats and wetlands occurs in the activity area and downstream;

4. Locate, design and maintain livestock crossings or fords as necessary to minimize degradation of riparian and aquatic habitats in the activity area and downstream; and

5. Minimize take associated with instream work or ground-disturbing activities within the riparian zone proposed in the CREP BA (i.e., stream bank stabilization, site-preparation, off-channel livestock watering facilities, and livestock crossings) by applying appropriate timing restrictions.

Terms and conditions

In order to be exempt from the prohibitions of section 9 of the Act, the FSA must also comply with the following terms and conditions, which implement the reasonable and prudent measures. These terms and conditions are non-discretionary.

1. To implement Reasonable and Prudent Measure #1, above, the FSA shall:

Provide NMFS and USFWS with a yearly monitoring report describing the success with which the Washington CREP meets the program objectives. This report will include implementation and effectiveness monitoring components.

Implementation Monitoring: The annual implementation monitoring report shall focus on summarizing CREP enrollment, including: the level of program participation; the total acres and average widths enrolled in each of the component conservation practices; the total number of acres and distribution of successfully implemented conservation practices; a summary of non-Federal CREP program expenditures; and recommendations to improve the quality of the monitoring program. The Services are particularly interested in an accounting of CREP projects which include stream bank stabilization. For those projects, include the following information in the monitoring report: the number of such projects each year, the justification for the work, materials used, size of the project, whether one or both banks were stabilized, and a narrative assessment of each project’s effects on natural stream function.
CREP – Guidance from CREP Biological Opinion (BO)

Effectiveness Monitoring: This component of the annual report will assess habitat trends as a result of CREP participation, and will specifically focus on the six objectives of the Washington CREP as defined by FSA:

A. Ensure that 100 percent of the area enrolled for the riparian forest practice, are restored to a properly functioning condition in terms of distribution and growth of woody plant species.

B. Reduce sediment and nutrient pollution from agricultural lands adjacent to the riparian buffers by more than 50 percent.

C. Ensure that adequate vegetation is established on enrolled riparian areas to stabilize 90 percent of stream banks under normal (non-flood) water conditions.

D. Ensure that vegetation adequate to reduce the rate of stream water heating to ambient levels is achieved on all riparian buffer lands.

E. Provide a contributing mechanism for farmers and ranchers to meet the water quality requirements established by the Federal Water Pollution Control Act and Washington State’s Department of Ecology agricultural water quality laws.

F. Provide adequate riparian buffers on at least 2,700 miles of stream to permit natural restoration of stream hydraulic and geomorphic characteristics which meet the habitat requirements of salmon and trout.

The FSA shall ensure the design and implementation of a scientifically credible, statistically robust monitoring plan that focuses on the six objectives listed above. The CREP effectiveness monitoring program will use a standardized design and single set of protocols to facilitate data analysis and interpretation. This monitoring program may make use of existing monitoring efforts if those results do not violate the scientific or statistical credibility of the CREP monitoring program and can provide data specific to CREP objectives. FSA will develop this quantitative monitoring program in consultation with a biostatistician to ensure that the monitoring design and protocols will adequately assess CREP effectiveness in achieving its objectives.

The annual report shall be submitted to:

Stephen W. Landino, Branch Chief
National Marine Fisheries Service
510 Desmond Drive SE
Lacey, WA 98503

and

Gerry M. Jackson, Manager
U.S. Fish and Wildlife Service
Western Washington Office
510 Desmond Drive SE
Lacey, WA 98503
CREP – Guidance from CREP Biological Opinion (BO)

Implementation of a monitoring program will reduce take associated with CREP actions by ensuring that BMPs are carried out as stated in the BA and in this Biological Opinion. Implementation and effectiveness monitoring will determine whether BMPs provide the expected level of protection to listed species. If monitoring indicates that BMPs are not adequate to protect listed species, this information can be used as feedback to improve the program.

2. To implement Reasonable and Prudent Measure #2, above, the FSA shall:

Consult with field biologists from WDFW and the Services to review site-specific stream bank stabilization and livestock crossings that include the operation of heavy equipment and may contribute sediments to the stream or result in the damage of desirable riparian vegetation. All instream operations will require a hydraulics permit and must meet the state’s site-specific instream timing restrictions.

3. To implement Reasonable and Prudent Measure #3, above, the FSA shall:

Include the following terms and conditions in each project specification calling for pesticides or other chemical applications.

A. Few of the many registered pesticides have been subject to section 7 consultation under the Act. For some of those that have, the EPA has produced supplemental endangered species label guidelines. For all CREP projects, follow all EPA guidelines addressing threatened and endangered species (e.g., listed plants in Willapa Hills, Clark, and Okanogan counties).

C. When operating within 25 feet of water (including streams, ponds, seeps, springs, bogs, wetlands, standing water ponds, and riparian areas), applicators will conduct a special, site-specific evaluation and will follow the guidelines outlined in BMP #10 for the 7 chemicals used in the CREP program. These pesticides will be applied at the lowest application rate consistent with the intended purpose.

4. To implement Reasonable and Prudent Measure #4, above, the FSA shall:

Include the following terms and conditions in each project specification calling for livestock crossings or fords. Livestock crossings, or fords, are intended to provide a stabilized area to provide access across a riparian buffer and waterway for livestock and farm equipment.

A. Do not place crossings in areas where listed salmonids spawn or are suspected of spawning, or within a reasonable distance (e.g., 100 feet) upstream of such areas where impacts to spawning areas may occur.

B. Minimize the number of crossings.
CREP – Guidance from CREP Biological Opinion (BO)

C. Design and construct or improve essential crossings to accommodate reasonably foreseeable flood risks, including associated bedload and debris, and to prevent the diversion of stream flow out of the channel and down the road if there is crossing failure.

D. Stabilize bank cuts, if any, with vegetation and protect approaches and crossings with river rock (not crushed rock) when necessary to prevent erosion.

E. Ensure that livestock crossings in and of themselves do not create barriers to the passage of adult and juvenile fish.

5. To implement Reasonable and Prudent Measure #5, above, the FSA shall:

Implement instream work consistent with WDFW’s Hydraulic Code, available on the web in Gold and Fish - Guidelines for Timing of In-Water Work to Protect Fish and Wildlife Resources (see WDFW’s Web Page at www.wa.gov/wdfw/hab/goldfish/goldfish.htm - location and timing requirements section for the most current version of these guidelines).

The incidental take statement included in this Biological Opinion is limited to the Act. It does not constitute an exemption for non-listed migratory birds and bald and golden eagles from the prohibitions of take under the Migratory Bird Treaty Act of 1918, as amended (U.S.C. 703-712), or the Bald and Golden Eagle Protection Act of 1940, as amended (U.S.C. 668-668d), or any other Federal statutes.

The Services should be notified within three (3) working days upon locating a dead, injured, or sick endangered or threatened species specimen. Initial notification must be made to the nearest Fish and Wildlife Service Law Enforcement Office. Notification must include the date, time, precise location of the injured animal or carcass, and any other pertinent information. Care should be taken in handling sick or injured specimens to ensure effective treatment and care or the handling of dead specimens to preserve biological material in the best possible state for later analysis of cause of death. In conjunction with the care of sick or injured endangered and threatened species or preservation of biological materials from a dead animal, the finder has the responsibility to ensure that evidence associated with the specimen is not unnecessarily disturbed. Contact our Law Enforcement Office at (425) 883-8122 or the Western Washington Office at (360) 753-9440.
CREP Pest Management Guidance

1 Purpose

The purpose of this Exhibit is to clarify the policy and role of NRCS in pest management and to identify the minimum standards to be used by providers of conservation technical assistance associated with conservation planning that includes pest management, regardless of the program.

2 NRCS Roles in Pest Management

NRCS’ roles in pest management are:

- Evaluating risks associated with probable pest management recommendations.
- Developing appropriate mitigation alternatives to minimize environmental risks.
- Assisting clients to adopt Integrated Pest Management (IPM) that helps protect natural resources.
- Assisting clients to develop and implement an acceptable pest management component of their overall conservation plan.

It is not the intent of the NRCS policy to provide pesticide recommendations to producers that could include specific lists, rates, timing or label instructions. Specific recommendations on the use of pesticides must be provided by an individual who is licensed and authorized by the State of Washington.

3 Pest Management and CREP

Refer to WA Exhibit 30 for those portions of the CREP Biological Opinion addressing pesticides. All CREP participants should be provided a copy of Exhibit 30.

Herbicides used on lands enrolled in CREP must include the pest management practice (595) in the contract and comply with the terms and conditions in the Biological Opinion. All chemicals used must be evaluated using the Windows Pesticides Screening Tool (WIN-PST) and the resultant environmental risks must be mitigated if they are high or very high.

When developing CREP plans and the client decides to use chemicals to control pests, insure the client understands the risk assessment as well as the priorities and cautions mentioned in the Biological Opinion. This will insure the resultant CREP plan is sensitive to the use and effectiveness of pesticides in close proximity to water and aquatic organisms without adverse environmental affects.
Joint FSA/NRCS/WCC Guidance Clarifying Agency Roles for Cultural Resources on CRP/CREP

1 Background

The following guidance on addressing cultural resource issues on CRP, continuous CRP and CREP was provided in a joint FSA/NRCS/Washington Conservation Commission memo data September 4, 2003. The guidance is intended to assist field staff in identifying potential impacts of program participation on cultural resources and actions to prevent or minimize significant impacts.

2 Guidance

The purpose of this joint memorandum is to provide guidance to FSA, NRCS and CD employees working on CRP, CCRP and CREP projects with the presence of cultural resources on offered land.

FSA has the “lead agency” responsibility for cultural resources involving CRP, CREP and CCRP because they are providing financial assistance and have control of the outcome of the project. The lead agency status requires FSA to follow Section 106 of the National Historic Preservation Act for cultural resources including site investigations and consultations with the State Historic Preservation Officer (SHPO) and tribes.

NRCS is responsible for the technical adequacy of all conservation plans and contracts developed for CRP, CREP and CCRP. NRCS is also responsible for determining the absence or presence of cultural resources during preliminary planning of CRP, CREP and CCRP contracts. These findings are documented on the CPA-52 and forwarded to FSA.

Conservation Districts may be developing CRP, CCRP or CREP plans and contracts. All plans and contracts must meet NRCS policy and contain the appropriate cultural resources documentation on the CPA-52 before obtaining approval signatures from NRCS. Conservation Districts who are developing plans and contracts need to request cultural resources location data, locally, from NRCS. If there is an indication of a known cultural resources site, from the local field office data, then NRCS will request a detailed data report from the Area Cultural Resources Specialists.

NRCS is prohibited by agreement with the SHPO from sharing detailed cultural resources information from the known cultural resources site data base with CD’s or FSA. NRCS will however indicate the presence or absence of cultural resources on the CPA-52.
2 Guidance (Continued)

Should cultural resources be noted as present on Form CPA-52, FSA must forward the document to the FSA State Office. The information submitted should include a map of the site, a legal description down to at least the quarter section, and details about the proposed project (i.e., does it include fencing or livestock water developments, what type of site preparation is anticipated, what other site disturbances will be required). The State Office will contact the SHPO to determine what additional consultation may be required. Should the SHPO indicate a cultural resources survey is required; the County Office will be notified. FSA will then notify the producer of the requirement to obtain a cultural resources survey. Should the producer obtain this survey, FSA will review it along with consultation with the SHPO to determine what necessary mitigation or alternatives would be required in order to proceed with the project.

FSA has no funding available to pay for cultural resources surveys for CRP, CCRP or CREP. Producers must bear the expense of these surveys for CRP and CCRP. For CREP, the Conservation Commission will review the circumstances on a case by case basis and will provide funding for the survey where possible. Consequently, FSA should notify the local CD when a survey is required, prior to notifying the applicant. The CD will work with the Commission to determine if funding is available.

Questions concerning the contents of the memo should be directed to NRCS State Resource Conservationist or FSA State Environmental Coordinator or CRP Specialist.
Eligible State Acres for Wildlife Enhancement (SAFE) Enrollment

The following pages provide maps of the areas approved for Washington’s four SAFE program areas. Only land in these areas is eligible for enrollment under SAFE provisions.

To determine if land is actually in an eligible area, County Offices shall use the GIS TERRA tool.

The approved SAFE projects, effected counties and authorized acreages are:

<table>
<thead>
<tr>
<th>SAFE Project</th>
<th>Approved Counties</th>
<th>Authorized Enrollment</th>
</tr>
